Zone

True widths and zone geometries cannot be definitively determined at this time. Grade-capping of individual assays has not been applied to the Au and Ag assays informing the length-weighted composites. Samples below detection limit were nulled to a value of zero.

New Mineralization Expands 21A West Zone

Situated at a vertical depth of 25 metres below surface, drill hole SK-22-1132 has vertically extended the 21A West Zone to near-surface with an intersection of **18.18 g/t Au, 130.2 g/t Ag over 9.26 m**.
This new intercept occurs in a portion of the 21A Zone that is devoid of historical drilling and 75 metres vertically up-dip of previously reported Skeena drill hole SK-22-1031, which intersected **2.21 g/t Au, 4.6 g/t Ag over 50.00 m**.
An additional extension to the south end of the 21A West Zone just beyond the Feasibility Study pit limits and only 10 metres below surface was completed by drill hole SK-22-1177, averaging **14.90 g/t Au, 2.5 g/t Ag over 5.70 m**. This new expansion occurs 100 metres vertically up-dip of previously reported drill hole SK-22-1028, which intersected **1.74 g/t Au, 1.7 g/t Ag over 46.77 m.** The space between the two drill holes remains untested.
