Apollo also hold an NSR for the Roxgold (TSX: ROXG) Séguéla Gold Project, located in Côte d'Ivoire.

Apollo Consolidated – Lake
Rebecca drill rig

Apollo Consolidated Mining have published an updated company presentation

Apollo have published an updated company presentation showing their latest program for their Lake Rebecca Gold Project located in Western Australia, close to Kalgoorlie.

[Apollo Consolidated Ltd](#) is an ASX listed gold exploration company and is focused on discovering multiple ounce gold

deposits in its projects located in Western Australia, where their Rebecca project is developing into an important discovery, and surrounding areas also hold great potential.

Apollo already have over 1 million ounces gold in resources, with the majority in the indicated category.

Apollo are very well funded, holding around A\$20 million in the bank at the end of June 2020, and are currently executing an RC drill program at their Lake Rebecca project area, targeting the Duchess deposit.

Duchess is located 4 KM south of the Rebecca deposit, and includes several west-dipping structures with disseminated sulphide and alteration. So far, drilling is progressing well, and a number of significant intercepts have been highlighted. Significant results include 7 m of 3.90 g/t gold from 151 metres outside the mineral resource model, nine metres at 3.15 g/t gold from 86 metres. These bode well for adding significant ounces in the future if the current trend continues.

AOP also hold a 1.2% NSR over the Séguéla Gold Project, located in Côte d'Ivoire, being developed by TSX listed [Roxgold \(TSX: ROXG\)](#).
