

# Cartier commence surveying their MacCormack property

**Cartier Resources Inc. {TSX.V: ECR}** has commenced geophysical and geometric surveys on their MacCormack property.

This is situated NW of La Ronde in Quebec, Canada.

## **Cartier Starts Geophysical Surveys at MacCormack**

VAL-D'OR, QUEBEC- **Cartier Resources Inc. {TSX.V: ECR}** announces that it has begun geophysical OreVision and magnetometer surveys on their MacCormack Property, situated 25 km north-north west of the Bousquet – LaRonde mining camp infrastructures, in Quebec.. The surveys follow positive results of the calibration test line with OreVision technology completed on one line over the MacDeroff massive sulphide showing, and MacCormack gold showing.

The objective of these surveys is to locate, along the favourable zones known on the property, new geophysical anomalies similar to that of the known mineralisation. The surveys will be conducted over a line cut grid of 40 km, covering an area of 2 km by 3 km. The OreVision technology will search this area for deposits up to a depth of 600 m.

The occurrence of zinc-rich volcanogenic massive sulphide mineralisation on the property demonstrates the areas potential to generate these types of deposits. Furthermore, the favourable horizon that contains the mineralisation has been recognized over a distance of 7 km.

**Philippe Cloutier, President and CEO**, commented: *"we have the advantage of having known mineralisation near surface with an innovative deep searching geophysical method that could lead to new discoveries on the property"*.
