Cabral Gold Drills a Significant New Mineralized Zone

Cabral Gold (TSX.V: CBR)

Discovered a new mineralised zone and expanded the PDM oxide blanket at Cuiú Cuiú.

Hole DDH387 drilled at the Mutum target returned 20.7m @ 1.6 g/t gold from 131.4m depth including 2.5m @ 5.7 g/t gold from 146.0m depth.

Cabral Gold Drills Significant New Mineralized Zone between the Central and PDM Gold Deposits and Expands the PDM Gold-in-Oxide Blanket, Cuiú Cuiú Gold District, Brazil

Vancouver, British Columbia – June 23, 2026 – **Cabral Gold Inc. ("Cabral" or the "Company") (TSXV: CBR)** (OTCQX: CBGZF) is pleased to announce results from reconnaissance core drilling recently conducted at the Mutum target within the Cuiú Cuiú Gold District, Brazil.

Highlights

- DDH387 drilled at the Mutum target and located 450m SE of the PDM gold deposit and 1.5km NW of the Central gold deposit, returned 20.7m @ 1.6 g/t gold from 131.4m depth including 2.5m @ 5.7 g/t gold from 146.0m depth

- The results from DDH387 suggest the presence of a previously unrecognised mineralized zone at Cuiú Cuiú between the Central and PDM gold deposits which are located 2km apart

- Several holes returned gold in near surface blanket soils and sediments, notably DDH387 which returned 11.5m @ 0.42 g/t gold from surface, DDH381 which returned 7.5m @ 0.40 g/t gold and DDH383 which returned 4.3m @ 0.58 g/t gold

- The presence of low-grade gold values in near surface oxide material in several holes suggests that the PDM gold-in-oxide blanket could be significantly larger than currently envisaged. Additional drilling is planned

Alan Carter, Cabral's President and CEO commented,

"The Mutum target is located within the highly prospective NW trending Central – PDM corridor, a 2km-long trend which is characterised by a strong +100ppb gold-in-soil anomaly and a

pronounced magnetic low likely reflecting extensive hydrothermal alteration in the underlying intrusive host rocks.

“The reconnaissance drill results at Mutum are significant for two reasons. Firstly, they indicate the presence of a new mineralized zone in primary intrusive rocks between the PDM and Central gold deposits which may be a possible extension to those deposits, and secondly, the gold-in-oxide blanket at PDM appears to be significantly larger than previously thought.”

City Investors Circle is based in the financial district in the City of London

We present interesting and exciting junior mining companies listed on the ASX and TSX stock exchanges to a group of city professionals, and private investors, all of whom are active investors with a mandate to invest in junior mining companies.

Our audience is selected and invited individually to ensure interest and relevance for the presenting company.

Meetings are non deal, small group, highly focused and engaged, with a lively Q and A to follow the main presentation.

If you wish to present to our select group of active mining investors, please email andrew@city-investors-circle.com

=======

This website is not sponsored, we are truly independent, and will always remain so.

Companies featured here have either presented to the Circle in London, or have been selected because they are considered to have interesting projects, in good jurisdictions, run by an experienced management team.

All information used in the preparation of this communication has been compiled from publicly available sources that we believe to be accurate and reliable, however, we cannot, and do not, guarantee the accuracy or completeness of this.

Cabral Gold Drills 30m @ 2.6

g/t Oxidized gold

Cabral Gold (TSX.V: CBR)

Announced assay results from an additional 12 RC holes testing near-surface oxide material at the Machichie Main Zone, Cuiú Cuiú gold district in northern Brazil.

These holes are part of a drill program designed to better define and quantify the saprolite and blanket gold-in-oxide mineralization at the Machichie target, and could have an impact on the current plans for trial-mining oxide material in that area.

Cabral Gold Drills 30m @ 2.6 g/t gold in Oxidized Material

from Surface at Machichie

Vancouver, British Columbia – February 6, 2024 – Cabral Gold Inc. ("Cabral" or the "Company") (TSXV: CBR) (OTC: CBGZF) is pleased to announce assay results from an additional 12 RC holes testing near-surface oxide material at the Machichie Main Zone, Cuiú Cuiú gold district in northern Brazil.

These holes are part of a drill program designed to better define and quantify the saprolite and blanket gold-in-oxide mineralization at the Machichie target, which is located just 500m northwest of the MG gold deposit and could have an impact on the current plans for trial-mining oxide material in that area.

Highlights

- RC409 returned 30m @ 2.6 g/t gold from surface in mineralized basement saprolite material including 12m @ 5.6 g/t gold from 11m depth
- _RC418 returned 9m @ 4.3 g/t gold in mineralized fresh rock from 41m depth including 2m @ 18.6 g/t gold at the start of the 9m interval
- RC414 returned 13m @ 1.6 g/t gold from surface in mineralized saprolite, including 6m @ 2.8 g/t gold from 4m depth
- Other significant new mineralized saprolite drill intercepts include 7m @ 2.7 g/t gold from 7m depth in hole RC411, 15m @ 0.6 g/t gold from surface in hole RC412 and 18m @ 0.6 g/t gold from surface in hole RC413

Alan Carter, Cabral's President and CEO commented,

"These additional RC drill results from Machichie confirm the presence of a significant zone of near surface gold-in-oxide mineralization at Machichie which appears to overlay another primary gold deposit.

"Further drilling will be required to fully define the limits

to both the weathered gold-in-oxide mineralized material and the underlying hard-rock mineralized zone which was the focus of previous drilling.

"Both of these zones remain open along strike and to depth. The proximity of Machichie to the MG gold deposit has significant positive implications for the overall near surface gold-in-oxide resources which are amenable to heap leaching at Cuiú Cuiú, as well as the underlying resource base in fresh intrusive basement rocks."
