Impact Minerals Reports Oustanding Results

Impact Minerals Limited (ASX: IPT)

Three large and significant soil geochemistry anomalies for a range of battery metals and precious metals have been identified at Impact's 100% owned Beau Project, part of the greater Arkun–Beau–Jumbo project area in the emerging mineral province of southwest Western Australia.

IMPACT MINERALS REPORT OUTSTANDING Ni–Cu–PGM, GOLD and LITHIUM–CAESIUM–TANTALUM SOIL GEOCHEMISTRY RESULTS AT THE BEAU PROJECT, WA

Three large and significant soil geochemistry anomalies for a range of battery metals and precious metals have been identified at Impact Minerals Limited’s (ASX:IPT) 100% owned Beau Project, part of the greater Arkun–Beau–Jumbo project area in the emerging mineral province of southwest Western Australia.

• Four large and significant soil geochemistry anomalies identified, including:

- a large copper–nickel–PGM–silver–cobalt anomaly up to 2.5 km by 1 km in size and associated with previously unrecognised layered mafic gabbros
- a gold–palladium anomaly about 500 metres in diameter
- two lithium–caesium–tantalum anomalies each about 1 km in dimension that may be part of a large zoned intrusive pegmatite system

• Field checking and relevant follow–up sampling of all areas will commence by the end of August to identify reconnaissance drill targets as quickly as practicable
• A reconnaissance drill programme will be organised as soon as practicable and subject to access and the harvest period
• There has been no previous exploration at Beau prior to Impact’s work

Three large and significant soil geochemistry anomalies for a range of battery metals and precious metals have been identified at Impact Minerals Limited’s (ASX:IPT) 100% owned Beau Project, part of the greater Arkun–Beau–Jumbo project area in the emerging mineral province of southwest Western Australia.

Impact Minerals' Managing Director Dr Mike Jones said;

"These are the first detailed soil geochemistry results we have had from the hitherto poorly explored greater Arkun project area and confirm our belief that the area is very prospective for a range of battery, strategic and precious metals.

"In addition, it is a validation of our targeting methodology which we have applied across our extensive project portfolio in Western Australia and put together over the past 18 months.

"A large nickel-copper-PGM anomaly overlies previously unidentified layered mafic intrusive rocks; these are known hosts to significant massive sulphide deposits around the globe.

"In addition, we have identified a gold anomaly that is associated with rare earth responses and which may be part of a large intrusion-related system.

"To cap it all off, we also have identified two areas with significant responses for a range of metals associated with a zoned lithium pegmatite system.

"Follow-up field checking will commence later this month in order to define targets for first-pass drilling as soon as

practicable and to identify the bedrock which is mostly obscured by laterite.

“We also look forward to getting the results from a further 600 soil samples that are still to come from the northern part of the Arkun project”.

City Investors Circle is based in the financial district in the City of London

We present interesting and exciting junior mining companies listed on the ASX and TSX stock exchanges to a group of city professionals, and private investors, all of whom are active investors with a mandate to invest in junior mining companies.

Our audience is selected and invited individually to ensure interest and relevance for the presenting company.

Meetings are non deal, small group, highly focused and engaged, with a lively Q and A to follow the main presentation.

We create awareness, and maintain interest in presenting companies by disseminating their future news to our entire investor group via email, social media, and our Monthly Review newsletter.

If you wish to present to our select group of active mining investors, please email andrew@city-investors-circle.com
