Rokmaster Resources Strong Drill Intercept

Rokmaster Resources (TSX.V: RKR)

Announced a strong intersection of the Revel Ridge Main Zone by drillhole RR22-102a at the Revel Ridge Project.

Rokmaster Resources Revel Ridge Plan –

Rokmaster Resources (RKR.V): intersects 8.84 g/t AuEq over 4.20 m on northwestern extension of Revel Ridge Main Zone

VANCOUVER, BC, Nov. 28, 2022 /CNW/ – **Rokmaster Resources Corp.** (TSX.V: RKR) (OTCQB: RKMSF) (FSE: 1RR1) ("Rokmaster" or "the Company") is pleased to announce a strong intersection of the Revel Ridge Main Zone ("RRMZ") by drillhole RR22-102a at the Revel Ridge Project ("Revel Ridge" or "the Project").

Drillhole RR22-102a was wedged to completion around the core barrel which broke due to equipment wear at 222.5 metres. The primary drillhole (RR22-102) intersected strong sphalerite-galena mineralization in a silicified limestone between 206.90 m and 211.50 m which represents the Yellowjacket Zone ("RRYZ"). Notably, this intersection occurs 65 m from RR21-50, the nearest drillhole hosting RRYZ mineralization. The RRYZ was encountered a second time in the wedge hole (RR22-102a) which is tabulated below.

The Main Zone ("RRMZ") is located at the base of a thick carbonate unit at 287.3 m. Similar to drillhole RR22-101 (see Press Release dated Sept. 26, 2022), the RRMZ in

RR22-102a is primarily developed in a footwall quartzite package. This favorable carbonate-quartzite contact, which supports metre-scale massive sulphide bands in the RRMZ, may be laterally extensive with a distance of 95 metres between RR22-101 and RR22-102a.

John Mirko, Rokmaster Resources President and CEO, commented

“Drillhole RR22-102a bolsters the strength of the RRMZ and the Yellowjacket Zone in the northwest extension and meets the primary goal of the summer 2022 drill campaign. Rokmaster has located a favourable geological setting hosting wide intersections of RRMZ that is proving to be expansive.

“Work is progressing well on the update to the PEA that will be incorporating both the 2021 mineral resource estimate and the recent metallurgical break-through that demonstrably improves gold recoveries.”

“The data from these drillholes will be combined with the Spring 2022 drill program and all of the historical drill data to update the mineral resource estimation in 2023.

City Investors Circle is based in the financial district in the City of London

We present interesting and exciting junior mining companies listed on the ASX and TSX stock exchanges to a group of city professionals, and private investors, all of whom are active investors with a mandate to invest in junior mining companies.

Our audience is selected and invited individually to ensure interest and relevance for the presenting company.

Meetings are non deal, small group, highly focused and engaged, with a lively Q and A to follow the main presentation.

We create awareness, and maintain interest in presenting companies by disseminating their future news to our entire investor group via email, social media, and our Monthly Review newsletter.

If you wish to present to our select group of active mining investors, please email andrew@city-investors-circle.com

=======

This website is not sponsored, we are truly independent, and will always remain so.

Companies featured here have either presented to the Circle in London, or have been selected because they are considered to have interesting projects, in good jurisdictions, run by an experienced management team.

All information used in the preparation of this communication has been compiled from publicly available sources that we believe to be accurate and reliable, however, we cannot, and do not, guarantee the accuracy or completeness of this.
