

Barton Gold's Tolmer Yields >100,000 g/t Silver Trial Gravity Concentrate

Barton Gold (ASX: BGD)

Announced the results of a preliminary analysis of sample mineralisation collected from drilling at its high-grade Tolmer Silver prospect, located at its South Australian Tarcoola Gold Project.

Tolmer is one of Australia's highest-grade modern silver discoveries.

**Tolmer Yields >100,000 g/t
Silver Trial Gravity
Concentrate
Metallurgical evaluation
started, follow up drilling
expedited for mid-May**

Barton Gold Holdings Limited (ASX:BGD, OTCQB:BGDFF, FRA:BGD3) (Barton or Company) is pleased to announce the results of a preliminary analysis of sample mineralisation collected from drilling at its high-grade Tolmer Silver prospect (Tolmer), located at its South Australian Tarcoola Gold Project (Tarcoola).

Tolmer is one of Australia's highest-grade modern silver discoveries, identified during 2025 in a discovery hole which yielded a peak intersection of 6m @ 4,747 g/t Ag (plus 4m @ 13.2 g/t Au).

HIGHLIGHTS

- Preliminary test yields high-grade concentrate grading over 100,000 g/t Ag (10% silver)
- Trial concentrate to support preliminary evaluation of Tolmer petrology and paragenesis utilising scanning electron microscopy (SEM); leading geological consultant engaged
- ~4,000m follow up drilling expedited for May 2026 to infill high-grade assays, test extensions.

The mineralisation from this hole has now been dried, washed with a basic detergent, and panned to produce a concentrate for evaluation utilising scanning electron microscopy, which will assist in designing a full metallurgical testwork program.

This test has produced a concentrate grading >100,000 g/t Ag (~10% silver) from a simple gravity process, without any grinding, roasting or the use of chemical reagents.

The ability to produce exceptionally high-grade concentrates without hydrometallurgical or pyrometallurgical processes could have potential implications for low-cost, high-margin operations if this is consistent for the mineralisation.

Barton has now expedited a ~4,000m RC drilling follow up program, anticipated to begin mid-May 2026.

The objective is to further develop Tolmer's local geological knowledge, infill data, and test potential extensions indicated by soil assays around numerous drill intercepts exceeding 2,000 gram-metres Ag.

N.B

Barton notes the above results are from a subsample of prepared materials and are not representative of all Tolmer mineralisation.

Comprehensive quantitative metallurgical testwork is required to evaluate potential commercial viability. Barton has engaged a leading geological consultant to conduct a preliminary evaluation of this Tolmer mineralisation and assist in the design of a detailed metallurgical testwork program.

Barton MD Alexander Scanlon Commented,

"We are excited to receive these exceptional preliminary concentration results.

"There is clearly something very different going on at Tolmer, not only in terms of the degree of silver enrichment in the oxide and transitional zones, but also as to the dominant presence of primary silver in the veining below the 'western silver zone' observed in recent drilling.

"This is entirely distinct from the rest of the Tarcoola Goldfield, where gold is dominant, and raises exciting possibilities.

"Detailed metallurgical testwork is now required, but the prospective ability to concentrate Tolmer's silver from just a simple, gravity based process is also exciting.

“For context, one tonne of concentrate grading over 100,000 g/t Ag would today contain over \$300,000 worth of silver – before attributing any value for contained gold by-product credits.

“Our emerging silver portfolio is a potentially significant contributor to our regional strategy. We are excited to now be accelerating our Tolmer investigation in parallel with programs to upgrade our Tolmer gold and silver Resources.”

Mining Review 26th April 2026

[Mining Review 26th April 2026](#)

News from our watchlist companies this week was dominated by Australia, with Barton Gold, Kaiser Reef, and Ora Banda all reporting good drilling results.

Heliostar Metals also reported high-grade drill results at their Ana Paula Mexican gold project.

City Investors Circle

City Investors Circle Mining Review 26th April 2026

There was plenty of positive news releases made by companies on our watchlists this week, dominated by Australia, with **Barton Gold**, **Kaiser Reef**, and **Ora Banda** all reporting good drilling results.

Heliostar Metals also reported high-grade drill results at their Ana Paula Mexican gold project.

Meeka Metals announced a gold acquisition at Mt Holland, and **Lahontan Gold** reported positive cyanide recoveries for gold and silver.

All in all a good week for news, although market and gold price volatility meant this positivity wasn't reflected in the share prices of the companies concerned.

Patience isn't just a virtue, it's a necessity in this mining investment game.

Barton Gold's First Challenger Assays Return Grades up to 170g/t Au

New zones of high-grade mineralisation identified in open pit walls

[Barton Gold Holdings Limited \(ASX:BGD, OTCQB:BGDFF, FRA:BGD3\)](http://www.bartongold.com.au)

(Barton or Company) is pleased to announce initial assay results from recent drilling at its South Australian Challenger Gold Project (Challenger).

HIGHLIGHTS

- 8,065m reverse circulation (RC) Resource upgrade drilling recently completed at Challenger 'Main', 'Challenger West' (CW) open pits, and 'Challenger South-Southwest' (CSSW) and 'Challenger 3' targets
- Challenger's 'Main' open pit operated during 2002 – 2004; drilling has identified new highgrade mineralisation in the open pit's walls and extensions, where new assays include:

Hole ID Interval Including:

CHB0140 9m @ 2.20 g/t Au from 97 metres 1m @ 6.63 g/t Au from 103 metres

CHB0158 11m @ 5.67 g/t Au from 24 metres

10m @ 17.7 g/t Au from 40 metres

1m @ 50.9 g/t Au from 27 metres

1m @ 170.7 g/t Au from 43 metres

CHB0159 14m @ 1.01 g/t Au from 19 metres

3m @ 4.72 g/t Au from 40 metres

3m @ 2.55 g/t Au from 22 metres

1m @ 11.8 g/t Au from 40 metres

CHB0165 3m @ 6.85 g/t Au from 121 metres 1m @ 15.0 g/t Au from 121 metres

- Further assays pending for the CW open pit, and the CSSW and Challenger 3 open pit targets
- Challenger DFS underway targeting a viable, simplified 'baseline' Stage 1 operation to underwrite restart of CGM and maximise Challenger, Tarcoola, Wudinna and Tolmer development optionality.

Challenger is the site of the Company's fully permitted Central Gawler Mill (CGM). A Definitive Feasibility Study (DFS) is underway targeting an initial 3 – 4 year Stage 1 'baseline' operation utilising only historical higher-grade tailings from tailings storage facility 1 (TSF1) and limited, near-surface materials without disturbing Challenger's historical high-grade underground mine, its mineralisation or its infrastructure access.

Commenting on the first Challenger assay results, Barton Managing Director Alexander Scanlon said:

"The Challenger open pit operated from 2002 to 2004, at a time of record low gold prices. Our drilling has been targeting 1-2 g/t Au mineralisation on open pit extensions to provide a source of lower-risk feed for Stage 1 operations.

"We were therefore surprised to find much higher-grade mineralisation than expected – up to 170 g/t Au – in previously unmodelled extensions of mineralisation immediately adjacent to the open pit.

"This mineralisation has not previously been drilled and is not closed off, indicating potential for further extensions and additional near-pit discoveries.

"This kind of on-pit, near-surface mineralisation adjacent to our existing Central Gawler Mill provides ideal low-risk feed to de-risk an operational restart at Challenger. We look

forward to sharing further Challenger assays soon.”

Barton Gold Challenger DFS Pit Optimisation Drilling

Complete

[Barton Gold Holdings Limited \(ASX:BGD, OTCQB:BGDFF, FRA:BGD3\)](#) (Barton or Company) is pleased to confirm the completion of pit optimisation drilling at its South Australian Challenger Gold Project (Challenger), adjacent to its wholly-owned Central Gawler Mill (CGM). Foraco Drilling was engaged to complete the program.

A total 1,322m diamond drilling (DD) was completed across 23 holes to generate additional geotechnical data and sample materials for metallurgical testwork. These analyses will support the optimisation of Challenger open pit designs and operations. Together with 8,065m of recently completed RC drilling, Barton is targeting conversion of existing open pit mineralisation (and new near-surface targets), to JORC (2012) 'Indicated' Resources and, subject to the completion of a Definitive Feasibility Study (DFS), to 'Ore Reserves'.

The design concept of the DFS is to target an initial 3 – 4 year Stage 1 'baseline' operation utilising only historical higher-grade tailings from tailings storage facility 1 (TSF1) and limited, near-surface materials without disturbing Challenger's historical high-grade underground mine, its mineralisation or its infrastructure access.

Targeting Initial 'Stage 1' DFS & Ore Reserves conversion by H2 CY 2026

HIGHLIGHTS

- DFS underway following dual Challenger JORC (2012) Mineral Resources upgrades to 313koz Au, targeting JORC (2012) Ore Reserves conversion and a 'Stage 1' DFS by H2 CY 2026
- DFS objective to model a viable, simplified 'baseline' Stage 1 operation to underwrite restart of CGM and maximise Challenger, Tarcoola, Wudinna & Tolmer development optionality
- Following the recent completion of 8,065m reverse circulation (RC) Resource upgrade drilling, a total of 1,322m diamond drilling (DD) completed for open pit design and metallurgical optimisation
- First assays from recently completed Resource upgrade RC drilling expected imminently

Commenting on Challenger's development drilling programs, Barton MD Alexander Scanlon said:

"We are pleased to have completed this program in support of Challenger's ongoing DFS, and we thank Foraco Drilling for their safe execution despite the challenges of recent extreme rains across outback South Australia.

"Challenger's significant open pit and near-surface gold mineralisation, immediately adjacent to our existing Central Gawler Mill, provides an ideal foundation for an initial 'baseline' operation that underwrites a lower-risk restart while maximising development optionality across the

Challenger underground mine, Tarcoola, Tolmer and Wudinna.

“Foraco will now move on to development drilling programs at our neighbouring large-scale Tunkillia Gold Project.”

Barton Gold Begin Tunkillia Phase 2 Resource Upgrade Drilling

[Barton Gold \(ASX: BGD\)](#)

Announced the start of 'Phase 2' JORC (2012) Mineral Resource upgrade drilling at its South Australian Tunkillia Gold Project (Tunkillia).

Strike Drilling has been engaged to complete a program totalling ~30,000m.

Tunkillia drilling – Credits Barton Gold

	Barton Gold	ASX: BGD
	Stage	Production, development
	Metals	Gold
	Market Cap	A\$223 Million @A\$0.93
	Location	South Australia
	Website	www.bartongold.com.au

Barton Gold Tunkillia 'Phase 2' Resource Upgrade Drilling Begins

Targeting Ore Reserves, PFS & ML application by the end of 2026

Barton Gold Holdings Limited (ASX:BGD, OTCQB:BGDFF, FRA:BGD3) (Barton or Company) is pleased to announce the start of 'Phase 2' JORC (2012) Mineral Resource upgrade drilling at its South Australian Tunkillia Gold Project (Tunkillia).

Strike Drilling has been engaged to complete a program totalling ~30,000m.

HIGHLIGHTS

- May 2025 Optimised Scoping Study (OSS) outlined a compelling Tunkillia development project:
 - o Annual production: ~120,000oz gold and ~250,000oz silver
 - o Total LoM operating cash: ~A\$2.7 billion (unlevered, pre-tax)
 - o Net Present Value (NPV7.5%): ~A\$1.4 billion (unlevered, pre-tax)
 - o Internal Rate of Return (IRR): ~73.2% (unlevered, pre-tax); and
 - o Payback period: ~0.8 years (unlevered, pre-tax)
- Barton expediting Tunkillia toward Mining Lease (ML) application, with AUD gold and silver prices now over \$2,000/oz and \$60/oz higher (respectively) than used for OSS

revenue estimates

- 18,900m 'Phase 1' reverse circulation (RC) Resource upgrade drilling infilled high value S1 / S2 pit areas with broad high-grade intersections, supporting rapid payback in early 'Starter pit'2
- ~30,000m 'Phase 2' RC upgrade drilling now underway targeting balance of optimised open pits;
- Phase 2 RC drilling a key step to support JORC (2012) Mineral Resource upgrades and target JORC (2012) Ore Reserves, a pre-feasibility study (PFS), and an ML application by end of 2026.

Tunkillia's Phase 2 RC upgrade drilling follows a successful 'Phase 1' program which infilled the high-value early 'S1' and 'S2' pit areas, modelled to produce ~\$1.3 billion operating profit during the first 2.5 years of operation, with broad, high-grade intersections.

Barton is targeting conversion of all of Tunkillia's OSS modelled open pit mineralisation to JORC (2012) 'Measured' and 'Indicated' categories to accelerate financing and development.

Barton MD Alexander Scanlon commented;

"The Tunkillia OSS demonstrated the financial and capital leverage available to large-scale bulk processing operations, with the major advantage of a higher-grade 'Starter Pit' that can pay back development costs 2x over in the first year –

assuming A\$5,000/oz gold and A\$50/oz silver prices.

“At current gold and silver prices, Tunkillia would be modelled to produce over \$1 billion operating profit in the first year, and over \$2 billion operating profit in the first two years.

“Our recent ‘Phase 1’ Resource upgrade drilling results further confirmed the mineralisation behind these compelling economics; we are therefore now executing the balance of Tunkillia development drilling programs on an expedited timeline, targeting declared JORC Ore Reserves, a robust PFS, and a Mining Lease application by the end of 2026.

.

“Following the submission of our Mining Lease application, we will expedite Tunkillia’s project finance discussions and work with all key stakeholders including the South Australian Government to bring Tunkillia online as soon as possible.

“This project can generate substantial economic benefits for Barton and all of our stakeholders, including the State.”

Barton Gold Begins The 2026 Tunkillia Drilling Program

Barton Gold (ASX: BGD)

Announced the start of water bore drilling at its South Australian Tunkillia Gold Project.

Underdale Drillers has been engaged to complete a program totalling ~900m drilling for preliminary water testing, where success in locating additional sources of nearby water has the potential to both de-risk and improve project economics.

	Barton Gold	ASX: BGD
	Stage	Production, development
	Metals	Gold
	Market Cap	A\$264 Million @A\$1.11

	Website	www.bartongold.com.au

Barton Gold Begins The 2026 Tunkillia Drilling Program

Targeting Ore Reserves, PFS and ML application by the end of 2026

Barton Gold Holdings Limited (ASX:BGD, OTCQB:BGDFF, FRA:BGD3) (Barton or Company) is pleased to announce the start of water bore drilling at its South Australian Tunkillia Gold Project (Tunkillia).

Underdale Drillers has been engaged to complete a program totalling ~900m drilling for preliminary water testing. Success in locating additional sources of nearby water has the potential to both de-risk and improve project economics.

Barton is also pleased to confirm that Tunkillia's planned second phase JORC (2012) **Mineral Resource upgrade** drilling will start as planned during March 2026, with ~28,000m RC drilling targeting the conversion of the balance of Tunkillia's OSS modelled open pit mineralisation (beyond S1 / S2) to JORC (2012) 'Indicated' category.

A ~3,000m diamond drilling (DD) program is planned to run in parallel with phase 2 RC drilling, targeting the infill and expansion of Tunkillia's geotechnical and metallurgical databases in support of further open pit design optimisation,

detailed recovery and production modelling, and a PFS and ML application by the end of 2026.

HIGHLIGHTS

- May 2025 Optimised Scoping Study (OSS) outlined a compelling Tunkillia development project:
 - o Annual production: ~120,000oz gold and ~250,000oz silver
 - o Total LOM operating cash: ~A\$2.7 billion (unlevered, pre-tax)
 - o Net Present Value (NPV7.5%): ~A\$1.4 billion (unlevered, pre-tax)
 - o Internal Rate of Return (IRR): ~73.2% (unlevered, pre-tax); and
 - o Payback period: ~0.8 years (unlevered, pre-tax)
- Barton expediting Tunkillia toward Mining Lease (ML) application, with AUD gold and silver prices now over \$1,500/oz and \$50/oz higher (respectively) than used for OSS revenue estimates
- ~900m water drilling has started, targeting potential new water sources near OSS open pits
- ~28,000m second phase reverse circulation (RC) Resource upgrade drilling to begin March 2026, with ~3,000m Resource, geotechnical & metallurgical diamond drilling (DD) to start in parallel
- Targeting JORC (2012) Ore Reserves, pre-feasibility study (PFS) & ML application by end of 2026

Barton MD Alexander Scanlon Commented on Tunkillia's 2026 drilling programs,

"The Tunkillia OSS demonstrated the financial and capital leverage available to large-scale bulk processing operations, with the major advantage of a higher-grade 'Starter Pit' that can pay back development costs 2x over in the first year.

"With recent Resource upgrade drilling results further de-risking this profile, we are advancing our other development drilling programs in support of planned JORC Ore Reserves, a PFS, and a Mining Lease application by the end of 2026.

"Following the submission of our Mining Lease application, we will expedite Tunkillia's project finance discussions in parallel with our targeted reinstatement of 'Stage 1' operations at our neighbouring Challenger Gold Project.

"Our objective is to bring Tunkillia online as soon as possible to realise our gold production target of 150,000oz annually."

Barton Gold CEO Sends a Positive Message for 2026

Dear Investors & Colleagues,

I hope this mail finds you well, enjoying the holidays with friends and family, and looking forward to an exciting 2026. What a massive year it has been for Barton.

2025 has been transformational in all respects, with several notable project and corporate achievements jointly symbolising the 'pivot point' between the last 5 years of 'building our thesis', and the next 5 years of 'executing our plan' and realising the value of the platform we have methodically and [very] cost-efficiently assembled.

These include:

Exploration & Development

- Tunkillia Resources growth to [1.6Moz Au](#) and an [Optimised Scoping Study](#) (OSS) for a ~120kozpa gold project with a 73% IRR and sub- 1 year payback;
- Recent upgrade drilling infilling Tunkillia's key S1 'Starter Pit' with [broad, high-grade assays](#), de-risking this financial profile and project development;
 - Dual Resource upgrades to [+300koz Au](#) at Challenger, a [low-cost restart](#) estimate, and [start of a DFS](#) targeting 2026 start of works at our existing mill;
- dual [discoveries at the 'Tolmer' prospect](#), with grades up to 83.6g/t Au and 17,600g/t Ag in one of Australia's highest grade modern silver discoveries; and
 - a high-resolution gravity targeting repeats of [high-grade quartz vein lodes at Challenger](#) which historically produced ~1.2Moz gold (results pending);

Corporate

- over \$9m FY25 revenues and our first ever [half yearly profit of \\$3.1m](#);
- [Wudinna's acquisition](#) for [high-grade feed](#) to the CGM and Tunkillia mills;
 - BGD's addition to the S&P Global [ASX 'All Ordinaries' Index](#); and
 - a [Placement led by Franklin Templeton completed](#) at \$1.25 per share.

We are also now collectively witnessing concrete evidence of the once-in-a-generation paradigm shifts in global monetary, trade and geopolitical structures that I / we / Barton have been discussing in our general economic commentary for several years now.

We are therefore not surprised to see gold significantly outperforming [UBS's June 2024 forecast for USD \\$2,800 / A\\$4,000 by the end of 2025](#). Widely ridiculed at the time as sensationalist, UBS now sees [USD \\$5,000 gold by September 2026](#) – a perhaps relatively sober outlook given the aforementioned ongoing global macro / structural evolution, and that this would represent only a further ~15% gain from current levels.

Our strategy to rapidly scale Barton's development options and prepare it for low-cost commercialisation ahead of these anticipated market innovations is therefore at least timely in its execution, if not prescient in its design. Either way, we and our strategy are now well positioned, and the market is becoming increasingly aware of it.

Growing awareness of our performance, and of these global trends, has seen BGD close trade today at \$1.32, just shy of our all time high, on unusually high trading volumes for this time of year. ***This represents a 426% gain for the year and substantial 'alpha' generated – outperforming producers (GDXJ) by a factor of 2.6 to 1, and gold itself by 6.6 to 1.***

2026 will be about leaning into the momentum we have generated, continuing to build this market awareness of our story, commercialising the platform we have assembled, and placing Barton on track to realise our vision of developing South Australia's largest independent pure-play gold producer.

Among many other goals for 2026, we aim to:

- complete nearly 50,000 metres of drilling at Challenger, Tunkillia and Tolmer's silver discovery, targeting multiple JORC upgrades across these projects;
- deliver a DFS, finance and start of site works for 'Stage 1' Challenger operations;
- deliver a PFS, JORC Ore Reserves and a Mining Lease application for Tunkillia; and
 - extend our track record of low dilution and creative asset monetisation.

"With Challenger gravity survey results and several Tunkillia drilling assays outstanding, we expect to start 2026 with significant early news flow which will grow steadily as we execute and report on these many and multi-faceted efforts.

"I look forward to sharing numerous updates as we move through an exciting 2026. As always, we are honoured to have your support, and will continue to work as hard for your investment as you did. Wishing you all the best for a healthy, safe and prosperous 2026"

Alexander Scanlon – Managing Director & CEO

Comment

I have to admit, of all the stocks on my watchlist ,and in my current portfolio, Barton is my number one selection for having the most potential to create shareholder value in 2026.

The company has a strong management team that are quietly achieving their objectives moving towards the first phase of a two phase production schedule.

They are refurbishing an existing mill for a small capex, and are looking to commence gold production at the end of 2026, or the beginning of 2027.

For that reason, provided the gold price remains high around current levels, or higher of course, I see Barton climbing towards the production peak on the Lassonde Curve later this year.

Phase 2 production is three years away, when the company hope to produce 150,000 ounces of gold production per annum, which will produce a massive profit if the gold price remains high.

Management own 21% of the stock, and institutions 36%, a good sign of confidence in the project and management.

Management visit Europe frequently, I meet CEO Alex Scanlon whenever he comes, he's very communicative, which is another tick in the box for my personal criteria.

=====

Stocks to watch in 2026 – Barton Gold

Barton Gold is due to enter production in late 2026 at its Gowler Mill in South Australia.

Barton is an active company and management are targeting 150,000 Oz gold production annually in the future.

The company are entering a two phase production plan, with a first stage due to enter production late 2026, early 2027. I personally always allow for some slippage in the timeline as mining is a complicated business.

The mill is fully permitted, and therefore I don't expect too many challenges for the restart.

Phase 1

Involves reprocessing historic tailings, which provides a low cost entry to production. I like tailings projects, the hard work has already been done, they sit on surface, not in the ground, and new technology makes it possible to produce from what's left over from their original processing.

Highlights

A DFS is due in March 2026.

Mill commissioning, and phase 1 operations are due to commence at the end of 2026.

Capex A\$26 million.

Mill capacity will be between 600 and 650 ktpa.

Future Plans

Barton's long term target after phase 2 is initiated is to produce 250,000 ounces of gold per annum.

Phase 1 production is designed to give Barton a chance to earn early cashflow as the longer term plans develop.

[The latest Barton Gold Corporate presentation can be viewed
HERE](#)

In conclusion, I believe Barton Gold will deliver, the risk level looks at the lower end of the scale, being a tailings project to be processed at a refurbished mill, with low capex.

One to watch during 2026, especially as production startup approaches, as I expect the normal Lasso Curve rules of shareholder value creation to apply as production approaches.

Barton Gold High Resolution Gravity Survey Targets Challenger Repeats

Targeting near-mine indications of high-grade quartz vein lodes

Barton Gold Holdings Limited (ASX:BGD, OTCQB:BGDFF, FRA:BGD3) (Barton or Company) is pleased to confirm the start of a high resolution airborne gravity survey surrounding its South Australian Challenger Gold Project (Challenger).

The program is part of Barton's research and development (R&D)

initiatives

trialling various technologies in historically under-explored terrain to define new geological models.

HIGHLIGHTS

- High resolution survey over northern portion of EL 6502, which hosts the Challenger Gold Mine
- Targeting gravity anomalies indicative of structures similar to Challenger's high-grade gold lodes

Barton Managing Director Alexander Scanlon said:

“With a DFS underway for the phased restart of operations at Challenger, leveraging our Central Gawler Mill, we are diligently pursuing our regional enhancement strategy.

“This includes not only our Tarcoola and Wudinna blending feed projects, but also the potential for near-mine repeats of Challenger's high-grade quartz vein lodes.

“Challenger was developed during a period of record low gold prices, and as such historical investment favoured rapid development over local exploration. With existing infrastructure, new discoveries could be highly valuable.”

Barton Gold Reports Broad, High-Grade Assays Infill Tunkillia 'S1' Pit Area

Results emphasise Tunkillia grade potential in key features

Barton Gold Holdings Limited (ASX:BGD, OTCQB:BGDFF, FRA:BGD3) (Barton or Company) is pleased to announce first assay results from recent drilling at its South Australian Tunkillia Gold Project (Tunkillia).

These assays confirm broad new intervals of high-grade gold

mineralisation which infill the central portion of Tunkillia's S1 'Starter Pit', emphasising the high-value nature of this zone to Tunkillia's development. Commenting on the new Tunkillia assay results,

HIGHLIGHTS

- New assays support higher-grade model for Tunkillia S1 'Starter Pit' mineralisation; infill drilling targeting conversion to JORC (2012) 'Measured' category to underwrite financing.
- Tunkillia 'S1' pit modelled to produce \$825m operating profit in first year of operations from average grade of 1.19 g/t Au – new broad, high-grade assays from this zone include:

Hole ID Interval Including:

TKB0267 14m @ 2.78 g/t Au from 88 metres 3m @ 6.97 g/t Au from 98 metres

TKB0269 28m @ 2.60 g/t Au from 129 metres 2m @ 20.9 g/t Au from 144 metres

TKB0282 27m @ 2.68 g/t Au from 60 metres, and

44m @ 3.68 g/t Au from 103 metres

2m @ 38.7 g/t Au from 73 metres

3m @ 23.5 g/t Au from 123 metres

TKB0285 47m @ 2.67 g/t Au from 97 metres 16m @ 5.03 g/t Au from 126 metres

TKB0292 41m @ 2.21 g/t Au from 47 metres 7m @ 9.61 g/t Au from 47 metres

TKB0301 10m @ 7.37 g/t Au from 65 metres 1m @ 28.8 g/t Au from 67 metres

TKB0306 10m @ 5.03 g/t Au from 152 metres, and

13m @ 3.75 g/t Au from 165 metres

1m @ 43.2 g/t Au from 154 metres

1m @ 37.1 g/t Au from 165 metres

- *Balance of assays from recent Tunkillia 'Phase 1' upgrade drilling expected during December 2025 and January 2026, with updated JORC (2012) Mineral Resource Estimate by March 2026*

Barton Managing Director Alexander Scanlon said:

"Tunkillia's S1 pit contains the project's highest grade mineralisation, ideally located in a shallower, central zone.

"Modelling indicates that this will yield over 200,000 gold ounces, generating over \$800 million in operating free cash and paying back Tunkillia's entire development cost more than 2x over during the first year of operations.

"This early phase of upgrade drilling was therefore designed to further de-risk this profile by infilling higher grade mineralisation to underwrite project finance.

"These results very much appear to support that objective, and also highlight the potential for the Tunkillia system to host very high grades within key structural features.

"We expect the balance of Phase 1 infill drilling assays by

January, and are targeting the conversion of Tunkillia's 'S1' and 'S2' optimised open pit mineralisation to JORC 'Measured' and 'Indicated' categories by March 2026."

Barton Gold Tunkillia Upgrade Drilling – 18,900m Phase 1 Complete

First assays from highest value 'S1' area expected imminently

Barton Gold Holdings Limited (ASX:BGD, OTCQB:BGDFF, FRA:BGD3) (Barton or Company) is pleased to confirm that upgrade drilling for the S1 and S2 pits at its South Australian Tunkillia Gold Project (Tunkillia) has completed ahead of schedule and under budget, with 18,893m drilled across 209 holes and 62 days.

Tunkillia's S1 'Starter Pit' is modelled to yield 206koz Au at a cost of only A\$997 / oz, producing over A\$800m operating cash and repaying development 2x over during the first year of operations.

HIGHLIGHTS

- Phase 1 reverse circulation (RC) upgrade drilling on Tunkillia's high value 'Starter Pits' complete

- Drilling completed ahead of schedule and under budget, with over 300m completed per day

Barton Managing Director Alex Scanlon commented;

“Tunkillia’s S1 pit area contains the project’s highest grades in a shallow central zone. Modelling indicates that the S1 pit will pay back Tunkillia’s entire development cost more than 2x over during the first year of operations.

“Having been approached by multiple prospective development and finance partners, upgrading this area to JORC ‘Measured’ category will underwrite confidence in this profile while we evaluate the optimal path forward.

“We would like to recognise and thank Raglan Drilling for their professionalism and coordination with the Barton Gold team, delivering this Phase 1 drilling program safely, under budget, and well ahead of schedule.”

Barton Gold Tunkillia Upgrade Drilling – Update

Program advancing rapidly, ahead of schedule and under budget

Barton Gold Holdings Limited (ASX:BGD, OTCQB:BGDFF, FRA:BGD3) (Barton or Company) is pleased to confirm that upgrade drilling for the 'Starter Pits' at its South Australian Tunkillia Gold Project (Tunkillia) is progressing ahead of schedule and under budget, with approximately 2/3 of the current ~18,000m program now complete.

Assuming revenues based upon a gold price of AUD \$5,000 / ounce, the 'Stage 1' and 'Stage 2' optimised open pit areas are modelled to yield 365koz Au and A\$1.3bn operating profit during Tunkillia's first ~2.5 years alone.

HIGHLIGHTS

- Reverse circulation (RC) upgrade drilling on high value 'Starter Pits' ahead of schedule, 2/3 complete
- First assays from highest value 'Stage 1' area anticipated to be received during the coming weeks

Assuming revenues based upon a gold price of AUD \$5,000 / ounce, the 'Stage 1' and 'Stage 2' optimised open pit areas are modelled to yield 365koz Au and A\$1.3bn operating profit during Tunkillia's first ~2.5 years alone.

Estimated 'Starter Pits' cash flows are modelled to repay development more than 2x over during the first year of operations, and more than 3x over during the first 2 years,

offering an attractive credit financing profile.

This initial round of drilling is therefore designed to convert these two pit areas to JORC (2012) 'Measured' and 'Indicated' categories, reinforce modelling confidence and support expedited project financing discussions.

Barton Managing Director Alex Scanlon said:

"We are pleased to confirm that the first phase of Tunkillia upgrade drilling is progressing well, ahead of schedule and under budget, with contractors Raglan Drilling consistently delivering an average of over 300 metres drilling per day.

"Prior drilling in the 'Starter Pits' area has typically returned Tunkillia's highest grades. Our modelling that indicates that these pits can deliver a payback period of less than 1 year in operations, offering a very attractive credit profile."

Barton Gold Starts Geotechnical Drilling at Central Gawler Mill

Results to inform detailed TSF1 mine design, schedule and costs

Barton Gold Holdings Limited (ASX:BGD, OTCQB:BGDFF, FRA:BGD3) (Barton or the Company) is pleased to confirm that geotechnical drilling has started in support of a recently launched Definitive Feasibility Study for 'Stage 1' production (Stage 1 DFS) at the Company's South Australian Challenger Gold Project (Challenger).

The planned program includes 5 sonic drilling holes to recover TSF1 materials for laboratory testing, 24 holes for Cone

Penetration Testing (CPTu) and further laboratory testing, and 3 holes for push tube density testing.

The program is expected to take three weeks to complete, with the results to inform the dry recovery of TSF1 tailings materials, detailed mine design, a mining schedule and estimate of mining costs for the Stage 1 DFS.

Barton Managing Director Alexander Scanlon commented;

“With the Stage 1 DFS now underway, we are excited to kick off the first of several production-related work programs that will inform key elements of mine design, scheduling, equipment selection and operating costs for tailings recovery.

“Following a \$15m placement led by Franklin Templeton, Barton is well funded to advance the restart of operations at its Central Gawler Mill, with approximately \$20m cash in the bank and credit financing discussions underway.

“We are now on the road to production, leveraging our fully permitted Central Gawler Mill to operations and growth.

“This is an invaluable stepping stone for our vision to become South Australia’s largest independent gold producer.”

City Investors Circle Mining Review 12th October 2025

[Mining Review 12th October 2025](#)

Orla Mining announced a potential significant discovery at Musselwhite.

Capricorn Metals and **Erdene Resource Development** both announced updated resources in a generally positive week for

mining stocks.

The price of **gold** holding above \$4,000 and **silver** reaching an all time high kept the price of most producing precious metal mining companies near their recent highs. Some Australian companies lost around 5% in Friday trading due to a fall in the gold price, only for that to reverse later in the day, benefitting TSX listed stocks.

The price of **copper** remains around recent highs, and **tungsten** is still strong due to its military applications.

My portfolio suffered a bit of pain this past week as some mining stocks, even gold producers, fell away badly after the gold price appeared to top out and fall back.

The late rally past \$4,000 will, hopefully, mean a strong day on the ASX on Monday, and that may restore some of the Friday losses on that market. My portfolio was at an all-time high just before the pullback.

I met management from **Stallion Uranium** and made a small investment afterwards as the company are well funded, have prospective ground in the Athabasca Basin, and have a drill program scheduled to commence in January.

**Barton Gold Definitive Feasibility Study Begins for ‘Stage 1’
Production Targeting Phase 1 commissioning by the end of 2026**

Barton Gold Holdings Limited (ASX:BGD, OTCQB:BGDFF, FRA:BGD3)

(Barton or Company) is pleased to announce that a Definitive Feasibility Study (DFS) has started, targeting 'Stage 1' production utilising the fully permitted Central Gawler Mill (CGM) located at Barton's South Australian Challenger Gold Project (Challenger).

The JORC (2012) Mineral Resource Estimate (MRE) for Challenger was recently upgraded to 313koz Au, including 194koz Au high-grade fresh ore (~3.2 g/t Au) in or adjacent to existing serviceable open pit and underground development, and an historical Tailings Storage Facility 1 (TSF1) containing 56koz Au at a grade of 0.54 g/t Au.

Barton is targeting March 2026 DFS completion and end of 2026 CGM commissioning, with 'Phase 1' operations reprocessing TSF1 materials, and 'Phase 2' then introducing fresh ore.

HIGHLIGHTS

- Existing fully permitted Central Gawler Mill adjacent to brownfield Challenger mines¹
- Challenger JORC (2012) Mineral Resources Estimate now 313koz Au (10.6Mt @ 0.92 g/t), including 194koz Au (1.87Mt @ 3.23 g/t) in existing open pit and underground mines, where:
 - o Challenger Main Open Pit: 70,000oz Au (0.65Mt @ 3.36 g/t Au);
 - o Challenger West Open pit: 11,600oz Au (0.03Mt @ 10.7 g/t Au);
 - o Challenger Underground (above 215mRL): 89,400oz Au (0.98Mt @ 2.84 g/t Au); and
 - o Challenger Deeps (below 90mRL): 23,000oz Au (0.21Mt @ 3.50 g/t Au).
- Historical tailings storage facility with coarse, higher-grade tailings up to 0.6 – 1.0 g/t Au²
- Evaluating de-risked, two phase transition to operations with initial tailings reprocessing

('Phase 1') followed by the introduction of high-grade (~3 g/t) fresh ore ('Phase 2')

- Targeting Phase 1 commissioning by end of 2026; credit finance conversations underway

Barton Managing Director Alexander Scanlon commented,

"With gold prices at all-time highs and over 300koz Au JORC Resources adjacent to the Central Gawler Mill, the opportunity to leverage our existing infrastructure to operations and cash flow has never been more attractive.

"We are wasting no time pursuing this opportunity, targeting a low-cost and low-risk transition to operations by the end of 2026, the re-rating of Barton's equity to a 'producer' profile, and operating free cash flows to fund our planned regional growth at Tunkillia.

We look forward to sharing regular updates during an exciting 18 months ahead."

Barton Gold's Soil Assays Indicate Extensions and New Targets

[Barton Gold \(ASX:BGD\)](#)

Announced the assay results of ultrafine soil sampling programs completed at the Tolmer and Black Oak Tank prospects of its South Australian Tarcoola Gold Project.

These showed extensions of the high-grade 'western silver zone', and similar new previously untested targets located

between the 'western silver zone' and the 'eastern gold zone.'

	Barton Gold	ASX: BGD
	Stage	Production, development
	Metals	Gold
	Market Cap	A\$203 Million @A\$0. 90
	Location	South Australia
	Website	www.bartongold.com.au

Barton Gold's New Soil Assays Indicate Extensions and New Targets at Tolmer

Barton Gold Holdings Limited (ASX:BGD, OTCQB:BGDFF, FRA:BGD3) (Barton or Company) is pleased to announce the assay results of ultrafine soil sampling programs completed at the Tolmer and Black Oak Tank prospects of its South Australian Tarcoola Gold Project (Tarcoola).

New assay results for these programs indicate potential for:

- o Tolmer: extensions of the high-grade 'western silver zone', and similar new previously untested targets located between the 'western silver zone' and the 'eastern gold zone'; and
- o Black Oak Tank: potential for interpreted structures to host continuous gold mineralisation.

Samples were collected during July 2025 over a ~1.9km² surface area surrounding the Tolmer gold and silver discoveries, along with a ~23km² area covering the LLSZ, both located on the Company's Tarcoola tenements.

Barton Managing Director Alexander Scanlon Commented;

“These assays provide the first hints as to orientation at Tolmer, indicating a potential overall northwest-southeast trend to the western silver zone and the potential for material extensions of its high-grade silver-gold footprint.

“We have also identified potential new opportunities located between the ‘western silver’ and ‘eastern gold’ zones, where coincident Au-Ag-Pb anomalies present secondary targets analogous to the more prominent footprint of the ‘western silver zone’.

“We expect that pending assays from our recent diamond drilling program in the ‘eastern gold zone’ will materially assist our interpretation of local structural controls, and guide follow up drilling targeting.”

Barton Gold 'Stage 1' Resources at Central Gawler Mill Pass 300koz Au

Feasibility studies to begin shortly | Targeting operations by end of 2026

Barton Gold Holdings Limited (ASX:BGD, FRA:BGD3, OTCQB:BGDFF) (Barton or Company) is pleased to announce an updated MRE for its South Australian Challenger Gold Project (Challenger).

This follows detailed remodelling of gold mineralisation on or near existing development drives within the historical Challenger underground mine (below the 900mRL level).

This mineralisation was temporarily removed from Barton's recent 30 June 2025 Challenger MRE update, pending final remodelling and re-estimation.

HIGHLIGHTS

- Challenger JORC (2012) Mineral Resources Estimate (MRE) grows to 313koz Au (10.6Mt @ 0.92 g/t), incl. 194koz Au (1.87Mt @ 3.23 g/t) in existing open pit and underground mines:
 - o Challenger Main Open Pit: 70,000oz Au (0.65Mt @ 3.36 g/t Au);
 - o Challenger West Open pit: 11,600oz Au (0.03Mt @ 10.7 g/t Au);
 - o Challenger Underground (above 215mRL): 89,400oz Au (0.98Mt @ 2.84 g/t Au); and
 - o Challenger Deeps (below 90mRL): 23,000oz Au (0.21Mt @ 3.50 g/t Au).
- Almost all MRE mineralisation located in, on, or adjacent to, existing serviceable open pit and underground development → opportunities for low-cost access and production
- Preliminary estimate for full reinstatement of 600ktpa Central Gawler Mill only A\$26m (± 30%)
- Targeting lower-cost, de-risked two phase transition to operations, with initial high-grade tailings reprocessing (as Phase 1), followed by restart of fresh rock operations (as Phase 2)
- Technical programs moving directly to definitive Feasibility, targeting operations by end of 2026; conversations underway with financiers for low-dilution credit financing options.

Barton MD Alexander Scanlon Commented on the JORC Resources update,

“With gold Resources of over 300,000oz now confirmed adjacent to the Central Gawler Mill, the pieces are now in place for the startup of an initial multi-year ‘Stage 1’ operation.

“This represents a significant opportunity for Barton to join a select few of its peers by transitioning to operations at a period of record high gold prices.

“Our fully permitted Central Gawler Mill also offers considerable leverage in successfully delivering this outcome, with a potentially shorter, lower-cost, and lower-risk pathway to operations and BGD’s re-rating to ‘producer’ status.

“A successful outcome could then generate revenues and cash flow to fund our planned regional growth.

“We are now moving directly to definitive Feasibility studies targeting a two phase, de-risked development and the start of initial ‘Stage 1’ operations by the end of 2026.

Barton has a very exciting 18 months ahead as we navigate this next stage of our corporate evolution.”
