

Nevada King Intercepts 2.37 g/t AU Over 75m

Nevada King Gold (TSX-V: NKG)

Announced assay results from three vertical RC holes recently completed at its Atlanta Gold Mine Project located in Nevada, in the prolific Battle Mountain Trend.

The glory hole was 2.37 gpt Au over 75m.

NEVADA KING INTERCEPTS 2.37 G/T AU OVER 75M AT A DEPTH OF JUST 12M BENEATH THE ATLANTA PIT, EXTENDS THE ‘EAST HIGH-GRADE ZONE’ NORTHWARD

VANCOUVER, BC, November 29, 2023 – **Nevada King Gold Corp. (TSX-V: NKG; OTCQX: NKGFF)** (“Nevada King” or the “Company”) is pleased to announce assay results from three vertical reverse circulation (“RC”) holes recently completed at its Atlanta Gold Mine Project located 264km northeast of Las Vegas, Nevada, in the prolific Battle Mountain Trend.

The three holes reported today tested gaps within the existing drill pattern across the 80m-wide northerly trending Atlanta Mine Fault Zone (“AMFZ”) between the East Atlanta Fault (“EAF”) and the West Atlanta Fault (“WAF”) and are plotted in plan (Figure 1) and along an updated Section 22-10N(3) (Figure 2), initially released on [April 20, 2023](#) and updated on [August 10, 2023](#).

Highlights:

Hole No.	From (m)	To (m)	Interval (m)	Au (g/t)	Ag (g/t)
AT23NS-124	12.2	86.9	74.7	2.37	43.9
AT23NS-120	33.5	71.6	38.1	1.14	43.4
AT23NS-129	109.8	143.3	33.5	1.14	31.4

Table 1. All holes reported today along Section 22-10N(3). Mineralization occurs along sub-horizontal horizons generally dipping gently westward; true mineralized thickness in vertical holes is estimated to be between 85% and 95% of reported vertical drill intercept length.

- **2.37 g/t Au over 74.7m in AT23NS-124 starts at a depth of just 12m beneath the pit floor** and was sited to test for a northward extension of higher-grade and thicker mineralization hosted within a 20m-wide fault block, termed the **“East High-Grade Zone”** that runs along the western side of the EAF and floors the bottom of the Atlanta Pit.

Cal Herron, Exploration Manager of Nevada King, comments,

“The three holes released today along Section 22-10N(3) provide further support for the current infill drilling program along the AMFZ, the purpose being to better define the grade and geometry of mineralization.

“With the areal extent of mineralization along the AMFZ now fairly well defined, our current focus is on boosting the average grade by drilling in closer to the high-angle feeder faults responsible for both higher grade and thicker

mineralization.

“Today’s 75m thick intercept averaging 2.37 g/t Au in AT23NS-124 is the thickest intercept recorded to date along the East High-Grade Zone.”

City Investors Circle is based in the financial district in the City of London

We present interesting and exciting junior mining companies listed on the ASX and TSX stock exchanges to a group of city professionals, and private investors, all of whom are active investors with a mandate to invest in junior mining companies.

Our audience is selected and invited individually to ensure interest and relevance for the presenting company.

Meetings are non deal, small group, highly focused and engaged, with a lively Q and A to follow the main presentation.

We create awareness, and maintain interest in presenting companies by disseminating their future news to our entire investor group via email, social media, and our Monthly Review newsletter.

If you wish to present to our select group of active mining investors, please email andrew@city-investors-circle.com
