

Yukon Government Assisting at Victoria Gold disaster Site

Victoria Gold (TSX: VGCX)

The Yukon government are stepping up their relief efforts at the site of the Victoria Gold Eagle Mine heap leach disaster.

Yukon Government Assisting at Victoria Gold disaster Site

Victoria Gold (TSX: VGCX) The Yukon government are stepping up their relief efforts at the site of the Victoria Gold Eagle Mine heap leach disaster.

The company are keeping mum currently, and it seems responsibility for the disaster is slowly being transferred to the Yukon government, after they stated the company were behind in their commitments to the clean up efforts.

A statement by the Yukon government can be read [here](#)

A Mining.com article can be read [here](#)

As I have previously stated, I think Victoria Gold is finished as a mining company.

I believe they are financially constrained due to the lenders declaring a debt default, and with no production producing cashflow and salaries and cleanup costs to pay, I think the end will not be too long in coming here.

City Investors Circle is based in the financial district in the City of London

We present interesting and exciting junior mining companies listed on the ASX and TSX stock exchanges to a group of city professionals, and private investors, all of whom are active investors with a mandate to invest in junior mining companies.

Our audience is selected and invited individually to ensure interest and relevance for the presenting company.

Meetings are non deal, small group, highly focused and engaged, with a lively Q and A to follow the main presentation.

We create awareness, and maintain interest in presenting companies by disseminating their future news to our entire investor group via email, social media, and our Monthly Review newsletter.

If you wish to present to our select group of active mining investors, please email andrew@city-investors-circle.com

Maple Gold Reports Final Assay Results at Eagle

Maple Gold Mines (TSX.V: MGM)

Reported results from the final 20% of assays that were received from the previously completed 14,720 metres of drilling at the 100%-controlled Eagle Mine Property.

Maple Gold Reports Final

Assay Results at Eagle and Completes More than 7,000 Metres of Deep Drilling at Telbel

Vancouver, British Columbia—(Newsfile Corp. – April 6, 2023) – **Maple Gold Mines Ltd. (TSX.V: MGM) (OTCQB: MGMLF) (FSE: M3G)** (“**Maple Gold**” or the “**Company**”) is pleased to report results from the final 20% of assays that were received from the previously completed 14,720 metres (“m”) of drilling at the 100%-controlled Eagle Mine Property (“Eagle”).

The Company is also pleased to report that more than 7,000 m have now been completed (6,000 m planned) at the Telbel Mine area of the Joutel Project, which is held by a 50/50 joint venture (the “JV”) between the Company and Agnico Eagle Gold Mines Limited.

The final batch of assays received from completed drilling at Eagle correspond to approximately 3,000 m of the 14,720 m drilled to-date.

The results continue to demonstrate continuity of mineralization and the potential significance of the multiple horizons/splays to the northwest of the former Eagle mine.

Highlights include:

- EM-22-008W intersected 6.2 grams per tonne (“g/t”) gold

- ("Au") over 2.0 m in the South Mine Horizon ("SMH") and 4.2 g/t Au over 3.9 m in sediments further downhole.
- EM-22-006W1 intersected multiple intercepts including 6.5 g/t Au over 1.2 m and 2.0 g/t Au over 3.0 m in the SMH and 2.3 g/t Au over 3.0 m at the microgabbro/Harricana sediment contact further downhole.
 - EM-22-006W4 intersected 4.0 g/t Au over 0.7 m within a broader 1.1 g/t Au over 14.2 m intercept within the SMH.
 - EM-22-017A intersected 2.9 g/t Au over 2.0 m and additional lower grade over broader near-surface intervals (1.0 g/t Au over 15.5 m from 93 m downhole).

Matthew Hornor, CEO of Maple Gold stated

"We have come along way since first consolidating the Joutel ground into our JV property package.

"All of our exploration and drilling work along the past-producing Eagle-Telbel mine trend is designed with the aim of defining high-grade zones of gold mineralization and additional mineral resources to complement the established potentially bulk-mineable resource present at Douay.

"Our first year of drilling at Eagle has more than covered our exploration spending commitments to earn a 100% interest and we are now in position to finalize our compilation and model updates to support focused follow-up drilling in areas we believe have the most promise to deliver additional high-quality ounces."

Maple Gold drills 24.4 G/T Gold Over 1m

Maple Gold Mines (TSX.V: MGM)

Reported initial assay results from the first drill hole of the Company's Phase II drill program at its 100%-controlled Eagle Mine Property in Québec.

Drill hole EM-22-009 intersected 11.4 grams per tonne gold over 3 m, including 24.4 g/t Au over 1 m.

MAPLE GOLD INTERSECTS 24.4 G/T GOLD

OVER 1 METRE WITHIN 11.4 G/T GOLD OVER 3 METRES IN PHASE II DRILLING AT EAGLE AND PROVIDES OPERATIONAL AND CORPORATE UPDATES

Vancouver, British Columbia—(Newsfile Corp. – August 15, 2022)
—**Maple Gold Mines Ltd. (TSXV: MGM) (OTCQB: MGMLF) (FSE: M3G)** (“**Maple Gold**” or the “**Company**”) is pleased to report initial assay results from the first drill hole of the Company’s Phase II drill program at its 100%-controlled Eagle Mine Property (“Eagle”) in Québec, Canada.

The Phase II program consisted of four (4) master diamond drill holes and one (1) daughter diamond drill hole totalling ~4,700 metres (“m”) to test potential extensions of mineralization along and beneath the past-producing, high-grade Eagle-Telbel mine trend.

The Company is also pleased to announce the appointment of Kiran Patankar as Chief Financial Officer, effective immediately.

Highlights:

- Drill hole EM-22-009 intersected **11.4 grams per tonne gold (“g/t Au”) over 3 m**, including **24.4 g/t Au over 1**

m, to the north of the modeled main Eagle-Telbel mine horizon in the hanging wall microgabbro (see Figure 1 for drill hole locations)

- The new EM-22-009 intercept and other notable high-grade historical intercepts hosted in the same microgabbro unit (including hole 16-77: 26.7 g/t Au over 2.5 m and hole 16-71: 26.4 g/t over 1.4 m within 14.3 g/t over 2.9 m) all point to the potential significance of this favourable structural-stratigraphic target
- Limited historical drilling in the hanging wall (see Figure 1) was not typically assayed for gold as previous operators were not focused on this mineralization style and target type
- The Company has drilled ~16,450 m out of approximately 30,000 m planned in 2022 across its Québec project portfolio; Eagle assays have now been reported for ~5,400 m (representing 59% of completed Eagle drilling).

.

.

Matthew Hornor, President and CEO of Maple Gold stated

“These initial Phase II assays include the best result thus far from our 2022 drilling at Eagle and the location of the intercept holds great significance for our exploration targeting going forward, including Phase III drilling later this year.

.”While core cutting has recently been impacted by electrical issues at site, we are implementing temporary and permanent solutions to improve efficiency and we expect the assay backlog to ease in the coming weeks.

"I am also delighted to welcome Kiran in his expanded role with the Company and we look forward to his experience as we navigate through our strategic and corporate finance initiatives."

**Maple Gold Mines Plans First
Drill Program After
Completing 3D Modelling at**

the Eagle Mine Property

Vancouver, British Columbia—(Newsfile Corp. – October 7, 2021) – **Maple Gold Mines Ltd. (TSXV: MGM) (OTCQB: MGMLF) (FSE: M3G)** (“**Maple Gold**” or the “**Company**”) is pleased to announce plans for a 2,500-3,000 metre (“m”) Phase I drill program based on the recently completed 3D geological and structural model at the Company’s 100% controlled Eagle Mine Property (“Eagle”) in Quebec, Canada.

Eagle is a 77-hectare property that hosts the historical Eagle Mine and covers a key segment of the past-producing Eagle-Telbel Mine Trend, which produced 1.1 million ounces of gold between 1974 and 1993^[1] under much lower gold prices than those prevailing today. Eagle is not currently a part of the Joutel Gold Project (“Joutel”) that is held by a 50-50 joint venture (“JV”) between the Company and Agnico Eagle Mines Limited (“Agnico”).

Highlights:

- Results indicate an opportunity to extend mineralization beyond the mined-out stopes and along observed sub-parallel gold trends that were never mined nor adequately tested.
- Significant historical drill intercepts^[2] adjacent to areas that have seen only limited drilling to-date (e.g. **32.9 g/t gold (“Au”) over 10.4 m, 16.2 g/t Au over 9.0 m** and **10.2 g/t Au over 10.2 m**) all point to the high-grade gold mineralization potentially remaining at Eagle.
- The Company’s 3D modelling and grade contouring work has identified numerous high priority drill targets, several

of which will be tested as part of a planned 2,500-3,000 metre Phase I drill program expected to commence in Q4 2021.

Maple Gold management comments

“When combined with the previously released 3D model results from the Telbel Mine area (see August 16, 2021 news release), these latest results from Eagle highlight the potential for near-mine extensions along the entire Eagle-Telbel Mine Trend as well as along sub-parallel target trends.

“Acquiring this strategic ground that hosted Agnico’s first gold mining operation with the benefit of an extensive drilling database and modern tools will allow us to effectively test high priority target areas that have seen only limited exploration activity since mine closure in 1993.”

Fred Speidel, VP Exploration of Maple Gold

Phase 1 Drill Targeting

Results from the Company’s initial 3D model grade contouring work at Eagle demonstrate the potential for relatively shallow mineral resources to be defined through further confirmation drilling as well as the untested potential below the previously mined-out areas.

The Eagle longitudinal section has also identified district-scale and deposit-scale southeast plunges of mineralization similar to those interpreted at Telbel as well as potential

intersections at depth with interpreted deposit-scale cross-plunges.
