

Maple Gold Starts Phase 3 Drilling at Eagle

Maple Gold Mines (TSX.V: MGM)

Announced that a third drill rig has been secured to commence a 5,000 metre Phase III drill program at its 100%-controlled Eagle Mine Property.

The third rig is expected to arrive at site by mid-October, keeping the Company on track to complete approximately 30,000 m across its district-scale property in Québec by year-end.

Maple Gold Secures Third Drill Rig to Commence Phase III Drilling at Eagle and Remains on Track to Complete 30,000 Metres Across Its Quebec Project Portfolio by Year-End

Vancouver, British Columbia—(Newsfile Corp. — October 7, 2022) — **Maple Gold Mines Ltd. (TSXV: MGM) (OTCQB: MGMLF) (FSE: M3G)** (“**Maple Gold**” or the “**Company**”) is pleased to announce that a third drill rig has been secured to commence a 5,000 metre (“m”) Phase III drill program at its 100%-controlled Eagle Mine Property (“Eagle”).

The third rig is expected to arrive at site by mid-October, keeping the Company on track to complete approximately 30,000 m across its district-scale 400 km² property package in Québec, Canada by year-end. Further to the Company’s news release on August 3, 2022, two (2) rigs are now turning on deep drill holes beneath and adjacent to the historical underground mine workings in the Telbel mine area (“Telbel”) at the Joutel Project (“Joutel”), which is held by a 50/50 joint venture (“JV”) between Maple Gold and Agnico Eagle Mines Limited.

In addition, the Company expects to secure a fourth drill rig in November to commence deep drilling at the JV’s Douay Project (“Douay”).

The Company is also pleased to announce that it has resolved the electrical issues at site that affected its core saws, effectively removing its core cutting backlog and enabling several large batches of samples from previously completed drilling to be sent to the assay labs.

Matthew Horner, President and CEO of Maple Gold stated;

“We are excited to commence Phase III drilling at Eagle that will follow up on the best results of the first two drilling phases and test additional targets while we are also ramping up the pace of our supplemental C\$4.8M deep drilling program at Douay and Joutel.

“With normal site operations now restored, our backlog of core splitting and sample shipments has been effectively eliminated and we anticipate additional assay results throughout Q4 2022.

“The Company expects to be continuously drilling more aggressive step-out and deep drill holes at Douay, Joutel and Eagle with at least three rigs from mid-October through the end of Q1 2023.”

Deep Drilling Progress

Deep drilling at Telbel is progressing steadily with two drill rigs actively testing the down-plunge continuity of gold mineralization in this area.

Drill hole TB-22-001 (drilled from south to north) is approaching 1,500 m downhole and has encountered a broad near-surface zone of felsic-pyroclastic-hosted pyrite mineralization enroute to a planned total downhole depth of 2,000 m.

Initial samples from TB-22-001 have already been shipped to the assay lab. Drill hole TB-22-002 (drilled from north to south) is collared 2.4 km to the east of TB-22-001 and is currently nearing 900 m downhole. In addition, the Company anticipates commencing a ~10,000 m deep drilling program at Douay with a fourth drill rig in November. The JV has approved a combined ~16,000 m of deep drilling at Douay and Telbel under the previously announced C\$4.8M increase to its Year Two exploration budget (see news from May 18, 2022).

New Exploration Drill hole Completed at Douay

The Company has also recently completed a new 534 m exploration drill hole at Douay (D0-22-330) collared approximately four (4) km south of the 531 Zone along the regional Casa Berardi South Fault, locally known as the Joutel Deformation Zone (“JDZ”) (see Figure 1).

The JDZ has seen very limited drilling to-date in this area, with only a single historical drill hole over a nine (9) km segment of this structural corridor.

The Company’s recently completed airborne magnetic and electromagnetic (“Mag-EM”) survey identified several conductive targets along trend to the southwest on the Joutel property (see news from July 19, 2022) providing further support for the JDZ as a favourable structural corridor for hosting gold mineralization.

Initial drill core observations from D0-22-330 highlight the potential for Casa-Berardi style gold mineralization associated with brecciated and pyritic quartz veins in graphitic fault zones.

6.7 METRES WITHIN 1.54 G/T
GOLD OVER 32.2 METRES AT THE
531 ZONE, AND MAKES EQUITY**

INCENTIVE PLAN GRANTS

Vancouver, British Columbia—(Newsfile Corp. – April 5, 2022) – **Maple Gold Mines Ltd. (TSXV: MGM) (OTCQB: MGMLF) (FSE: M3G)** (“**Maple Gold**” or the “**Company**”) is pleased to report final assay results from the Fall 2021 drill program at the Company’s Douay Gold Project (“Douay” or the “Project”) in Quebec, Canada, which is held by a 50/50 joint venture (the “JV”) between the Company and Agnico Eagle Mines Limited.

The JV completed a total of seven (7) holes and roughly 3,420 metres (“m”) under the Fall 2021 drill program, with every hole intersecting multiple intervals of >1 gram per tonne gold (“g/t Au”).

Highlights:

- Drill hole D0-21-316 at the 531 Zone intersected **1.54 g/t Au over 32.2 m** (from 430.0 m downhole), including **4.63 g/t Au over 6.7 m** within **2.13 g/t Au over 18.9 m**.
- D0-21-316 intercepts are located approximately 135 m down-plunge from the best intercept drilled to-date at the 531 Zone (D0-21-310; see news from September 9, 2021) and below the SLR 2022 NI43-101 Mineral Resource Estimate (“SLR 2022”) conceptual pit limits, indicating **down-plunge continuity of high-grade mineralized trends** and **resource expansion potential at depth** in the 531 Zone.
- Drill hole D0-21-317 intersected three discrete gold zones: **5.58 g/t Au over 3.0 m** (from 258.0 m downhole); **1.62 g/t Au over 16.0 m** (from 284.0 m downhole); and **3.42 g/t**

Au over 8.0 m(from 369.0 m downhole).

- D0-21-317 intercepts are located up-plunge relative to the D0-21-310 intercept and within a different stratigraphic horizon relative to D0-21-316 that is also favourable for gold mineralization, indicating **multiple stacked gold zones that remain open**.

Maple Gold management comments

“Our exploration team has delivered significant drill intercepts every year at the 531 Zone since 2019 when our targeting became supported by 3D modelling.

“These new intercepts further support our belief that there are multiple stacked gold zones with apparent cross-plunges that appear to be structurally controlled.

Demonstrated gold mineralization combined with a general lack of drilling has our team excited about the potential for the 531 Zone to deliver additional pit-constrained and underground resources as we continue with larger step-out and deeper drilling in 2022.”

Fred Speidel, VP Exploration of Maple Gold.

Fall 2021 Drill Program Interpretation and Summary of Results

The JV's Fall 2021 drill program included drilling in three separate areas (see Figure 1 for drill hole locations) outlined below with corresponding objectives:

1. **531 Zone (3 holes)**: Targeting further up-plunge and down-plunge along one of the two main interpreted mineralized trends (see Figure 2).
2. **Central Zone (2 holes)**: Located 450 m and 650 m east of the SLR 2022 Central Zone conceptual pit and designed to test the eastern continuity of sediment-hosted gold mineralization and support further drilling along a 700 m drilling gap (see Figure 1).
3. **Nika Zone / Porphyry Zone Gap Area (2 holes)**: The Porphyry Zone and Nika Zone are geologically similar and these two drill holes were drilled in the gap area between these two zones and their respective SLR 2022 conceptual pits.
