Larvotto Ships First Concentrate from Hillgrove Antimony-Gold Mine

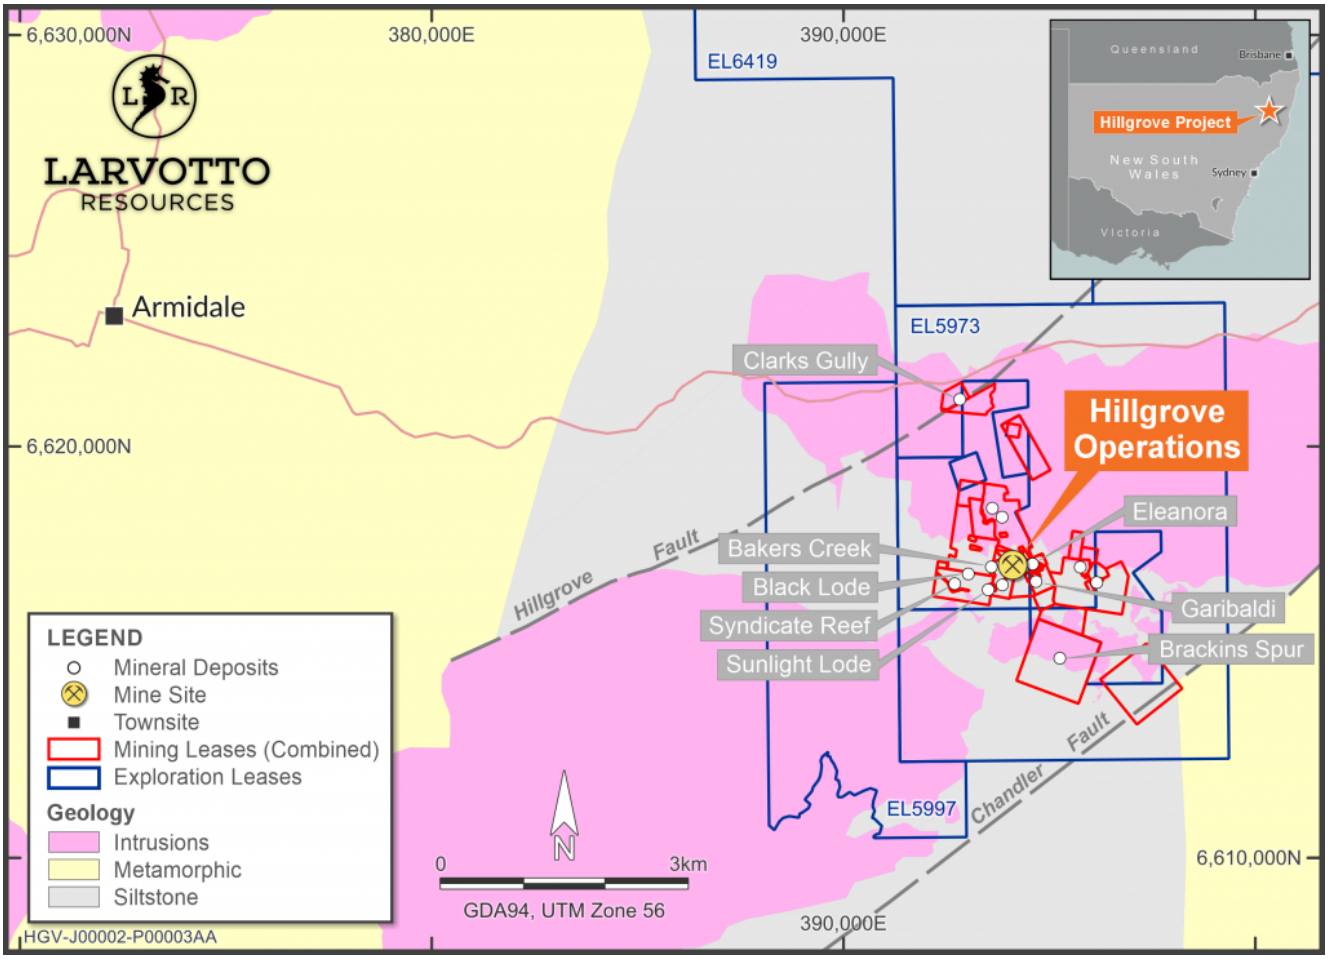

Larvotto Resources (ASX: LRV)

Advised the first antimony concentrate shipment has departed the Company's 100%-owned Hillgrove Mine in New South Wales.

The first shipment of 68 tonnes of antimony concentrate has commenced with delivery to the Company's antimony offtake partner Wogen Resources at the mine gate.

Larvotto Announce First Concentrate Shipped from Hillgrove Antimony-Gold Mine

Larvotto Resources Limited (ASX: LRV), (‘Larvotto’ or ‘the Company’) is pleased to advise the first antimony concentrate shipment has departed the Company’s 100%-owned Hillgrove Mine in New South Wales.

The first shipment of 68 tonnes of antimony concentrate has commenced with delivery to the Company’s antimony offtake partner Wogen Resources at the mine gate.

Having satisfied a condition of the offtake agreement, the Company will receive an initial payment for the delivery.

Highlights

• First shipment of antimony concentrate has commenced with the first truck leaving site today
• Concentrate collected at the mine gate by offtake partner Wogen Resources, satisfying a delivery condition for part-

payment under the offtake agreement
• Production ramp-up continues to improve, with plant availability exceeding schedule, processing tonnages increasing and ongoing improvements in concentrate grades
• First gold concentrate shipment being prepared
• Tungsten extraction testwork continues to highlight positive results
• Hillgrove Mine to produce approximately 4,900 tonnes of antimony and 40,500 ounces of gold per annum

Comment from Ron Heeks, Managing Director:

"The delivery of the first antimony concentrate is a proud moment for the Company, as Hillgrove becomes a revenue generating mine and officially Australia's newest supplier of critical minerals.

"As the first of the three products the plant produces, the focus has been on the antimony circuit. With the antimony circuit now operating at a steady rate, we will broaden our focus to optimise gold concentrate and gold doré production.

“The ramp-up of the plant is progressing well, with availability, processing tonnages and concentrate grades continuing to improve as the team refines the performance of the plant.

“The progress of the production reflects the wonderful, combined efforts of the processing and mine teams in commissioning and optimising the plant.

“This is a key milestone for Australia’s critical mineral and mining sector and is also significant for the New England region, supporting local jobs, businesses and economic activity.

“We all look forward to the shipment of first gold concentrate and production of the first gold bars in the near term.”

G2 Goldfields has been acquired by G Mining Ventures, and is therefore deleted from the Tier 3 watchlist.

Larvotto Resources (ASX: LRV) has replaced the now delisted G2 Goldfields on the list.

Initiating coverage of Larvotto Resources

Company intoriduction.

Larvotto Resources (ASX: LRV)

Larvotto Resources is an Australian resources company focused on the development of its dual-commodity Hillgrove Antimony-Gold Project in NSW.

With production set to commence in 2026, Hillgrove is poised

to become Australia's largest producer of antimony, expected to produce 7% of global antimony requirements when global supply is tightening, and Western governments are prioritising strategic supply chains.

Hillgrove contains Australia's largest and the 8th largest antimony deposit globally which boasts:

- Maiden Ore Reserve of 636,000oz AuEq @ 6.6g/t AuEq
- Mineral Resources of 1.7Moz AuEq @ 7.4g/t AuEq
- Exploration Target of between 670,000 and 1.08M oz AuEq, ranging between 7.4-8.46g/t AuEq

Larvotto's May 2025 Definitive Feasibility Study delivered compelling results including Average LOM **EBITDA of $250M per** annum on the mid case pricing scenario, with **post-tax free cash flows of $128M per annum** demonstrating robust economics expected from the Hillgrove Project and rapid payback.

The DFS outlined an initial 8-year mine life, with a significant extension anticipated as existing Resources in adjacent deposits are progressively converted to Reserves.

Larvotto is also focused on exploring its wider portfolio of assets located in Australia in close proximity to other productive mines, proven discoveries and existing infrastructure.

In June 2026, Larvotto entered a binding agreement to acquire 100% of Hammer Metals Limited (ASX: HMX) including its advanced district-scale Mt Isa copper and critical minerals portfolio in Queensland.

Combining its near-term production at Hillgrove Antimony-Gold Project in NSW with a second district scale project in Queensland, Larvotto is advancing its strategy to build a

leading, Australian critical minerals and precious metals company with a focus on antimony, gold and copper production.

The Company is led by a highly experienced board and management with a strong track record in exploration, capital finance and advancing mining projects.

	Market cap	**A$42m @A$ 0.10.5**
	Location	**Queensland, Australia**
	Website	**www.pacgold.com.au/**

Pacgold St George Gold and Antimony Geochem Extends Fence Strike >30km

Fence Structure hosts 7 major targets with no modern drilling

Pacgold Limited (ASX: PGO) ('Pacgold' or 'the Company') is pleased to announce further results of the systematic geochemical soil programme and rock chip sampling completed on the St George Gold-Antimony Project ('the Project') in northeast Queensland.

Pacgold is undertaking exploration on the Project under a Farm-In and Joint Venture Agreement with Hardrock Mineral Exploration Pty Ltd, whereby Pacgold has the right to earn up to 100% interest in the Project.

HIGHLIGHTS

 CONTINUED DELINEATION OF REGIONAL-SCALE GEOCHEMICAL ANOMALIES – Gridbased soil and rock chip sampling extends the gold and antimony anomalism hosted within the Fence Structural Zone (FSZ) to a strike in excess of 30km.
 HIGH-GRADE GOLD AT LIMESTONE PROSPECT – High-grade rock chip samples taken in newly discovered large-scale structure with reported gold values including 18.5g/t Au (SG110108), 5.37g/t Au (SG110109), 4.86g/t Au (SG110110) and 4.96g/t Au (SG110113).

 NEW ANOMALIES DELINEATED AT LIMESTONE AND BIG WATSON – Extensive
(Au-Sb-As) anomalies identified at Big Watson and strong gold results over the Limestone prospect, both associated with the regional Fence structure extending over 30km in strike.
 UNTESTED STRUCTURES DRILL READY – No modern drilling carried out on six of the seven defined anomalies with multiple prioritised targets to be tested in next drilling campaign.

Pacgold's Managing Director, Matthew Boyes, commented:

"The number of fertile structures and extent of the mineralisation on this ground package continues to increase rapidly.

“The discovery of high-grade gold at surface at the Limestone project is particularly exciting with multiple outcropping veins returning high-grade gold numbers over a large area.

“We have now demonstrated that the Fence structure is mineralised over a strike length of approximately 30km from Big Watson in the south up to the Limestone prospect in the north, this coupled with multiple newly delineated soil anomalies gives the company a strong pipeline of targets to follow up once the exploration season kicks off this year.”

Pacgold's St George Soil Geochemistry Defines 14km Gold and Antimony Anomaly

Anomaly open along strike and coexistent with major mineralised structures hosting Fence and Ridgeline Prospects

Pacgold Limited (ASX: PGO) ('Pacgold' or 'the Company') is pleased to announce the initial results of the systematic geochemical soil programme completed on the "St George Gold-Antimony" Project ('the Project') in northeast Queensland.

HIGHLIGHTS

DEFINITION OF SIGNIFICANT-SCALE SOIL ANOMALIES – Regional grid-based soil sampling confirms significant gold and antimony anomalies coexistent with structurally-controlled Au and Sb-bearing veins over 7km of strike on each of two priority structures; both anomalies are open along strike

STRONGEST ANOMALIES DIRECTLY LOCATED ON FENCE AND RIDGELINE PROSPECTS – Highest intensity Au and Sb anomalies up to 1.5km

in length centred on both the Fence and Ridgeline Prospects

INFILL SOIL ASSAY RESULTS AWAITED – Results received are 400 metres by 50 metres sample centres; assay results for infill samples collected at 200m expected in December, enabling planning of drilling for Q2 2026

MAJOR ANOMALIES REMAIN UNTESTED – No modern drilling carried out into either anomaly, multiple targets to now be refined and tested in next drill campaign.

Pacgold's Managing Director, Matthew Boyes, commented:

"Exploration has accelerated quickly at St George Gold-Antimony Project with a focussed team completing an extensive first pass soil geochemical programme in conjunction with mapping and rock chip sampling of outcropping mineralisation over the past 6 weeks.

"Initial rock chip sample assays have produced some outstanding gold and antimony values from structures at surface with considerable mapped strike extents with both Ridgeline and Fence prospects sampled over 3km and 2km in strike length respectively.

"Its crucial to point out that these outstanding soil anomalies were acquired over tenements located 5km to the south of the St George historical mine location demonstrating

the extent and consistency of mineralisation within the tenement package.

“This tenement package has some of the most well-developed antimony-rich veins across the entire Hodgkinson Province.

“With this newly acquired geochemical data PACGOLD’s team can now focus in on target development and selection of drill sites for the coming campaign, this will be an extensive programme to give the team the best chance of making multiple significant discoveries in what is fast becoming the premier Au-Sb province in Australia.”

Pacgold Farm In Agreement to acquire St George Gold-Antimony Project North Queensland

Widespread high grade outcropping Au-Sb mineralisation

Pacgold Limited (ASX: PGO) ('Pacgold' or 'the Company') is pleased to announce a farm in agreement on the "St George Antimony" Project ('the Project'), 70km west of Mt Carbine, North Queensland. The tenement package consists of 7 tenements comprising of 5 granted and 2 tenements in application for a total area of 905km2 within a developing Antimony province in the Hodgkinson Province.

HIGHLIGHTS

• FARM IN AGREEMENT SIGNED – Pacgold has the right to earn up to 100% interest in the St George Gold-Antimony Project in northeast QLD over three-stage farm in agreement, significant land position with exploration tenements totalling 905Km2
.
• ST GEORGE ANTIMONY MINE – Historical antimony mine with reported production of 60T grading 60% of Antimony1 produced from artisanal open cut and underground workings; no modern drilling undertaken.
• CRITICAL MINERAL EXPOSURE – Antimony classed as critical mineral, with robust
demand and limited global supply growth leading to metal prices at historic highs
• HIGH-GRADE ANTIMONY IN ROCK CHIPS – Due diligence rock chip sampling and
mapping confirmed extremely high grades of Antimony in Au-Sb rich structurally controlled veins on the St George Mine, significant rock chips reported included;
• SG250704 returned 49.4% Sb and 0.05g/t Au
• HRX10212 returned 66.6% Sb and 0.01g/t Au
• HRX10086 returned 16.35% Sb and 10.1g/t Au
• HRX10161 returned 28.1% Sb and 0.01g/t Au
• HRX10208 returned 51.9% Sb, NSA for Au
• HRX10151 returned 8.82% Sb and 2.05g/t Au
• HERITAGE CLEARANCE COMPLETED – St George Mine heritage clearance now
completed and in excess of 500m of mineralised strike extent

drill ready.
• MULTIPLE TARGETS – Multiple high-grade Gold and Antimony occurrences on extensive regional structures within the tenement package including Poppy Prospect located approx. 2km to the west of St George Mine reported up to 112g/t Au and 17.5% Sb2
• FIRST PASS EXPLORATION COMMENCING – Pacgold will immediately commence
exploration on the land package with first pass mapping, geophysics, soil geochemistry
and drilling to be planned and completed before end of Q4.

.

Pacgold's Managing Director, Matthew Boyes, commented:

"Securing the St George Gold-Antimony Project is an exciting addition to our Queensland exploration portfolio, giving Pacgold exposure to a highly prospective, historically mined antimony asset in close proximity to our flagship Alice River Gold Project.

"Antimony is a critical mineral with a growing demand profile and an increasingly sharp geopolitical importance due to a supply structure dominated by China.

"With the price of Antimony recently reaching US$60,000/tonne and the extremely high grades confirmed from due diligence sampling, there is potential to unlock significant value at this underexplored project through systematic exploration, which we will commence immediately across the multiple high-grade targets already identified.

“With heritage clearance recently completed by the Hardrock Team, we’re looking forward to working with the local stakeholders and traditional owners to create a partnership that benefits all parties as we move into full scale exploration.

“Pacgold remains committed to advancing its flagship Alice River Gold Project and is now adding the complimentary St George Project to the Company’s growth strategy.”

Perpetua Resources Price Falling on Bad News

Perpetua Resources (TSX: PPTA)

The share price is falling following the News Release on Febrary 13th 2025, and now the lawyers are lining up to sue the company on behalf of investors.

A director has just announced a sale due to “tax reasons”. This is turning sour very quickly,

.

Comment.

A month ago Perpetua Resources looked a solid hold. The company had received permits for its Stribnite gold / antimony mine in Idaho, USA, despite local opposition from enviromentalists.

On the 13th February the company published a press release wich mentioned increased capex costs and AISC compared to the 2020 Feasibility Study.

This has caused the share price to go into a steep decline and has now fallen around 33% from the recent peak, including over 9% on Friday 21st February.

Perpetua Resources Price Falling on Bad News, Lawyers Lining Up

Investigation Details

> *On February 13, 2025, Perpetua disclosed in a filing with the U.S. Securities and Exchange Commission that the Company had "released an updated cash flow model for the Stibnite Gold Project (the 'Project'), which is based, in part, on basic engineering work completed by Ausenco Engineering USA South Inc. ('Ausenco') in January 2025 (the 'Financial Update')."*

> *Perpetua said that the "Financial Update also applies fourth quarter 2024 cost estimates for construction and operations, consistent with the Basic Engineering analysis, as well as current and consensus commodity pricing for sales" and that "the Financial Model reflects an increase in initial and*

total capital expenditures and LOM AISC compared to the base model included in the 2020 Feasibility Study" for the Project.

On this news, Perpetua's stock price fell $2.68 per share, or 22.39%, to close at $9.29 per share on February 14, 2025.

What's Next?

If you are aware of any facts relating to this investigation or purchased Perpetua securities, you can assist this investigation by visiting the firm's site: bgandg.com/PPTA. You can also contact Peretz Bronstein or his client relations manager, Nathan Miller, of Bronstein, Gewirtz & Grossman, LLC: 332-239-2660

There is No Cost to You

We represent investors in class actions on a contingency fee basis. That means we will ask the court to reimburse us for out-of-pocket expenses and attorneys' fees, usually a percentage of the total recovery, only if we are successful.

Perpetua Receives the Final Permit for Stribnite

Perpetua Resources (TSX: TO)

The Biden administration on Friday issued the final mining permit for Stibnite Idaho antimony and gold project, a move aimed at spurring U.S. production of a critical mineral at the center of a widening trade war between Washington and Beijing.

Perpetua Receives the Final Permit for Stribnite

Jan 3 (Reuters) – Perpetua Resources' (TSX: TO) received the final mining permit for the Stibnite Idaho antimony and gold project, a move aimed at spurring U.S. production of a critical mineral at the center of a widening trade war between Washington and Beijing.

Highlights

- Permit aims to boost U.S. antimony production amid trade tensions with China
- Perpetua's mine to meet over 35% of U.S. antimony needs by 2028
- Nez Perce tribe consulted, *concerns about salmon population remain*

Permitting for the mine, backed by billionaire investor John Paulson, comes after Beijing last month blocked exports to the U.S. of antimony, a metal used to make weapons, solar panels, flame retardants and other goods for which there are no current American sources.
The U.S. Forest Service released the final record of decision for Perpetua's Stibnite project – essentially the mine's permit – after an eight-year review process, according to documents published on the agency's website.
Perpetua's mine will supply more than 35% of America's annual antimony needs once it opens by 2028 and produce 450,000 ounces of gold each year.

City Investors Circle is based in the financial district in the City of London

We present interesting and exciting junior mining companies listed on the ASX and TSX stock exchanges to a group of city professionals, and private investors, all of whom are active investors with a mandate to invest in junior mining companies.

Our audience is selected and invited individually to ensure interest and relevance for the presenting company.

Meetings are non deal, small group, highly focused and engaged, with a lively Q and A to follow the main presentation.

We create awareness, and maintain interest in presenting companies by disseminating their future news to our entire investor group via email, social media, and our Monthly Review newsletter.

If you wish to present to our select group of active mining investors, please email andrew@city-investors-circle.com

=======

This website is not sponsored, we are truly independent, and will always remain so.

Companies featured here have either presented to the Circle in London, or have been selected because they are considered to have interesting projects, in good jurisdictions, run by an experienced management team.

All information used in the preparation of this communication has been compiled from publicly available sources that we believe to be accurate and reliable, however, we cannot, and do not, guarantee the accuracy or completeness of this.

These articles are for awareness and informational purposes only, and are not recommendations in any form. Always consult an investment

professional.
