

Cartier Intersects 7.1 g/t AU over 11.5 m at Chimo

[Cartier Resources {TSX.V: ECR}](#)

Reported values of 7.1 grams per tonne (g/t) gold (Au) over 11.5 metres, including 22.0 g/t Au over two metres intersected at a distance of 550 m below Zone 5B4-5M4-5NE of the Chimo mine gold property located 45 kilometres east of Val d'Or, Quebec.

Cartier Resources drills 11.5 m of 7.1 g/t Au at Chimo

2020-02-18 09:41 ET – News Release

Mr. Philippe Cloutier reports

**CARTIER INTERSECTS 7.1 G/T AU OVER 11.5 M 550 M BELOW ZONES
5B4-5M4-5NE ON CHIMO MINE PROJECT; ILLUSTRATING THE POTENTIAL
FOR RESOURCE EXPANSION**

.

Cartier Resources Inc. has noted values of 7.1 grams per tonne (g/t) gold (Au) over 11.5 metres (m), including 22.0 g/t Au over two m intersected at a distance of 550 m below Zone 5B4-5M4-5NE of the Chimo mine gold property located 45 kilometres (km) east of Val d'Or, Que.

Highlights:

- 7.1 g/t Au over 11.5 m, including 22.0 g/t Au over two m, 550 m below Zone 5B4-5M4-5NE, demonstrating the continuity of mineralisation to a depth of 1.3 km;
- The Dec. 17, 2019, resource estimate showed Zone 5B4-5M4-5NE having 28,400 ounces of gold in the indicated resource category and 137,140 ounces of gold in the inferred resource category;
- The results of this press release illustrate the potential for expansion, at depth, of the resources estimated for Zone 5B4-5M4-5NE over an additional distance of at least 550 m.

Values of seven g/t Au over two m, included within a section grading 2.6 g/t Au over 16.1 m, were also obtained 300 m below Zone 5B4-5M4-5NE. The continuity of mineralisation makes it possible to plan drill targets over long distances and repeat the intersections.

.

"The potential for resource expansion is open in all directions below the new Zones 5B4-5M4-5NE, testifying to the importance of the mineralised system and its continuity," commented **Philippe Cloutier, president and chief executive officer.**
