

Calidus Resources Report Blue Spec Strong Results

Calidus Resources Limited (ASX: CAI)

Announced highly promising results from a stream sediment sampling program at its Blue Spec gold project, located 75km from the Company's Warrawoona Gold Project in WA's Pilbara.

The results come from Blue Spec West, which is immediately along strike of the high grade 219,000 oz Au Blue Spec Project.

Calidus Resources – Strong exploration results highlight growth potential of Blue Spec Project

Blue Spec DFS set for completion in coming quarter as part of strategy to grow total production of Warrawoona Gold Project to 130,000 oz pa.

Calidus Resources Limited (ASX: CAI) is pleased to announce highly promising results from a stream sediment sampling program at its Blue Spec gold project, located 75km from the Company's Warrawoona Gold Project in WA's Pilbara.

The results come from Blue Spec West, which is immediately along strike of the high grade 219,000oz Blue Spec Project.

Calidus is also awaiting assays from Blue Spec East.

HIGHLIGHTS

- Greenfields exploration at the Blue Spec project defines three areas with elevated gold of up to 326 ppb
- The stream sediment sampling at Blue Spec West is the first modern exploration done in this area
- The results highlight the prospectivity of the western part of the Blue Spec Fault Zone, which has received very limited historical exploration and no drilling
- Follow-up soil sampling program being planned to be followed with drilling

Calidus will complete the Definitive Feasibility Study on Blue Spec in the June quarter.

The project has a Resource of 219,000 oz at 16.7gpt and is aimed at increasing production at Warrawoona from ~100,000ozpa to ~130,000ozpa.

Warrawoona is set to pour first gold in May 2022.

Blue Spec was acquired by Calidus in 2021

. Calidus entered into a farm-in agreement with Gondwana Resources in late 2020, under the terms of which Calidus can earn up to 75% of the tenement.

Calidus Resources management comments

“These early-stage results highlight the potential to grow the Blue Spec inventory, which could in turn increase the mine life at Warrawoona.

“The stream sediment geochemistry has identified two areas with significant gold anomalism, one of which is along strike from Blue Spec. A third area on a fault segment parallel to the Blue Spec trend has elevated gold concentrations and anomalous arsenic and is well-worth further investigation.

“Arrangements for a follow-up soil sampling program are already in progress with the aim of drill-testing targets as soon as possible. There has been no historic drilling in any of the prospective areas identified in the stream sediment program.”

Calidus Managing Director Dave Reeves
