

Heliostar Metals Drills 69 Metres Grading 10.1 g/t Gold

[Heliostar Metals \(TSX.V: HSTR\)](#)

Announced additional results from the ongoing drill program at its 100% owned Ana Paula project in Guerrero, Mexico.

The program aims to convert inferred ounces to higher confidence classifications. The highpoint was 69.15 m grading 10.09 g/t from 93.0 m.

Heliostar Metals Drills 69 Metres Grading 10.1 g/t Gold in the High Grade Panel at Ana Paula

[View PDF](#)

Vancouver, Canada – April 23, 2026– [Heliostar Metals Ltd. \(TSX.V: HSTR, OTCQX: HSTXF, FRA: RGG1\)](#) (“Heliostar” or the “Company”) is pleased to announce additional results from the ongoing drill program at its 100% owned Ana Paula project in Guerrero, Mexico.

The program aims to convert inferred ounces to higher confidence classifications. It will also support the ongoing Feasibility Study and test the next exploration targets around the Ana Paula deposit.

HIGHLIGHTS:

- High Grade Panel
 - 69.15 m grading 10.09 g/t from 93.0 m
 - 43.8 m grading 13.9 g/t from 104.55 m, including 19.85 m grading 22.5 g/t
 - 28.95 m grading 11.2 g/t from 163.35 m
 - 30.65 m grading 11.3 g/t from 94.0 m, including 14.1 m grading 22.1 g/t
- Infill drilling continues to support the conversion of inferred material to higher confidence classifications
- Drilling to support the Feasibility Study and exploration of new mineralization is ongoing.

HelioStar CEO, Charles Funk, commented,

“Today’s results highlight the unique nature of the High Grade Panel in its ability to consistently return exceptionally high-grade gold over broad intercepts.

“The infill drill program continues to confirm this style of mineralization in portions of the deposit currently in the inferred category. We are on track to upgrade these zones to include them in the mine plan in the 2027 Feasibility Study

for Ana Paula.

“Our aim for this study is to expand the nine-year mine life and ~100,000 ounce per year high-margin production profile shown in our November 2025 Preliminary Economic Study.

“Bringing the Ana Paula mine online in 2028 will be a major step forward for achieving Heliostar’s goal of being a 500,000 ounce per year producer by the end of the decade.”

Drilling Program

Heliostar has completed 88 holes and 31,184 metres as part of its ongoing 2025-26 drill program at Ana Paula.

The drill program is infilling areas of inferred mineralization currently in the November 2025 Preliminary Economic Analysis mine plan. In parallel, it is also defining additional mineralization near planned underground mine infrastructure through step-out drilling and continuing to explore at depth for down-plunge extensions of mineralization in the Expansion Zone.

Today’s release covers five holes in the High Grade Panel. These holes were drilled as part of an ongoing drill program that continues to expand beyond the planned 28,000 metres of drilling driven by cost efficiency and exploration success.

There are fourteen holes from the High Grade Panel area awaiting assay results.

Comment

Wow, what a hole!

These drill results have really woken up the share price today, and with good reason.

The visible gold comment is exciting, and this news comes just as the company is ramping up production ready to switch on the Madsen Mill.

I topped up last week, and may do so again now.

West Red Lake Gold Intersects 48.97 g/t Au over 18.7m, 52.86 g/t Au over 4.5m and 25.49 g/t Au over 7.5m at South Austin – Madsen Mine

West Red Lake Gold Mines Ltd. (“West Red Lake Gold” or “WRLG” or the “Company”) (**TSX.V: WRLG**)(**OTCQB: WRLGF**) is pleased to report drill results from its 100% owned Madsen Mine located in the Red Lake Gold District of North western Ontario, Canada.

The drill results featured in this news release are focused on the high-grade **South Austin Zone**, which currently contains an Indicated mineral resource of 474,600 ounces (“oz”) grading 8.7 grams per tonne (“g/t”) gold (“Au”), with an additional Inferred resource of 31,800 oz grading 8.7 g/t Au.

Hole MM25D-12-4669-024 Intersected **18.7m @ 48.97 g/t Au**, from 5.3m to 24.0m, Including **2m @ 428.83 g/t Au**, from 20.5m to 22.5m, Also including **0.5m @ 16.06 g/t Au**, from 23.5m to 24.0m.

This high-grade intercept was complimented by **visible gold** hosted within highly deformed quartz-carbonate-diopside

veinlets.

Shane Williams, President & CEO stated

“As the underground definition drill program at Madsen advances at depth we continue to unlock significant value within the orebody.

“While the life-of-mine resource model accurately informs metal content throughout the deposit, it is tight-spaced drilling provides the resolution needed to properly quantify and realize further upside potential from the very high-grade pockets of gold mineralization ahead of stope design.

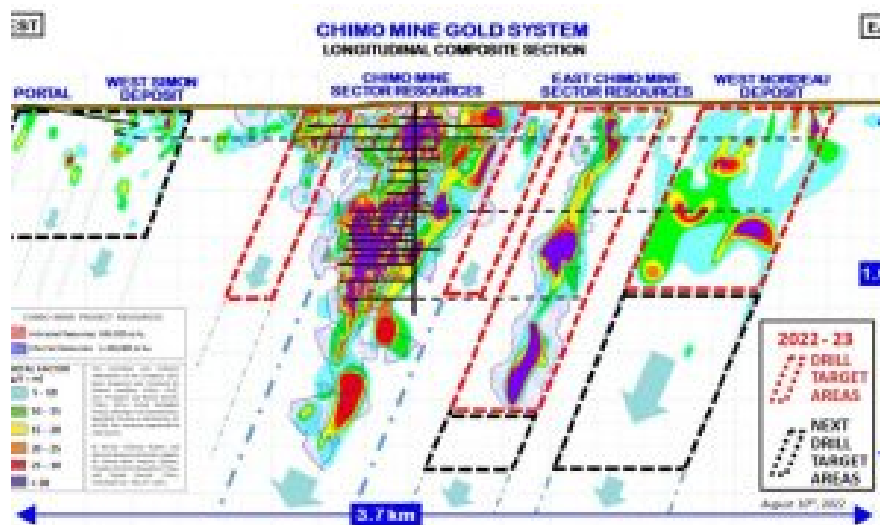

“The area highlighted in this update sits just beneath Stope 6 from our recent bulk sampling program and demonstrates the growth potential and increased continuity we are seeing in the deposit at depth.

“Having just reported excellent reconciliation results from our bulk sampling campaign, and with strong tailwinds from a rising gold market, the team’s confidence level is high as we move towards ramping up production at Madsen in the second half of 2025.”

Extension at Chimo

Cartier Resources (TSX.V: ECR)

Announced drill results below the West Nordeau deposit of the Chimo Mine Gold System from its ongoing drilling program on the Chimo Mine property and contiguous East Cadillac property.

DRILLING OF THE CHIMO MINE PROJECT CONFIRMS DEPTH EXTENSION OF WEST NORDEAU DEPOSIT

Val-d'Or, January 24th, 2023 – [Cartier Resources Inc. \(TSX.V: ECR\)](#) (“Cartier”) announces drill results below the West Nordeau deposit of the Chimo Mine Gold System ([FIGURE](#)) from its ongoing drilling program on the Chimo Mine property and contiguous East Cadillac property. Both properties, 100% owned by Cartier, are located 45 km east of the Val-d'Or mining camp.

The results available from the laboratory to date for the current drilling in the West Nordeau Sector are as follows:

- In the eastern part of the West Nordeau deposit (5NE2

Gold Zone), drilling intersected **4g/t Au over 6.5 m** included within broader sections grading **2.3 g/t Au over 23.0 m** and **2.1 g/t Au over 14.0 m** ([FIGURE](#)).

- In the western part of the West Nordeau deposit (5NE1 Gold Zone), drilling intersected **3g/t Au over 1.0 m** included within an interval grading **2.4 g/t Au over 5.6 m** ([FIGURE](#))

Philippe Cloutier, President and CEO of Cartier Resources commented;

“These results confirm the continuity of the mineralization below the West Nordeau deposit, with a view of extending exploration, to define additional resources to the same depth as in the Chimo Mine and East Chimo Mine sectors.

“The depth extension of the West Nordeau sector is important to add resources to the project.

The Chimo Mine Project now consists of 29 gold zones that are situated within 19 gold structures, drilled over a strike length of 3.7 km and locally up to a depth of 1.6 km where the recent mineral resource estimate, dated August 22, 2022*, reported:

Cabral Gold map

Cabral Gold Drills 6.4m @ 11.6 g/t gold including 1.1m @ 60.0 g/t gold at the Machichie Main Zone, Cuiú Cuiú Gold District

Vancouver, British Columbia – August 25, 2022 – **Cabral Gold Inc.** (“Cabral” or the “Company”) (TSX.V: CBR) (OTC: CBGZF) is pleased to provide assay results from five diamond-drill holes testing the Machichie Main zone discovery within the Cuiú Cuiú gold district.

Highlights are as follows:

- DDH303 returned the following intervals in primary intrusive basement rocks;
 - 6.4m @ 11.6 g/t gold from 123.6m including 1.1m @ 60.0 g/t gold
 - 3.8m @ 1.3 g/t gold from 81.9m
 - 1.9m @ 2.2 g/t gold, from 76.8m
- DDH279 returned the following intervals in primary intrusive basement rocks;

- 16m @ 2.9 g/t gold from 112.4m including 1.1m @ 29.7 g/t gold
 - 3.6m @ 3.4 g/t gold from 232.6m including 0.5m @ 14.9 g/t gold
 - 3.2m @ 2.7 g/t gold, from 77.2m
 - 3.0m @ 1.1 g/t gold, from 138.5m
-
- DDH302 returned 7.3m @ 5.0 g/t gold from 202.5m, including 1.8m @ 18.5 g/t gold. DDH300 returned 15.7m @ 1.6 g/t gold from 176.2m, including 0.8m @ 8.9 g/t gold, and 0.5m @ 12.5 g/t gold. DDH301 returned 12.2m @ 1.4 g/t gold from 215.6m
-
- These diamond-drill results from Machichie provide further evidence of the continuity of the Machichie Main zone at depth and indicate that this zone also contains a significant amount of high-grade gold mineralization

Alan Carter, Cabral's President and CEO commented;

"These drill results from the eastern part of the Machichie Main zone extend the mineralized zone to depth, it remains open down-dip on every section.

"All five follow-up diamond-drill holes at the Machichie Main zone cut broad zones of alteration including significant zones of high-grade mineralization. This is very similar to the style of mineralization found within the Central and MG gold deposits, as well as the new PDM discovery.

"Recent trenching to the west also suggests that the

Machichie Main zone extends for more than 900m along strike. To the west, it coalesces with a major north-east trending vein array.

“Combined, the Machichie W, Machichie SW, Machichie Main zone and Machichie NE target areas are now referred to as the Machichie Complex, which is likely to grow into a significant deposit.”

Karora Resources Drills 6 G/T Au Over 13 m

[Karora Resources \(TSX: KRR\)](#)

Announced continued exploration drilling success in targeting new gold mineralized shear zones in support of its growth plan strategy to deliver increased gold production by 2024.

Parallel shear zones to the Larkin Zone Mineral Resource, referred to as Mason and Cowcill, returned significant gold assays in the first two drill holes of a twenty-four-hole

program, the highlight was 6.0 g/t Au over 13 m.

Karora Resources	TSX: KRR
Stage	Production + Development + Exploration

Location	Kalgoorlie, Western Australia

**Karora Resources Drills 6.0
G/T Au Over 13.0 Metres In**

New Mason Zone And Provides Beta Hunt Development Update

TORONTO, Aug. 23, 2022/CNW/ – **Karora Resources Inc. (TSX: KRR)** (“Karora” or the “Corporation”) is pleased to announce continued exploration drilling success in targeting new gold mineralized shear zones in support of its growth plan strategy to deliver increased gold production in the targeted range of 185,000 to 205,000 ounces by 2024.

Interpreted parallel shear zones to the Larkin Zone Mineral Resource, referred to as Mason and Cowcill, returned significant gold assays in the first two drill holes of a twenty-four-hole program¹ as highlighted below.

- Mason: 6.0 g/t Au over 13.0 metres (BM1890-25AE)
- Cowcill: 2.4 g/t Au over 5.0 metres (BC1704-009AE)

N.B.

Interval lengths are downhole widths. Estimated true widths cannot be determined with available information.

Additionally, Karora is pleased to announce that construction activities to install the second decline at the Beta Hunt Mine are approximately 67% complete and the Corporation remains on track and on budget to complete construction in the first quarter of 2023 (as previously announced, ahead of the original complete target date of mid-year 2023).

Work on the vent raise is scheduled to begin at the end of the

month, with the expectation that the decline will be functioning in the second quarter of 2023.

Paul Andre Huet, Chairman & CEO, commented:

“I am encouraged by the first set of new gold drill results from the Mason and Cowcill shear zones.

“The results support our previous interpretation of these gold mineralized systems that run parallel to the Larkin Zone on both sides.

“I am particularly excited that the first two holes of our 24-hole program in this area both returned excellent results including 6.0 g/t over 13.0 metres.

“Today’s results are another great example of the Mineral Resource growth potential that exists at Beta Hunt, considering both Mason and Cowcill are outside the existing Mineral Resource.

“Our flagship Beta Hunt Mine is a literal beehive of mining, drilling, development, and expansion activities.

“In addition to our recent exploration and resource definition drilling results, completing the second decline

and vent raise installations at Beta Hunt are also critical tasks to position us to achieve our growth plan targets and I am very pleased that both are proceeding more rapidly than originally forecast.

“We have poured the vent pad and are scheduled to commence work on the vent raise beginning at the end of August. We currently expect that the second decline will be functioning by the end of the second quarter of 2023.

!Our team, along with our contractors, have been doing a great job executing on the plan.

“Overall, we expect to finish the project significantly ahead of our original schedule and under our original budget.”

Results for the first two holes drilled this year to test for the Mason and Cowcill Zones were received.

Mason and Cowcill are interpreted parallel gold mineralized shear zones to the Larkin Zone. The drill targets are supported by overlying nickel mineralization trends and historical gold intersections in the footwall to the nickel.

A section of the Cowcill Zone has also been mined historically for gold. The potential of the Mason Zone was realized late last year where drill hole EL-EA2-004AE intersected the widest ever mineralized interval drilled by Karora at Beta Hunt – 1.5 g/t Au over 90 metres including 50.9 g/t Au over 0.4 metres – approximately 250 metres west of the Larkin Zone (Karora news release dated November 15, 2021).

Significant results were received in both holes and are listed below:

- Mason: BM1890-25AE – 6.0 g/t Au over 13.0 metres
- Cowcill: BC1704-009AE – 2.4g/t Au over 5.0 metres

Los Cerros report 28m @ 3.34g/t Au at Tesorito

Los Cerros Limited (ASX: LCL)

Provided an update on recent infill drilling at Tesorito, an at-surface porphyry discovery that forms part of the 100% owned Quinchia Gold Project, in Risaralda – Colombia.

Quinchia is a cluster of porphyry and epithermal gold targets within a 3km radius, underpinned by established Mineral Resources of 2.6Moz @1g/t Au1

Los Cerros	ASX: LCL
Stage	Exploration
Metals	Gold, copper
Market cap	A\$20 m @ 3.1 c
Location	Risaralda, Colombia

Los Cerros report 28m @ 3.34g/t Au in Tesorito Infill Drilling at Tesorito

Los Cerros Limited (ASX: LCL) (Los Cerros or the Company) is

pleased to provide this update on recent infill drilling at Tesorito, an at-surface porphyry discovery that forms part of the 100% owned Quinchia Gold Project, in Risaralda – Colombia.

Quinchia is a cluster of porphyry and epithermal gold targets within a 3km radius (Figure 1), underpinned by established Mineral Resources of 2.6Moz @1g/t Au1

A short Tesorito infill drilling program comprising three drill holes was undertaken to increase drill hole density in the area that defines the high-grade potential starter pit within the 1.3Moz Tesorito Inferred Resource pit shell.

Lithology logs and gold assays for all three infill diamond drill holes were consistent with geology model expectations, again demonstrating wide, high grade gold mineralization starting from or near to surface.

Best results include:

- 255.9m @ 0.86g/t Au from surface including
 - o 121.2m @ 1.25g/t Au from 96m in TS-DH64
- 296.0m @ 0.82g/t Au from 4m including 98.1m @ 1.65g/t Au including
 - o 16.1m @ 3.11g/t Au from 189.8m in TS-DH65
- 196m @ 1.28g/t Au from surface including 89.3m @ 2.02g/t Au from 46.7m including
 - o 28.0m @ 3.34g/t Au from 106m in TS-DH66.
- Tesorito infill drilling delivers more high grade gold intercepts including:
 - 255.9m @ 0.86g/t Au from surface including 121.2m @ 1.25g/t Au from 96m in TS-DH64
 - 296.0m @ 0.82g/t Au from 4m including 98.1m @ 1.65g/t Au from 189.9m including
 - o 16.1m @ 3.11g/t Au from 189.9m in TS-DH65
 - 196m @ 1.28g/t Au from surface including 89.3m @ 2.02g/t Au from 46.7m including

- o 28.0m @ 3.34g/t Au from 106m in TS-DH66
- Infill program has been designed to better define potential high grade starter pit
- Strong cash position of over \$13 million at end of June ensures Los Cerros is well funded to continue advancing Miraflores and Tesorito deposits within the Quinchia Gold Project.

The higher grade material is associated with the porphyry core or breccia that surrounds it. All three drill holes crossed Marmato Fault lithologies and left the porphyry system at predicted depths.

Los Cerros management comments

“With a backdrop of difficult markets and increased risk aversion, the Company is focussed on advancing and de-risking mature prospects within the Quinchia Gold Project.”

“Recently announced results of Tesorito metallurgical test work demonstrated Tesorito ore is likely to be amenable to a conventional process flow and to enjoy typical porphyry style recovery performance characteristics, contains a mix of Inferred, Indicated and Measured Resources. Using Tesorito MRE of 1.3Moz @ 0.81 g/t Au.”

Los Cerros Managing Director, Jason Stirbinskis

“The Miraflores Reserve is included in the Miraflores Resource. Refer ASX announcement dated 14 March 2017 (Miraflores Resource) and 27 November 2017 (Miraflores Reserve) and 25 February 2020 (Dosquebradas

Resource) and 22 March 2022 (Tesorito Resource).

The Company confirms that it is not aware of any new information or data that materially affects the information included in the market announcements, and that all material assumptions and technical parameters underpinning the estimates continue to apply.

03 Mining Expands Mineralization Corridor At Camflo Extension, Intersecting 94 Metres at 1.1 g/t Au

TSXV:OIII – 03 Mining

TORONTO, June 30, 2022/CNW/ – **03 Mining Inc. (TSXV: OIII)** (OTCQX: OIIIF) (“03 Mining” or the “Corporation”) is pleased to announce it has received results and interpretation from its 6,338 metres drilling campaign on the Camflo Extension deposit, on the Marban Project in Val-d’Or, Quebec, Canada.

Drilling Highlights

- **1.1 g/t Au over 94.3 metres including 13.8 g/t Au over 1.1 metres** in hole 03MA-22-253-W1.
- **0.7 g/t Au over 116.5 metres and 26.8 g/t Au over 1.0 metre** in hole 03MA-21-253.
- **All holes and wedges returned large mineralized intervals within the Camflo Plug.**

The Camflo deposit was first discovered in 1962 by Camflo Mines, and was in production for 30 years from 1962 to 1992.

It produced a total of **1.89 million ounces of gold from 10.3 million tonnes of ore grading 5.7 g/t Au.**

From this amount, **0.24 million ounces of gold were extracted within the current 03 Mining Marban project claims** (Source:

QERPUB-M.E.R. Publication DV93-01 Rapports des Géologues Résidents sur l'Activité Minière Régionale, 1993).

Historically, gold production was mainly restricted to the Camflo Plug, a cigar shaped quartz-monzonitic intrusion that plunges 60° towards the north-east.

Although the Camflo plug at surface is outside 03 Mining's property claims, the extension of the plug and the mine below 800 vertical metres is within the Marban project, as it plunges toward the north-east.

Exploration efforts by **03 Mining aimed to test the depth extensions of the historic Camflo deposit, as well as test for additional high-grade zones.**

A total of 6,338 metres in 2 drill holes and 3 wedges were drilled on the Camflo Extension, with results summarized in Table 1. Assay results are pending for hole 03MA-22-254-W1.

03 Mining management comments

"The Camflo mine was the first mine from which Barrick Gold started its successful journey, and was stopped due to a challenging gold price environment but not due to a lack of ore.

"03 Mining owns 100% of the Camflo Extension deposit which we successfully tested and verified that it remains a rich mineralized area at depth.

"We believe more drilling in this area will unveil its full potential, however, it demands more financial resources which we are allocating to our current brownfield drilling at

Marban Engineering to maximize returns to our shareholders.”

03 Mining President and Chief Executive Officer, Mr. Jose
Vizquerra

BANYAN INTERSECTS 1.16 G/T

GOLD OVER 68.9 METRES AT POWERLINE DEPOSIT, AURMAC PROPERTY, YUKON

VANCOUVER, BC, March 30, 2022 – **Banyan Gold Corp.** (the “Company” or “Banyan”) (TSXV: BYN) (OTCQB: BYAGF) is pleased to announce analytical results from twenty-one (21) diamond drill holes completed during the Company’s 2021 exploration program at the Powerline deposit (the “Powerline Deposit”) located on the Company’s **AurMac Property**.

Assay highlights include:

- **48.6 metres (“m”) of 0.51 g/t Au** from 36.7 m in DDH AX-21-166
- **69.4 m of 0.63 g/t Au** from 125.9 m in DDH AX-21-170
- **47.2 m of 0.50 g/t Au** from surface (10.7 m) in AX-21-191
- **70.0 m of 0.65 g/t Au** from surface (10.7 m) in AX-21-194
- **96.7 m of 0.86 g/t Au** from 73.4 m in AX-21-197
- **81.9 m of 0.79 g/t Au** from 32.5 m in AX-21-199
- **68.9 m of 1.16 g/t Au** from surface (10.7 m) in AX-21-202

Banyan Gold management comments

“These latest assay results from our 2021 drill program continues to show the extensive nature of gold mineralization

around the Powerline Deposit on the AurMac Property, and importantly, continues to add to the interpreted geologic controls that will be used to update the AurMac Gold Resource estimations during the second quarter.”

“We are looking forward to the remaining sixteen holes from the 2021 program.”

Tara Christie, President & CEO of Banyan Gold
