Rumble Finds Multiple New High-Grade Feeder Targets

Rumble Resources (ASX: RTR)

Announced the latest round of high grade Zn-Pb RC drilling results from the Tonka Prospect, plus the delineation of multiple new gravity low targets which potentially may represent new high-grade feeder faults within the 11km Tonka-Navajoh mineralised footprint, and over 9km of drill untested strike southeast of Tonka-Navajoh deposit.

Multiple New High-Grade Feeder Targets Defined Within and Along Strike of the Tonka-Navajoh Deposit Geochemistry and Airborne Gravity – Multiple New Feeder Targets

Rumble Resources Limited (ASX: RTR) ("Rumble" or "the Company") is pleased to announce the latest round of highgrade Zn-Pb RC drilling results from the Tonka Prospect, plus the delineation of multiple new gravity low targets which potentially may represent new high-grade feeder faults within the 11km Tonka-Navajoh mineralised footprint and over 9km of drill untested strike southeast of Tonka-Navajoh deposit (Navajoh Southeast Trend).

The new high priority targets were interpreted following recently completed soil geochemical and airborne gravity gradiometer surveys at the Earaheedy Project, located 110km north of Wiluna, Western Australia.

• Surface geochemistry and airborne gravity surveys have defined multiple highgrade feeder zone targets at Tonka-Navajoh Prospects and the newly defined
Navajoh Southeast Trend.

• Interpretation of the recent airborne gravity survey has

highlighted a strong
association between gravity lows and higher-grade Zn-Pb feeder faults at the
Tonka and Navajoh Prospects Navajoh Southeast Trend E69/3787 (100% RTR) – 9kms of untested strike.
• Surface geochemistry along the Navajoh Southeast Trend returned strong
continuity of Zn-Pb in soil anomalism over 9km of untested strike
• Airborne gravity highlighted numerous gravity low targets that potentially
represent multiple new high grade feeder faults along the 9km of strike
• These exciting new feeder targets are planned to be drill tested in early 2023
Tonka-Navajoh Prospect – over 11kms of Zn-Pb mineralisation defined
• Recent drilling has now extended the strike of the Tonka-Navajoh
mineralisation to over 11km; a 37% increase in length.

City Investors Circle is based in the financial district in the City of London

We present interesting and exciting junior mining companies listed on the ASX and TSX stock exchanges to a group of city

professionals, and private investors, all of whom are active investors with a mandate to invest in junior mining companies.

Our audience is selected and invited individually to ensure interest and relevance for the presenting company.

Meetings are non deal, small group, highly focused and engaged, with a lively Q and A to follow the main presentation.

We create awareness, and maintain interest in presenting companies by disseminating their future news to our entire investor group via email, social media, and our Monthly Review newsletter.

If you wish to present to our select group of active mining investors, please email andrew@city-investors-circle.com

=======

This website is not sponsored, we are truly independent, and will always remain so.

Companies featured here have either presented to the Circle in London, or have been selected because they are considered to have interesting projects, in good jurisdictions, run by an experienced management team.
