Crypto news – Stellar Lumens

Stellar Lumens have risen by 30% in a few days, and the simple reason is that the crypto currency, created to facilitate fund transfers within seconds at incredibly low cost, have been

listed on the Coinbase Pro Exchange.

The man responsible for the creation of Stellar with lumens is Ripple co-founder Jed McCalebis.

Launched in 2014, Stellar’s blockchain-based payments network has been known for its low fees and quick transactions.

Coinbase’s blog post states that Steller Lumens has a vision of uniting the world’s financial infrastructure so that money can flow quickly and cheaply between banks, businesses, and people,

> *“the Internet connected the world’s computers so that information could be shared globally. Stellar aims to do the same for money.”*
