Cornish Metals Releases Assay Results for No. 4, No. 8 and Roskear B Lodes as Part of the South Crofty Tin Project Metallurgical Drill Programme

True width intercepts up to 2.12m grading 3.24% tin in No 4 Lode and up to 1.46m grading 4.66% tin in Roskear B

Cornish Metals Inc. (TSX-V/AIM: CUSN) (“**Cornish Metals**” or the “**Company**”), a mineral exploration and development company focused on its South Crofty tin project in Cornwall, United Kingdom, is pleased to announce assay results from the recently completed metallurgical drill programme at South Crofty Tin Project, Cornwall, UK.

Richard Williams, CEO of the Company stated:

“On a global perspective these are high grade tin assay results, but they reflect typical widths and grades of the tin mineralisation we have encountered and mined historically at South Crofty and serve to confirm and add further confidence to the Mineral Resource estimate we have for the No. 4, No. 8, and Roskear B Lodes.

“We look forward to receiving the results from the metallurgical studies for these areas, including diluted head grades, ore sorting amenability, gravity release and paste backfill studies, which are expected by the end of Q3, 2023.”
