The CIC Market Review for October 2018 has been published.

Featured this month: – The continuing decline of precious and base metal prices, crypto thoughts as more coins ICO but total market cap declines, and an overview of our featured companies' news releases.

There is also a brief synopsis of the presentation given by Neometals MD Chris Reed to the circle in London, where the highlight was the newsthat the Barramhbie titanium / vanadium project would be spun out of NMT, into a newco to be listed on the ASX, subject to shareholder approval at an EGM to be convened during november.

Attendees were advised that once approval has been given, the record date will be set enabling shareholders to receive shares in newco.
