

# Cabral Gold Reports Multiple Intercepts at MG

Cabral Gold Inc. (TSX.V: CBR)

Provided assay results from two recently completed diamond drill holes and four RC holes at the MG gold deposit, within the Cuiú Cuiú gold district in northern Brazil.

Results continue to show higher grades in basement zones as well as strong gold mineralization within the weathered, oxide cover sequence.

Cabral Gold Reports Multiple Intercepts at the MG Gold Deposit, Cuiú Cuiú District, Brazil, Including 17.6m @ 4.1

# g/t gold and 18.1m @ 4.3 g/t gold

Vancouver, British Columbia—(Newsfile Corp. – June 8, 2021) – **Cabral Gold Inc. (TSXV: CBR) (OTC PINK: CBGZF) (“Cabral” or the “Company”)** is pleased to provide assay results from two recently completed diamond drill holes and four RC holes at the MG gold deposit, within the Cuiú Cuiú gold district in northern Brazil. Results continue to show higher grades in basement zones as well as strong gold mineralization within the weathered, oxide cover sequence.

## Cabral Gold – Highlights are as follows:

- DDH-215 drilled at MG returned **17.6m @ 4.1 g/t gold from 149.0m depth including 4.3m @ 11.3 g/t gold and 18.1m @ 4.3 g/t gold from 198.9m depth including 1.0m @ 45.1 g/t gold**. Both intercepts were returned from the sub-vertically dipping MG gold deposit which underlies the recently identified gold-in-oxide blanket
- The second significant intercept of **18.1m @ 4.3 g/t gold** returned from DDH-215 appears to be a new footwall zone, located south of the main MG gold deposit that has not been encountered in previous holes
- Drill results from four RC holes (RC65-RC68) drilled on the same section at MG and 300m to the west of DDH-215, returned encouraging results in gold-in-oxide blanket and saprolitized, oxidized basement material, including **51m @ 0.8 g/t gold** from surface in RC-65, **75m**

@ 0.6 g/t gold from surface in RC-66 (of which 47m was gold-bearing oxide blanket material), and 18m @ 1.4 g/t gold from surface in RC-68 which also returned 20m @ 0.9 g/t gold from 24m depth

## Cabral Gold Management Comments

*"The latest diamond-drill results from the MG gold deposit confirm that we have significant high-grade mineralization at depth within the main MG gold deposit and a new zone of high-grade mineralization in the footwall which has not been previously encountered.*

*"Furthermore, recent results from four RC holes drilled on a north-south section 300m west of where we recently intercepted 60m @ 3.5 g/t gold, confirm that the overlying gold-in-oxide blanket is extensive and of good grade.*

*"These results continue to demonstrate that we have significant zones of high-grade gold mineralization at depth at MG and excellent widths and grades of near surface oxide material in the overlying gold-in-oxide blanket."*

***Alan Carter, Cabral's President and CEO***

# City Investors Circle is based in the financial district in the City of London

We present interesting and exciting junior mining companies listed on the ASX and TSX stock exchanges to a group of city professionals, and private investors, all of whom are active investors with a mandate to invest in junior mining companies.

Our audience is selected and invited individually to ensure interest and relevance for the presenting company.

Meetings are non deal, small group, highly focused and engaged, with a lively Q and A to follow the main presentation.

We create awareness, and maintain interest in presenting companies by disseminating their future news to our entire investor group via email, social media, and our Monthly Review newsletter.

If you wish to present to our select group of active mining investors, please email [andrew@city-investors-circle.com](mailto:andrew@city-investors-circle.com)
