West Red Lake Gold Reports 219.73 g/t Au over 4.8m, 148.36 g/t Au over 3m and 133.13 g/t Au over 2.5m in Austin 904 Complex – Madsen Mine

West Red Lake Gold Mines Ltd.(“West Red Lake Gold” or “WRLG” or the “Company”) (TSXV: WRLG)(OTCQB: WRLGF)is pleased to

report drill results from its 100% owned Madsen Mine located in the Red Lake Gold District of Northwestern Ontario, Canada.

Shane Williams, President & CEO, stated,

*“The underground drills at Madsen continue to deliver impressive results from the **904 Complex in lower Austin** – unlocking significant upside at depth.*

“We view the 904 Complex in a similar light as the 4447 area in South Austin – where drilling in 2025 uncovered very high-grade lenses of gold mineralization and now constitutes a significant portion of the ounces in our 2026 mine plan.

“We are implementing the same strategy at 904 where drilling will continue to define this area during 2026 to bring into consideration for mine design and production in early 2027.

“An additional benefit to the lower Austin 904 Complex is that most of this 200 by 200 metre panel, as it’s currently defined, has seen very little mining historically leaving the main mineralized zone mostly intact – this is expected to allow for larger stopes and more efficient development and extraction from this high-grade area.

“The results received to date in 904 are highly encouraging and we look forward to advancing the drills deeper in this priority area of the mine.”
