Radisson intersects 14.90 g/t over 8.00 m, 41.04 g/t Au over 2.30 m and 5.73 g/t over

# 9.20 m, highlighting resource expansion potential to the east and west of the first trend at the O'Brien project

Radisson Mining Resources Inc. (TSX-V: RDS, OTC: RMRDF): ("Radisson" or the "Company") is pleased to announce significant high-grade gold intercepts from the ongoing exploration drill program at its 100% owned O'Brien gold project located along the Larder-Lake-Cadillac Break (see <a href="location map 1">location map 2</a>), halfway between Rouyn-Noranda and Val-d'Or in Quebec, Canada.

Drilling has continued to validate the 2019 litho-structural model (announced in February 2019) while demonstrating the potential for resource growth at depth and along strike. Drilling so far has been focused on an approximately 1 km strike length to the east of the old O'Brien Mine, historically considered the highest-grade gold mine in Quebec (production of 587,121 oz Au grading 15.25 g/t from 1926 — 1957).

With the <u>acquisition of the New Alger project</u> (August 2020, <u>See HERE</u>), Radisson now controls approximately 5.2 km of highly prospective strike along the Cadillac Break, including 2.5 km to the east and west of the main shaft at the old O'Brien Mine.
