Mr. James McDonald reports

KOOTENAY REPORTS MULTIPLE HIGH-GRADE SILVER INTERCEPTS INCLUDING 1,585 GPT OVER 0.60 METERS WITHIN 553 GPT OVER 2.9

METERS & 782 GPT OVER 1.05 METERS WITHIN 400 GPT OVER 4.97 METERS AT COLUMBA PROJECT

Kootenay Silver Inc. has released assay results from the first six of 10 holes completed to date as part of its 2020 drill program at the high-grade Columba silver project, located in Chihuahua state, Mexico. These holes tested the F vein structure along 400 metres of strike length, with holes 42 to 45 focusing on gaps in the 2019 drill program, while holes 46 and 47 were stepouts along strike.

Kootenay Silver's president and chief executive officer, James McDonald, stated: *"We are very encouraged that the F vein is showing continuity in both veining and grades, and we are really looking forward to getting back on the ground and drilling more holes. Mine sites have been given the go-ahead by the federal government of Mexico to restart operations, and once it is confirmed exploration activities are included, we will be able to resume drilling."*
