Cabral Gold Reviews 2021 Achievements and Outlines Plans for 2022 at Cuiú Cuiú Gold District, Brazil

6th January 2022

Vancouver, British Columbia–(Newsfile Corp. – January 6, 2022) –**Cabral Gold Inc. (TSXV: CBR) (OTC: CBGZF) ("Cabral" or the"Company"**) is pleased to provide a summary of successes achieved during 2021 at the Cuiú Cuiú golddistrict in northern Brazil, and outline its plans for 2022.

During 2021, Cabral's ongoing drill program was primarily focused on defining the high-grade zones within the MG and Central gold deposits, but the Company also identified two new near surface gold-in-oxide blankets at MG and PDM, as well as a new high-grade mineralized zone in hard rock at PDM. The Company continued to drill test and expand other new target areas, such as Machichie, Machichie SW, Morro da Lua, and Indio. There are still some 39 other gold targets to test on the 36,000 ha Cuiú Cuiú property. Concurrent with the drill program Cabral continued its regional grassroots reconnaissance exploration in new areas of the district including stream- and soil-geochemical sampling and prospecting.

Based on positive initial results realized during early 2021, Cabral accelerated its drilling campaign. The Company started 2021 with two RC rigs and added a diamond rig in February and two more diamond rigs in July following the successful closing of a financing in July. A total of 25,359m of drilling was completed during the year, including 16,027m of RC drilling and 9,332m of diamond drilling. Assay results from 21 diamond-drill holes and 12 RC holes completed at MG, PDM, and Central were still pending at year end and will be released in the coming weeks.

Cabral is looking forward to continuing its aggressive exploration program in 2022 and is planning an expanded drill program at PDM following encouraging drill results in December which included 22.4m @ 4.8 g/t gold from the granitic rocks below the recently identified gold-in-oxide blanket. In addition, diamond drilling at the Central and MG gold deposits will continue with the objective of defining higher grade zones within both deposits, while testing for additional zones of mineralization. RC drilling will also continue testing the overburden above the Central gold deposit with the objective of identifying a third gold-in-oxide blanket.

Elsewhere additional drilling and trenching is planned at Machichie, and several regional targets including Tracaja, Indio, Dona Moca and the new Escondido target.

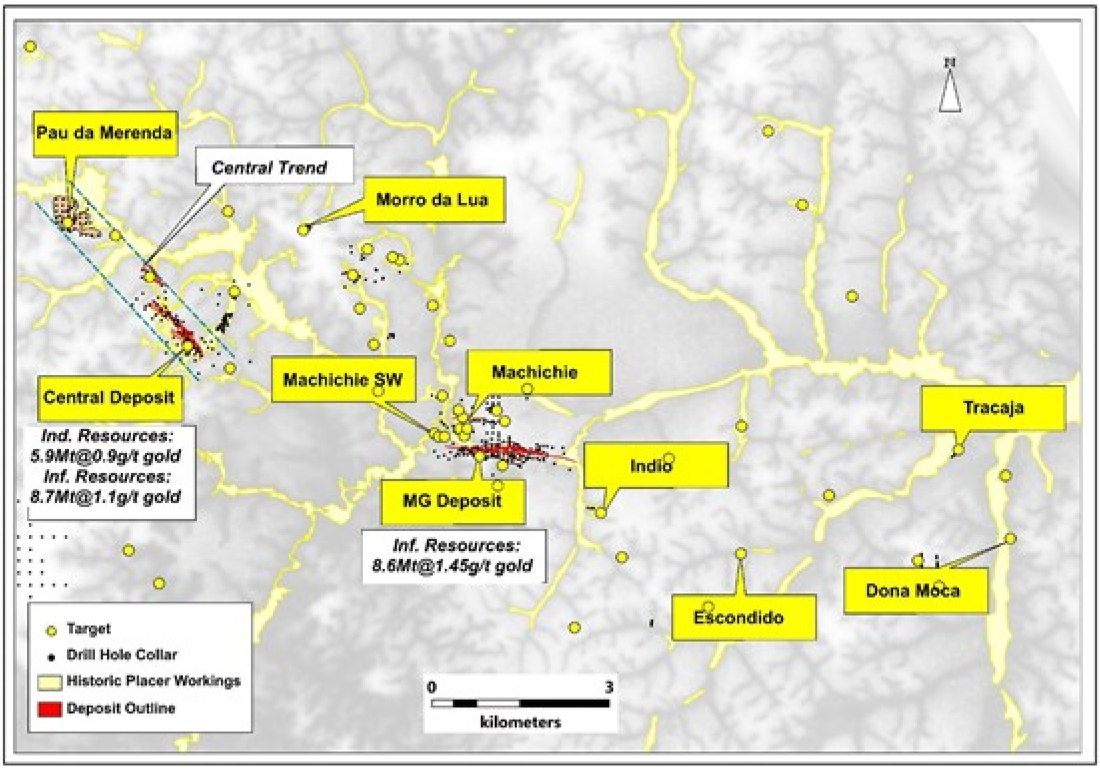

Figure 1: Topographic map showing the location of the MG and Central gold deposits (in red) and the outline of the recently discovered gold-in-oxide blankets at PDM and MG (in beige) as well as other key targets at Cuiú Cuiú. The outline of the historic placer gold workings are shown in pale yellow. MG and Central are the two deposits comprising the current project resource

City Investors Circle is based in the financial district in the City of London

We present interesting and exciting junior mining companies listed on the ASX and TSX stock exchanges to a group of city professionals, and private investors, all of whom are active investors with a mandate to invest in junior mining companies.

Our audience is selected and invited individually to ensure interest and relevance for the presenting company.

Meetings are non deal, small group, highly focused and engaged, with a lively Q and A to follow the main presentation.

We create awareness, and maintain interest in presenting companies by disseminating their future news to our entire investor group via email, social media, and our Monthly Review newsletter.

If you wish to present to our select group of active mining investors, please email andrew@city-investors-circle.com

=======

This website is not sponsored, we are truly independent, and will always remain so.

Companies featured here have either presented to the Circle in London, or have been selected because they are considered to have interesting projects, in good jurisdictions, run by an experienced management team.

Lefroy Exploration Drill crew, Western Australia

City Investors Circle Annual Review 2021 published

The Review covers the best performing stocks that have presented to us in London, the biggest risers from the watchlist during 2021, as well as the commodities that rose the most over the last year.

The Review looks at the performance of a large group of companies that have presented live to us in London since 2014, and the results vindicate the value of attending company presentations.

We then cover the best performing companies on the watchlist in 2021, where there have been some significant gains, and few losses, despite a poor market.

Four of the companies on the watchlist were bought out in 2021, two of the deals we liked as they look to make sense, the other two, and in particular Roxgold's sale to Fortuna Silver look like a poor deal in my opinion.

Finally we look at the commodities' performance over the last year, where most gained and very few went down.

Cabral Gold Drills 22.4m @ 4.8 gpt Gold

Cabral Gold Inc. (TSX.V: CBR)

Provided assay results from four diamond-drill holes completed at the PDM target beneath the recently identified gold-in-oxide blanket, within the Cuiú Cuiú gold district in northern Brazil.

Diamond-drill hole DDH238 drilled at the PDM target beneath the recently identified gold-in-oxide blanket returned **22.4m @ 4.8 g/t gold** from 114.1m.

Cabral Gold – MG Deposit, Para state, Brazil

Cabral Gold Drills 22.4m @ 4.8 g/t gold including 1.35m @ 62.0 g/t gold Beneath Gold-in-Oxide Blanket at PDM Target, Cuiú Cuiú Gold District, Brazil

15th December 2021

Vancouver, British Columbia–(Newsfile Corp. – December 15, 2021) –**Cabral Gold Inc.** **(TSXV: CBR)** **(OTC Pink: CBGZF)** **(“Cabral” or the**“**Company**“) is pleased to provide assay results from four diamond-drill holes completed at the PDM target beneath the recently identified gold-in-oxide blanket, within the Cuiú Cuiú golddistrict in northern Brazil.

Highlights are as follows:

- Diamond-drill hole DDH238 drilled at the PDM target beneath the recently identified gold-in-oxide blanket returned**22.4m @ 4.8 g/t gold**from 114.1m depthincluding**1.35m @ 62.0 g/t gold**and**1.3m @ 9.5 g/t gold**
- The new mineralized zone extends at least 200m along

strike, trends NW-SE and dips steeply to the SW. It is open in every direction and is 2.5km NW and along strike from the NW-SE trending Central gold deposit

- The current program of diamond drilling has confirmed that the PDM gold-in-oxide blanket is underlain by a significant zone of high-grade gold mineralization in the underlying granitic basement rocks.

Cabral Gold management comments

“When we first identified the second gold-in-oxide blanket at PDM in August of this year, we predicted that there would be a zone of primary gold mineralization in the granitic basement rocks underlying the blanket, similar to the situation that we have at the nearby MG gold deposit.

“This stunning high-grade intercept from DDH238 at PDM proves our original hypothesis. We now believe that the PDM gold-in-oxide blanket is underlain by a NW-trending zone of gold mineralization in the underlying granitic rocks which dips steeply to the SW and thus far extends for approximately 200m along strike.

“The mineralized zone at PDM remains open along strike and down dip and represents a significant new discovery within the Cuiú Cuiú gold district.

“It will require an aggressive program of follow up drilling. I would like to take this opportunity to congratulate our exploration team in Brazil on a brilliant new discovery.”

Alan Carter, Cabral Gold President and CEO

.

PDM Target Diamond Drill Results

The PDM (Pau de Merenda) target is located 2.5km NW of the Central gold deposit at Cuiú Cuiú (Figure 1). Following the identification of an extensive gold-in-oxide blanket at PDM earlier this year (see press release dated August 10, 2021), a program of diamond drilling was initiated in order to test for the presence of an underlying zone of primary gold mineralization in the granitic basement rocks.

Drilling earlier this year confirmed the presence of a gold-in-oxide blanket overlying the MG gold deposit (see press releases dated April 15, 2021 and May 19, 2021) which is located 7km to the SE of PDM (Figure 1). The blanket at MG occurs above basement granitic rocks that were partially eroded over millions of years to form an unconsolidated and mineralized cap, or blanket.

Cabral Gold Drills 70.8m @ 1.0 g/t Gold at MG Gold

Cabral Gold Inc. (TSX.V: CBR)

Provided assay results from five diamond-drill holes completed at the MG gold-in-oxide blanket, and also results from reconnaissance drilling at the Alonso target within the Cuiú Cuiú gold district in northern Brazil.

Diamond-drill hole MET04 drilled at the gold-in-oxide blanket at MG returned **70.8m @ 1.0 g/t gold** from surface, including **17.0m @ 3.3 g/t gold** from 41.0m depth.

Location	**Para State, Brazil**

Cabral Gold Drills 70.8m @ 1.0 g/t Gold at MG Gold-in-Oxide Blanket and Identifies New Gold Anomaly North of

Alonso at Cuiú Cuiú Gold District, Brazil

Vancouver, British Columbia–(Newsfile Corp. – December 9, 2021) – **Cabral Gold Inc. (TSXV: CBR) (OTC: CBGZF)** (**"Cabral" or the** "**Company**") is pleased to provide assay results from five diamond-drill holes completed at the MG gold-in-oxide blanket, and also results from reconnaissance drilling at the Alonso target within the Cuiú Cuiú gold district in northern Brazil.

Highlights are as follows:

- Reconnaissance stream-sediment sampling has identified a new gold anomaly in streams 750m NE of the Alonso target and 3.4km ESE of the MG gold deposit
- The new anomaly has been named Escondido and is very similar to the geochemical and magnetic anomaly which define the MG gold deposit. Five recently completed reconnaissance drill holes at the Alonso target did not intercept any significant gold values of interest, suggesting that the primary source of the boulders is farther afield than previously anticipated, possibly the Escondido area
- Diamond-drill hole MET04 drilled for metallurgical testing at the gold-in-oxide blanket at MG returned**70.8m@ 1.0 g/t gold**from surface, including**17.0m @ 3.3 g/t gold**from 41.0m depth. Similarly, diamond-drill hole MET05 returned**43.6m @ 1.4g/t gold**from surface
- Diamond-drill hole MET03 also completed at the gold-in-oxide blanket at MG returned**54.0m @ 0.7 g/t gold**from

surface, including **21.8m @ 1.4 g/t gold,** and diamond-drill hole MET02 returned **13m @ 0.9 g/t gold** from surface and **21.7m @ 0.8 g/t gold** from 32.2m depth

Cabral Gold management comments

"We are extremely pleased with the assay results received on the five metallurgical test diamond drill holes recently completed at the MG gold-in-oxide blanket and look forward to receiving the results of the metallurgical test work during the first quarter of 2022, which will be key to understanding the economic viability of the blanket mineralization.

"The diamond drill results from the Alonso target suggest that the high-grade boulders that we see on surface at Alonso are not derived from the immediate vicinity and may have been eroded from a source that is located further away than we previously anticipated.

"The identification of a major gold anomaly in streams which is coincident with a major E-W trending magnetic anomaly, 750m north-east of Alonso, opens up the possibility of a more distal source for the high-grade boulders.

"The fact that our exploration team continues to identify highly prospective targets in parallel with the drilling efforts is very encouraging and demonstrates the enormous potential of the Cuiú Cuiú gold district.

"Cuiú Cuiú is a district which contains 43 mainly high-grade targets outside the two known gold deposits with resources. Cabral currently has four rigs turning on three separate targets."

Alan Carter, Cabral Gold President and CEO

Alonso Area Diamond Drilling and Reconnaissance Exploration

The Alonso target is located approximately 3.4km SE of the MG gold deposit and is characterized by numerous high-grade mineralized boulders that were found on surface.

These boulders previously returned very high gold values of **11.3 to 200.3 g/t gold** (see press release dated February 11, 2020).

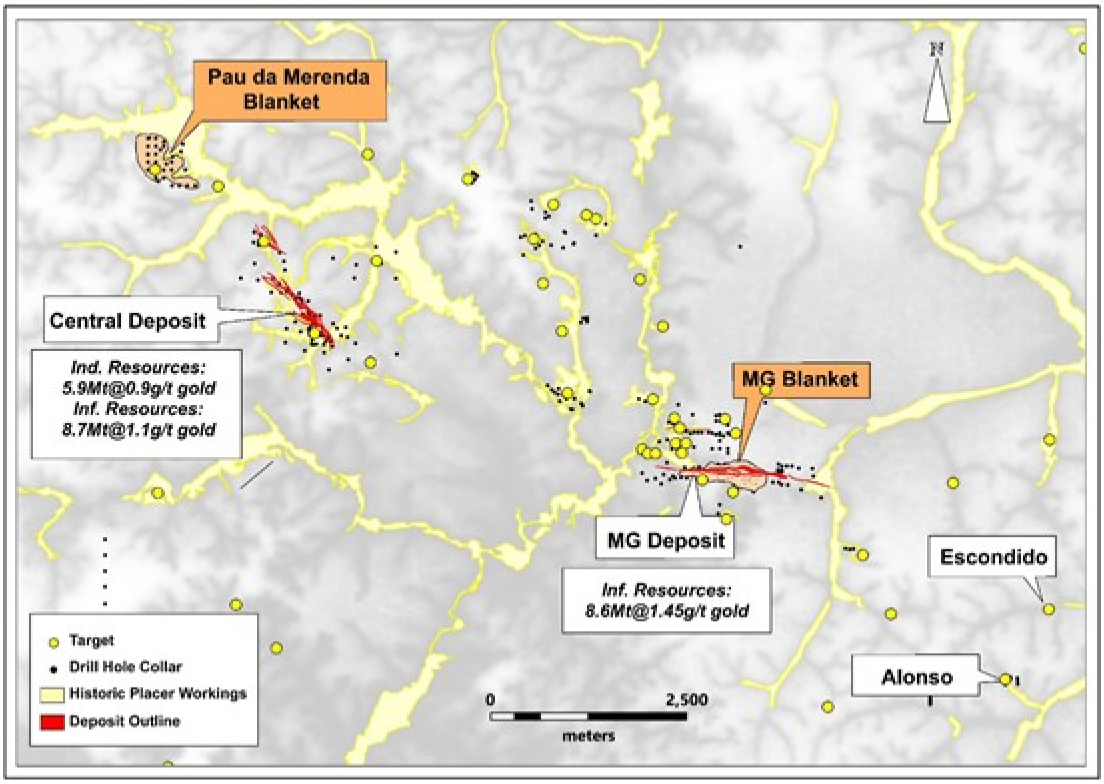

Figure 1: Map showing the location of the Alonso target and the major new Escondido gold anomaly in streams north-east of Alonso, as well as the MG and Central gold deposits and the

overlying MG gold-in-oxide target, as well as the Pau de Merenda (PDM) gold-in-oxide blanket and other key targets within this part of the Cuiú Cuiú district

Cabral Gold Expands the Gold-in-Oxide Blanket at MG

Cabral Gold (TSX.V: CBR)

Results have been received from 17 additional RC drill holes which were designed to test the extent and continuity of the MG gold-in-oxide blanket which overlies the primary MG gold deposit. Based on these results, the surface area of the blanket has been expanded by at least 20%, to a total of 24 hectares.

Cabral Gold – MG Deposit, Para State, Brazil

Cabral Gold Continues to Expand the Gold-in-Oxide Blanket

at the MG Target, Cuiú Cuiú

District, Brazil

Vancouver, British Columbia – October 14, 2021 – Cabral Gold Inc. ("Cabral" or the "Company") (TSXV: CBR) (OTC: CBGZF) is pleased to provide assay results from an additional 17 RC holes at the MG gold-in-oxide blanket at the Cuiú Cuiú gold district in northern Brazil.

Highlights are as follows:

- Results have been received from 17 additional RC drill holes which were designed to test the extent and continuity of the MG gold-in-oxide blanket which overlies the primary MG gold deposit. Based on these results, the surface area of the blanket has been expanded by at least 20%, to a total of 24 hectares

- Significant results on several sections through the blanket include 66m @ 0.7 g/t gold, 24m @ 0.8 g/t gold, 23m @ 0.6 g/t gold, and 12m @ 0.8 g/t gold. The most easterly hole drilled to date (RC160) returned 23m @ 0.6 g/t gold and the gold-in-oxide blanket mineralization remains open in almost every direction

- RC161 also returned 17m @ 1.0 g/t gold including 1m @ 7.5 g/t gold in the underlying primary MG gold deposit. As a result of these encouraging results the drill program at the MG gold-in-oxide blanket has been expanded from the initial 74-hole program to a total of 86 planned holes of which eight will be diamond drill holes

Cabral Gold management comments

"Our RC drilling program at the MG gold-in-oxide blanket continues to surprise us by delivering results which suggest the gold-in-oxide blanket in unconsolidated material above the MG gold deposit at Cuiú Cuiú, is larger than we previously anticipated.
"The recent drilling has expanded the surface footprint of the gold mineralization in this blanket by 20% to 24 hectares and it is still open in almost every direction.
"These results continue to suggest the presence of a significant deposit in unconsolidated material which has resulted from the partial erosion of the underlying hard-rock MG gold deposit.
"With five drill rigs currently turning on site and an aggressive 30,000 meter drill program planned at Cuiú Cuiú for the coming months, we look forward to additional drill results from both the MG and Central gold deposits and a number of the other 43 mainly high-grade targets that occur outside the two known gold deposits".

Alan Carter, Cabral Gold President and CEO
