Silver Tiger Metals management comments

“Drill Holes 296 and 319 are the first holes drilled just north of the Espuelas Canyon on the Sooy Vein.

“Historical mining at El Tigre on the Sooy Vein stopped just south of the Espuelas Canyon when the miners lost the vein while drifting.

“We have discovered a continuation of the Sooy Vein with these near surface wide high-grade intercepts in drill holes 296 and 319 at a vertical depth of approximately only 20 meters.

“Drilling is continuing along strike to the north from these two initial drill holes.”
