

Cabral Gold Drills 9.5m @ 87.4 g/t Gold at Jerimum Cima

Cabral Gold (TSX.V: CBR)

Announced results from two additional diamond drill holes at the Jerimum Cima target within the Cuiú Cuiú Gold District, Brazil.

Recent drilling at the Jerimum Cima target at Cuiú Cuiú, returned 9.5m @ 87.4 g/t gold from 173.8m depth including 2.9m @ 285.5 g/t gold from 178.7m.

Cabral Gold Drills 9.5m @ 87.4 g/t Gold at Jerimum Cima Target, Cuiú Cuiú Gold District, Brazil

March 12, 2026

Vancouver, British Columbia—(Newsfile Corp. – March 12, 2026) – **Cabral Gold Inc. (TSXV: CBR)** (OTCQX: CBGZF) (“Cabral” or the “Company”) is pleased to announce results from two additional diamond drill holes at the Jerimum Cima target within the Cuiú Cuiú Gold District, Brazil.

Highlights

- Recent drilling at the Jerimum Cima target, located 3km ENE of the Central gold deposit and 3.5km NW of the MG gold deposit at Cuiú Cuiú, returned **9.5m @ 87.4 g/t gold** from 173.8m depth including **2.9m @ 285.5 g/t gold** from 178.7m depth in hole DDH372
- The zone intersected in DDH372 is most likely the same zone intersected by previously released drill holes which returned **45.6m @ 4.5 g/t gold**, and **9.5m @ 5.74 g/t gold** including **3.6m @ 13.9 g/t gold**, and suggests the presence of a high-grade zone which may form the core of the mineralized system at Jerimum Cima. The high-grade zone remains open along strike and at depth
- In addition, DDH369 which was drilled 500m further to the east at Jerimum Cima, intersected **6.1m @ 0.55 g/t gold** and **13.9m @ 0.73 g/t gold**. This hole is the most easterly hole so far drilled at Jerimum Cima and is a 150m step out from a previously released intercept in DDH365 which returned **3.8m @ 10.80 g/t** including **0.5m @ 80.51 g/t**. Gold mineralization remains open to the east and at depth
- Results on 2 additional diamond drill holes are pending from Jerimum Cima. Drilling is continuing and is aimed at defining the size of the broader mineralized system, and now, the extent of the high-grade mineralization intersected in DDH372

Alan Carter, Cabral's President and

CEO commented,

*“Whilst we have encountered very high-grade drill intercepts in several of the known deposits and recent discoveries within the Cuiú Cuiú district, notably Machichie NE where we recently drilled **11m @ 33.0 g/t and 12m @ 27.7 g/t gold**, we have never encountered drill results of this magnitude.*

*“DDH372 at Jerimum Cima returned **9.5m @ 87.4 g/t gold** including **2.9m @ 285.5 g/t gold**.*

“It is becoming increasingly clear that we have an important discovery at Jerimum Cima which is located 3km ENE of the Central gold deposit and 3.5km NW of the MG gold deposit, and is not currently part of the existing resource base.

“These latest drill results suggest the presence of a central zone of very high-grade material at Jerimum Cima which appears to be surrounded by lower grade stockwork mineralization.

“The high-grade zone appears to be localized at the intersection of E-W and NW-SE trending structures, and is within a broader mineralized envelope that is up to 200m wide and extends at least 750m E-W.

“Further drilling is planned, and is aimed at establishing the size of both the near surface gold-in-oxide zone, and the underlying zones of primary mineralization in the intrusive

rocks, particularly the high-grade zone encountered in DDH372".
