Tyranna Resources' partner finds nine new mineralised shoots at Weednanna, Southern Australia

Tyranna Resources {ASX: TYX}

Tyranna Resources' Wilcherry Hill JV project partner, Alliance Resources has identified nine additional mineralised shoots based on historical drilling intercepts in an old database at the emerging Weednanna gold project, 120 km west of Whyalla in South Australia.

ASX-listed Tyranna Resources' Wilcherry Hill JV project partner, Alliance Resources has identified nine additional mineralised shoots based on historical drilling intercepts in an old database at the emerging Weednanna gold project, 120km west of Whyalla in South Australia.

Alliance unearthed 59 old drill intersections, all with gold results greater than 1 gram per tonne gold, whilst it was completing 3D modelling ahead of a maiden mineral resource estimate at Weednanna.

The results which date back to 1997, include some spectacular numbers from diamond drilling including 9 metres grading 25.1g/t gold from 7m down-hole, including 4m @ 53.9g/t gold from 10m down-hole.

Another 1998 diamond hole returned 7m @ 21.2g/t gold from 125m down-hole and a recent RC drill hole in the same gold shoot showed 13m @ 8.0g/t from 88m down-hole, including 3 metres at nearly an ounce to the tonne gold from 98m down-hole.
