

# Nevada King Intercepts 19.2 G/T AU Over 10.7m

## Nevada King Gold (TSX-V: NKG)

Announced assay results from five reverse circulation holes located along an updated Section 22-8N(3), that were recently completed at its Atlanta Gold Mine Project located 264km northeast of Las Vegas, Nevada, in the prolific Battle Mountain Trend.

Nevada King Atlanta Gold Mine

# NEVADA KING INTERCEPTS 19.2 G/T AU OVER 10.7M WITHIN 6.9 G/T AU OVER 68.6M & 19.3 G/T AU OVER 3.0M WITHIN 4.9 G/T OVER 77.7M AT ATLANTA, EXPANDS NEAR SURFACE HIGH-GRADE “JEWELRY BOX” ZONE

Tuesday, February 6, 2024VANCOUVER, BC, February 6, 2024 – **Nevada King Gold Corp. (TSX-V: NKG; OTCQX: NKGFF)** (“Nevada King” or the “Company”) is pleased to announce assay results from five reverse circulation (“RC”) holes located along an updated Section 22-8N(3), initially [released February 1, 2023](#) and updated [October 30, 2023](#), that were recently completed at its Atlanta Gold Mine Project located 264km northeast of Las Vegas, Nevada, in the prolific Battle Mountain Trend.

## Highlights:

| Hole No.                 | From (m) | To (m) | Interval (m) | Au (g/t) | Ag (g/t) | Notes                      |
|--------------------------|----------|--------|--------------|----------|----------|----------------------------|
| AT23NS-174 <sup>+</sup>  | 117.4    | 186.0  | 68.6         | 6.90     | 93.7     | Angle hole: -82.5° dip     |
| Includes                 | 166.2    | 176.8  | 10.7         | 19.20    | 41.7     |                            |
| AT23NS-174A <sup>+</sup> | 118.9    | 196.6  | 77.7         | 4.90     | 75.0     | Angle hole: -83° dip       |
| Includes                 | 169.2    | 172.3  | 3.0          | 19.35    | 190      |                            |
| AT23NS-161               | 106.7    | 157.0  | 50.3         | 1.93     | 32.0     | Bottomed in Mineralization |
| AT23NS-162               | 109.8    | 146.3  | 36.6         | 3.44     | 116.0    |                            |
| AT23NS-163               | 120.4    | 147.9  | 27.4         | 1.25     | 59.3     |                            |

**Table 1. All holes released today. True mineralized thicknesses have yet to be determined for AT23NS-174, AT23NS-174A, and AT23NS-161, whereas true mineralized thickness in AT23NS-162 and 163 are estimated to be 90% to 100% of the reported intercept length. <sup>+</sup>Denotes angle hole.**

- Two of today's holes were angle holes that were sited to follow up on the very high-grade intercept of **6.55 g/t Au and 100.8 g/t Ag over 82.3m**, including **26.71 g/t Au over 12.2m** encountered in angle hole AT23NS-133F, which represents the third most gold rich intercept so far recorded at Atlanta (released [November 14, 2023](#)).
- Today's two follow up holes successfully crossed the same high-grade structure, intercepting **6.9 g/t Au and 93.7 g/t Ag over 68.6m** including **19.2 g/t Au over 10.7m** in AT23NS-174 and **4.9 g/t Au and 75.0 g/t Ag over 77.7m** including **19.35 g/t Au over 3.0m** in AT23NS-174A.

## Cal Herron, Exploration Manager of Nevada King, stated,

*"We chose to further pursue the high-grade intercept in AT23NS-133F largely because we could fan-drill the probable strike line with a series of shallow, steep angle holes from a single drill platform."*

*"So far, we've proven that the high-grade mineralization can be tracked along strike, which will enable a resource modeler"*

*to tie the high-grade intercepts together into a cohesive body.*

*“Just as important, we also now see what a high-grade feeder zone at Atlanta looks like and how it relates geologically to the surrounding rocks and structures.*

*“The whole point of drill-defining these high-grade structures is to further up-grade the resource, both in scale and confidence.*

*“The AT23NS-133F high-grade zone may be too narrow to appreciably upgrade the surrounding area, unless additional definition drilling can connect the higher grade mineralization (>5 g/t Au) eastward to the West Atlanta Fault.*

*“However, the larger areas northwest and southwest of the pit along lines 22-3N through 22-7N and 22-14N through 22-18N host considerably more potential for increasing overall grade.*

*“In both areas there is good evidence for multiple feeder zones, such as hole AT23WS-44 (11.64 g/t Au over 108.2m including 37.16 g/t Au over 29m).*

*“Going forward, Nevada King is now re-evaluating its drill intercepts within both areas and choosing discreet targets to selectively test.”*

## **City Investors Circle is based in the financial district in the City of London**

We present interesting and exciting junior mining companies listed on the ASX and TSX stock exchanges to a group of city professionals, and private investors, all of whom are active investors with a mandate to invest in junior mining companies.

Our audience is selected and invited individually to ensure interest and relevance for the presenting company.

Meetings are non deal, small group, highly focused and engaged, with a lively Q and A to follow the main presentation.

We create awareness, and maintain interest in presenting companies by disseminating their future news to our entire investor group via email, social media, and our Monthly Review newsletter.

If you wish to present to our select group of active mining investors, please email [andrew@city-investors-circle.com](mailto:andrew@city-investors-circle.com)
