Corazon Mining Intersects Gold at Chalice

Corazon Mining (ASX: CZN)

Has intersected gold along approximately 450m of strike south of the historical Chalice open pit in assay results from a further 27 holes from its maiden Reverse Circulation (RC) drill program.

Gold mineralisation wasintersected in 23 of the 29 holes, with the highlight coming from the southern pit margin, including 8m @ 3.15 g/t Au.

Corazon Mining Intersects Gold at Chalice

Corazon Mining Limited (ASX: CZN) **(‘Corazon’ or ‘Company’)** has intersected gold along approximately 450m of strike south of the historical Chalice open pit in assay results from a further 27 holes from its maiden Reverse Circulation (RC) drill program. The program is the first drill test of the Chalice Exploration Target, and results place shallow mineralisation within the modelled target wireframes on a granted Mining Lease.

Assays for step-out holes approximately 800m south of the pit are pending.

The program targets near-surface extensions immediately south of the current JORC (2012) Mineral Resource Estimate of 2.18 Mt at 2.74 g/t Au for 191,000 oz Au. Positive results may support an evaluation of a potential southern extension to the existing open pit.

Gold mineralisation has been intersected in 23 of the 29 holes reported to date, with the best new results coming from the southern pit margin, including **8m @ 3.15 g/t Au** from 110m (incl. **4m @ 5.42 g/t Au** from 110m) in 26CRC006 and **9m @ 1.88 g/t Au** from 103m (incl. **4m @ 3.50 g/t Au** from 103m) in 26CRC005.

The results extend drill coverage from the southern margin of the historical open pit to approximately 450m south along strike. Holes 26CRC003 to 26CRC006 were drilled within the 2014 MRE mineralisation wireframes at the southern pit margin, while holes 26CRC007 to 26CRC029 stepped out progressively south to test shallow extensions outside the 2014 MRE wireframes, within the area of the 2026 Exploration Target. These results build on the first assays from 26CRC001 and 26CRC002, which returned **4m @ 9.93 g/t Au** from 207m and **27m @ 1.26 g/t Au** from 180m[2].

Catalyst Metals grows Cinnamon Resource By 370%

Catalyst Metals (ASX: CYL)

Announced an updated Mineral Resource and Ore Reserve for the Cinnamon deposit, located on the Plutonic Gold Belt in Western Australia.

Cinnamon Resource grows 370% underpinning maiden underground Reserve and 7-year LOM at up to 40-50koz pa.

Catalyst Metals' Cinnamon Resource grows 370% underpinning maiden underground Reserve and 7-year LOM at up to 40-50koz pa

Catalyst Metals Limited (Catalyst or the Company) (ASX:CYL) is pleased to announce an updated Mineral Resource and Ore Reserve for the Cinnamon deposit, located on the Plutonic Gold Belt in Western Australia.

This includes a maiden Resource and Reserve for the recently discovered underground zone.

The maiden underground Ore Reserve has been delivered within twelve months of initial discovery. Importantly, the Reserve establishes Cinnamon as the sixth ore source in Catalyst's plan to grow Plutonic Gold Belt production to ±200koz per annum.

Highlights

Further Reserve growth potential from infill drilling of Inferred Resource and ongoing
exploration success
• Cinnamon's Resource is 6.9Mt at 2.5g/t for 541koz – a 370% increase
• This includes an Open Pit and Underground Resource of 2.9Mt at 1.2g/t for 108koz and 4Mt at 3.4g/t for 434koz, respectively
• Within the Underground Resource, is a maiden Underground Reserve of 232koz at 3.0g/t underpinning a life of mine production target with a 7.5 year mine life, reaching steady state annual production of 40-50koz (see Figure 2)
• ***Life of mine AISC are estimated at A$2,357/oz***
• Cinnamon's wide, continuous mineralisation and favourable ground conditions lay the
foundations for lower risk, more efficient bulk scale mining
• Cinnamon is the sixth ore source on the Plutonic Belt in Catalyst's plan to increase production to ±200koz pa – these

ample ore sources will reduce Plutonic’s overall operating risk
• The high-grade Cinnamon shoot is hosted in one of several repeating conglomerate units.
Recent drilling intersected mineralisation in a number of these units demonstrating potential for repeat mineralised zones
• To date, drilling has focussed on infill to delineate a Reserve. Future drilling programs will target these repeat units and seek to grow the deposit
• In September 2025, Catalyst released general 10-year guidance3
. Since then, Catalyst has seen changes to permitting timelines, operational delays and processing capability. It has also seen increases to Reserves and Resources at Cinnamon, Keillor and Trident. Reserves are now in excess of the previously reported 1.5Moz
• As a consequence, the September 2025 guidance should be seen as a general guide as to management’s long-term plans for Plutonic.

Cautionary Statement: The Cinnamon life of mine Production Target contains approximately 74% of Ore Reserves and 26% Inferred Mineral Resource. There is a low level of geological confidence associated with Inferred Mineral Resource and there is no certainty that further exploration work will result in the conversion to Indicated Mineral Resource or that the Production Target itself will be realised.

Catalyst's MD & CEO, James Champion de Crespigny, commented:

"To have moved from discovery to Reserve within 12 months is a credit to our team.

"The existing infrastructure and sunk capital across the belt makes this possible, however the team has turned it into a reality.

"Cinnamon will be a sixth ore source for the Plutonic mill. The width, and continuous nature of the orebody will lend itself to efficient mining of bulk stopes.

"Under our fellow Director Bruce Kay's leadership, this has been a highly successful period of exploration for Catalyst.

"We have recently announced discoveries at Trident and Cinnamon and extensions at Keilor (formerly K2). Reserves, after depletion, have increased from 500koz to 1.5Moz and now beyond in only two years of exploration.

"His guidance, and now with the Company's balance sheet, have ensured Catalyst's long-term success."

Corazon Defines Chalice Exploration Target's Growth Potential

Corazon Mining (ASX: CZN)
Announced a maiden Exploration Target of 9.7 – 12.3Mt at 1.9 – 2.1 g/t Au (approximately 600,000 – 830,000oz contained gold) at its 100%-owned Chalice Gold Project near Higginsville, Western Australia.

Corazon Defines Chalice Exploration Target, Confirms Significant Resource Growth Potential

Go to announcement

HIGHLIGHTS

• **Maiden Exploration Target defined at the Chalice Gold Project** which shows the potential to significantly increase the existing Mineral Resource Estimate on completion of further drilling
• **Target is inclusive of the existing 191,000oz Mineral Resource,** indicating substantial conceptual mineralisation beyond the current Mineral Resource Estimate.
• **Underpinned by ~370 historical drillholes plus extensive underground face and sludge sampling**, defining a mineralised system extending 1.7km along strike and 700m vertically.
• **Target captures near-surface mineralisation for the first time,** extending beyond the underground-only basis of the current Resource.
• **Drill planning is underway, with expectations of drilling to commence** in the coming weeks, with an initial 7,500m RC program to test the geological and grade continuity assumptions.
• **The Exploration Target confirms the scale of the Chalice opportunity** and supports the Company's transition from early-stage explorer to potential WA gold developer.

Figure 1. Plan view mineralisation and the southern strike extension of the Exploration Target at Chalice Gold Project

Go to announcement

Corazon Mining Limited (ASX: CZN) (“Corazon” or the “Company”) is pleased to announce a maiden Exploration Target of 9.7 – 12.3Mt at 1.9 – 2.1 g/t Au (approximately 600,000 – 830,000oz contained gold) at its 100%-owned Chalice Gold Project near Higginsville, Western Australia.

The potential quantity and grade of the Exploration Target is conceptual in nature. There has been insufficient exploration to estimate a Mineral Resource for the additional mineralisation included in the Exploration Target, and it is uncertain if further exploration will result in the estimate of a Mineral Resource.

Corazon Mining Ltd Managing Director, Simon Coyle, commented:

“This Exploration Target confirms what our technical team has suspected since we first reviewed the Chalice database – this is a considerably larger system than the resource we acquired.

“Decades of drilling and underground sampling point clearly to mineralisation extending well beyond the current Resource – both near-surface and at depth.

“There is real work still to do before any of that potential can be converted to a Mineral Resource, and we intend to get on with the drilling required to confirm it.

“There is genuine potential for a substantial high-grade open pit cutback at Chalice – an outcome that, if confirmed through further drilling, could underpin a low-cost mining operation and meaningful cashflow contribution as we work toward advancing Chalice into a development-ready open pit gold mine.”

Kaiser Reef Issue Clarification Statement

ASX RELEASE I 22 AUGUST 2025

Kaiser Reef Limited (ASX:KAU) ("Kaiser" or the "Company") refers to its announcements released on 24 March 2025, 6 May 2025 and 11 August 2025 respectively titled "Investor Presentation" ('Announcement') and retracts the information included in slide 5 (24 March 2025 Announcement), slides 3 and 9 (6 May 2025 Announcement), slides 5, 9 and 12 (11 August 2025 Announcement) respectively and retracts the Resource Life (M&I) statement of +10 years relating to Henty Gold Mine does not meet the requirements of ASX Listing Rule 5.16.

Accordingly, the Company will not include information

determined in this manner in future releases and investors are advised not to rely on the potential mine life information contained in the retracted statement for their investment decisions.

In addition, the Company refers to slide 13 (6 May 2025 Announcement) ,and slide 17 (11 August 2025 Announcement) respectively relating to an Exploration Target for the Maldon Gold Project (Union Hill Mine) and provides the following clarification:
Exploration Target: An Exploration Target is a statement or estimate of the exploration potential of a mineral deposit in a defined geological setting where the statement or estimate, quoted as a range of tonnes and a range of grade (or quality), relates to mineralisation for which there has been insufficient exploration to estimate a Mineral Resource.

The potential quality and grade of the Exploration Target is conceptual in nature and it is uncertain if further exploration will result in the estimation of a Mineral Resource.

Competent Person Statement

The information in this release that relates to the Exploration Target and Mineral Resources for the Maldon Gold Project were first released in the Company's announcements dated 21 July 2022 and subsequently reviewed by Shawn Panton (B.Sc.(HONS)) (Geology), AIG. an employee of Kaiser Reef Limited.

Mr Panton has sufficient experience that is relevant to the style of mineralisation and type of deposit under consideration and to the activity which they are undertaking

to qualify as a Competent Person as defined in the 2012 Edition of the Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves. Mr Panton consents to the inclusion in the report of the matters based on this information in the form and context in which it appears.

Mr Panton holds securities in the Company. The Company confirms that it is not aware of any new information or data that materially affects the information included in the announcement and confirms that all material assumptions and technical parameters underpinning the estimates in the relevant market announcements continue to apply and have not materially changed.

-ENDS

This announcement was approved for release by the Board of Kaiser Reef Limited.

Catalyst Metals Obtains A$100m Revolving Credit Facility

Catalyst Metals (ASX: CYL)

Announced it has agreed a three-year, A$100m revolving credit facility with a syndicate of lenders comprising Westpac, National Australia Bank and Societe Generale.

Catalyst has not, nor does it intend to, draw on the debt facility.

Catalyst Metals Mining, courtesy of Catalyst Metals

	Catalyst Metals	**ASX : CYL**
	Stage	**Exploration / development**
	Metals	**Copper / Gold**
	Market cap	**A$1.19 Billion @ A4.73**
	Location	**Murchison, Western Australia**
	Website	**www.catalystmetals.com.au**

Catalyst Metals obtains A$100m Revolving Credit Facility

Catalyst Metals Limited (Catalyst or the Company) (ASX:CYL) is pleased to announce it has agreed a three-year, A$100m revolving credit facility with a syndicate of lenders comprising Westpac, National Australia Bank and Societe Generale.

Catalyst's recent A$150m placement, existing cash reserves and strong underlying free cashflow places the business is a strong financial position.

This additional, and undrawn, A$100m revolving facility demonstrates the creditworthiness of the business, begins building these important financial relationships and further enhances the company's balance sheet to pursue its growth plans.

Highlights

• Catalyst has signed a Syndicated Facility Agreement with Westpac, National Australia
Bank (NAB) and Societe Generale
• The facility gives Catalyst access to A$100m of financing, should it choose to draw on it
• Catalyst has not, nor does it intend to, draw on the debt facility
• By entering into this facility, Catalyst is not only improving its balance sheet but also
establishing important relationships with highly credible financiers such as NAB,
Westpac and Societe Generale
• The terms of the facility include
o A$100m Revolving Credit Facility (RCF)
o A$10m Contingent Instrument Facility
o No mandatory hedging
o 3-year tenor
• In May 2025, Catalyst completed a A$150m placement to institutional investors
• The facility gives Catalyst further liquidity and provides additional flexibility as the
business grows.

Catalyst's Managing Director & CEO, James Champion de Crespigny, commented:

"Catalyst would like to thank the mining finance teams at

NAB, Westpac and Societe Generale for the work they have put in to executing this facility.

“We place enormous value on these important relationships.

“This support from tier 1 lenders is an important step for Plutonic given it was losing money when Catalyst acquired it two years ago.”

Pacgold Intersects Targeted Broad Zones of Veining

Pacgold (ASX: PGO)

Provided an update on step-out drilling progress on the Central and Southern Targets at the Company's Alice River Gold Project 300km northwest of Cairns, North Queensland.

Pacgold Alice River drilling 11th August 2022

Pacgold	ASX : PGO
Stage	Exploration
Metals	Gold
Market cap	A$23 m @A$ 33c
Location	Queensland, Australia

First 2023 Drilling at the Alice River Southern Target Intersects Broad Zones of Veining Within Targeted IP Anomaly

Pacgold Limited (ASX: PGO) ('Pacgold' or the 'Company') is pleased to provide an update on step-out drilling progress on the Central and Southern Targets at the Company's Alice River Gold Project ('Project'), 300km northwest of Cairns, North Queensland.

To date, 10 diamond drill holes for 2,821.4m have been completed on the Central Target and Southern Targets in the current programme, with samples despatched for five holes and the remaining holes being processed on site and awaiting despatch. Initial assay results are expected in late June.

An additional five reverse circulation (RC) pre-collars for 966m have been completed on the Central Target and are awaiting diamond tails to complete the drill holes to the target depth.

Southern Target Drilling

• Broad zone of veining and alteration intersected over a 50m downhole section
associated with a new IP geophysics anomaly concealed by

shallow cover
sediments (drillhole STDH006 – assay results pending)
• The new IP anomaly extends >400m with potential to link the Southern Target
gold zones over a strike of >1.8km
• Pacgold's 2023 drilling programme represents the first drilling of the Southern
Target under shallow cover in 33 years (first ever with modern IP targeting
assistance)
• Several similar, prospective IP geophysics anomalies occur (under shallow cover)
over at least 2km to the southeast of the Southern Target gold zones and represent
high priority targets for the next phase of drilling

Long section along the Southern Target showing latest drilling (assays pending) and location STDH006 which intersected a broad zone of veining and alteration associated with an IP target concealed by shallow cover sediments.

Potential to link the two main outcropping main Southern Target gold systems over >1.8km.

Central Target Drilling

• Step-out drilling on the F1a Zone continues to deliver, with encouraging veining and
alteration observed in drill core of first 2023 holes (assay results pending)
• Steady stream of drilling assay results expected to flow over June and July.

Pacgold Managing Director Tony Schreck said:

“Pacgold’s 2023 drilling has kicked off strongly.

“We are particularly excited by the broad veining and alteration observed in drillhole STDH006 at the Southern Target, associated with a new, large-scale IP geophysics anomaly completely concealed by shallow cover sediments.

“We believe this new mineralised zone potentially links the two main areas of outcropping high-grade gold mineralisation on the Southern Target.

“This represents a significant advance and validation of our regional and local scale targeting strategy using the IP geophysics, and importantly upgrades the potential of several similar IP geophysics anomalies along strike of the Southern and Central Targets that are planned for drilling this year.”

Southern Target Drilling Update

Drilling on the Southern Target is aimed at investigating the depth and strike extensions of the broad gold system defined by shallow historical drilling and interpreted as a repetition of the Central Target.

Seven holes have been completed by Pacgold as part of the current programme with all drill holes intersecting multiple zones of alteration and veining (assay results pending).

Drillhole STDH006 was completed to investigate a >400m long IP geophysical anomaly comprising a resistivity high within a broad resistivity low (main mineralised corridor) concealed by shallow cover sediments.

STDH006 intersected an encouraging zone of consistent quartz veining and alteration over an approximate 50m downhole width, which is interpreted to be associated with the IP resistivity high anomaly.
