

Barton Gold Reports Broad, High-Grade Assays at 'S1' Pit Area

Barton Gold (ASX: BGD)

Announced first assay results from recent drilling at its South Australian Tunkillia Gold Project.

These assays confirm broad new intervals of high-grade gold mineralisation which infill the central portion of Tunkillia's S1 'Starter Pit', emphasising the high-value nature of this zone.

Barton Gold Reports Broad, High-Grade Assays Infill Tunkillia 'S1' Pit Area

Results emphasise Tunkillia grade potential in key features

Barton Gold Holdings Limited (ASX:BGD, OTCQB:BGDFF, FRA:BGD3) (Barton or Company) is pleased to announce first assay results from recent drilling at its South Australian Tunkillia Gold Project (Tunkillia).

These assays confirm broad new intervals of high-grade gold mineralisation which infill the central portion of Tunkillia's S1 'Starter Pit', emphasising the high-value nature of this zone to Tunkillia's development. Commenting on the new Tunkillia assay results,

HIGHLIGHTS

- New assays support higher-grade model for Tunkillia S1 'Starter Pit' mineralisation; infill drilling targeting conversion to JORC (2012) 'Measured' category to underwrite financing.
- Tunkillia 'S1' pit modelled to produce \$825m operating profit in first year of operations from average grade of 1.19 g/t Au – new broad, high-grade assays from this zone include:

- *Balance of assays from recent Tunkillia 'Phase 1' upgrade drilling expected during December 2025 and January 2026, with*

Barton Managing Director Alexander Scanlon said:

“Tunkillia’s S1 pit contains the project’s highest grade mineralisation, ideally located in a shallower, central zone.

“Modelling indicates that this will yield over 200,000 gold ounces, generating over \$800 million in operating free cash and paying back Tunkillia’s entire development cost more than 2x over during the first year of operations.

“This early phase of upgrade drilling was therefore designed to further de-risk this profile by infilling higher grade mineralisation to underwrite project finance.

“These results very much appear to support that objective, and also highlight the potential for the Tunkillia system to host very high grades within key structural features.

“We expect the balance of Phase 1 infill drilling assays by January, and are targeting the conversion of Tunkillia’s ‘S1’ and ‘S2’ optimised open pit mineralisation to JORC ‘Measured’ and ‘Indicated’ categories by March 2026.”
