Review 12th January 2025

Calibre Mining and Gold Road Resources both declared record gold production in December 2024, after slightly missing guidance earlier in the year.

The price of gold is climbing despite the US dollar and US Treasury rates climbing, a sign of politican and economic uncertainty?

It of course is absolutely the reason the precious metal is climbing when it should be falling. china has been buying again and despite the high US job numbers signalling a stop to imminent US rate cuts, the precious metals all rose in value, when in a normal market they would have fallen.

For UK investors invested in physical gold, and / or Australian, American, and Canadian stocks, the lower value of the pound increases the value of those investments, so it's a useful hedge against the UK Labour party train wrecking the economy, which they seem determined to do in short order.

After last week's falls, industrial and base metals were positive this week. It just seems to flip flop from week to week at the moment depending upon analysts' view of the Chinese economy and economic stimulus.

Turning to company news from stocks on our watchlist, the week

was positive, with **Calibre Mining** and **Gold Road Resources** both declared record gold production in December 2024, after slightly missing guidance earlier in the year.

G2 Goldfields was the star of the week, rising 10% as it prepares to spin out non core projects into G3.

West Red Lake Gold Mines posted some decent Pre-feasibility numbers ahead of the resumption of mining in early 2025.

Early stage explorer **Faraday Copper** released some positive drill intersections including 30m at 0.78% copper.

Copper at the Boomerang
Breccia and Expands Near-
Surface Mineralization at the**

Prada Breccia

January 8, 2025 – Vancouver, British Columbia – **Faraday Copper Corp. (TSX: FDY)** (OTCQX:CPPKF) (“**Faraday**” or the “**Company**”) is pleased to announce the results of five drill holes from its ongoing Phase III drill program at the Copper Creek Project, located in Arizona (“Copper Creek”). Two holes were drilled in the American Eagle area, two in the Rum area and one was a reconnaissance hole east of Area 51.

Paul Harbidge, President and CEO, commented

“It is exciting to see that our on-going drill program continues to deliver positive results.

“These results confirm additional near-surface mineralization above the existing resource in the American Eagle area, including the identification of high-grade copper at the Boomerang breccia.

“Moreover, significant copper was identified in veins outside the breccia domains. All fifteen drill holes, reported in the American Eagle area to date, have intersected copper mineralization above cutoff grade with numerous high-grade zones present.

“Additionally, drilling has demonstrated exploration potential well outside of the resource area, including east of Area 51 and at depth in the Rum area.”

Highlights

- Two drill holes, FCD-24-077 and FCD-24-082, **expand the known near-surface mineralization in the American Eagle area.**
- Drill hole FCD-24-082 intersected mineralization in the Prada breccia and the results demonstrate that the Boomerang breccia is mineralized at depth. Significant intercepts include:
 - At Prada, 118.28 metres (“m”) at 0.30% copper and 1.14 grams per tonne (“g/t”) silver from 168.92 m, including 22.54 m at 0.53% copper and 1.39 g/t silver from 213.83 m; and
 - At Boomerang, 109.42 m at 0.41% copper, 0.007% molybdenum, and 1.24 g/t silver from 417.90 m, including 40.06 m at 0.78% copper, 0.018% molybdenum, and 2.28 g/t silver from 459.08 m.
- North of the American Eagle breccia, drill hole FCD-24-077 intersected 197.20 m at 0.22% copper and 0.77 g/t silver from 25.37 m, including 16.11 m at 0.45%

copper and 1.35 g/t silver from 86.00 m. Mineralization in this area is largely vein-hosted, confirming that copper is not restricted to breccias.

- A reconnaissance drill hole east of Area 51 identified silver-rich skarn and vein-hosted mineralization over 58.08 m at 19.10 g/t silver from surface, including 8.90 m at 42.84 g/t silver and 0.34% copper from 47.23 m.
