

G2 Goldfields Update on Arrangement with G Mining and Spin-Out of G3

G2 Goldfields (TSX: GTW0)

Provided an update with respect to the proposed plan of arrangement involving G2, GMIN ,and G3 Goldfields Inc. whereby GMIN will, among other things, acquire all of the issued and outstanding G2 shares and G2 will complete the spin-out of G3.

G Mining and G2 Goldfields Provide Update on Arrangement with G Mining and Spin-Out of G3 Goldfields

July 13, 2026 07:00 ET | Source: [G2 Goldfields Inc.; G Mining Ventures](#)

TORONTO, July 13, 2026 (GLOBE NEWSWIRE) – **G Mining Ventures Corp. (“GMIN”)** (TSX: GMIN, OTCQX:GMINF) and **G2 Goldfields Inc. (“G2” or the “Company”)** (TSX:GTWO; OTCQX:GUYGF) are pleased to provide an update with respect to the proposed plan of arrangement (the “**Arrangement**”) involving G2, GMIN and G3 Goldfields Inc. (“**G3**”) whereby GMIN will, among other things, acquire all of the issued and outstanding G2 shares and G2 will complete the spin-out of G3.

The parties are actively working through the remaining closing conditions, which are expected to be completed by the end of July 2026. Closing of the Arrangement will follow shortly thereafter (such date to be announced by the Company and referred to herein as the “**Effective Date**”).

Louis-Pierre Gignac, CEO, President and Director of GMIN, stated:

“We remain fully committed to closing the acquisition and creating a tier-one gold mining hub in Guyana and one of the largest, lowest-cost gold operations in the Americas.”

Pursuant to the Arrangement, holders of G2 shares will receive

0.212 of a common share of GMIN and 0.5 of a common share of G3 for each G2 share held as of the close of business on the business day immediately prior to the Effective Date.

Following closing of the Arrangement, the G2 shares are expected to be de-listed from the Toronto Stock Exchange and will cease to be quoted on the OTCQX. G2 will also apply to cease to be a reporting issuer under applicable Canadian securities laws.

G3 has applied to list the G3 shares for trading on the Canadian Securities Exchange (“**CSE**”) following completion of the Arrangement, and listing is subject to G3 meeting the listing requirements of the CSE.

Additional details of the Arrangement are more fully described in the management information circular of the Company dated May 12, 2026 (the “**Circular**”), which is available under G2’s profile on SEDAR+ at www.sedarplus.ca.

**City Investors Circle is based in the financial district in
the City of London**

We present interesting and exciting junior mining companies listed on the ASX and TSX stock exchanges to a group of city professionals, and private investors, all of whom are active investors with a mandate to invest in junior mining companies.

Our audience is selected and invited individually to ensure interest and relevance for the presenting company.

Meetings are non deal, small group, highly focused and engaged, with a lively Q and A to follow the main presentation.

We create awareness, and maintain interest in presenting companies by disseminating their future news to our entire investor group via email, social media, and our Monthly Review newsletter.

If you wish to present to our select group of active mining investors, please email andrew@city-investors-circle.com

Altair Reports High-grade Gold Samples at Soko

Altair Minerals (ASX: ALR)

Announced results of PoleDipole survey and final report from its Phase I ground geophysics at SOKO, consisting of: Gradient IP Chargeability and Resistivity Survey covering 3.6km N-S strike with 64km of lines.

Altair Minerals S0K0 returns 35g/t Au & Targets Strengthen into Drilling

Altair Minerals Limited (ASX: ALR) ('Altair' or 'the Company') is pleased to announce results of PoleDipole survey and final report from its Phase I ground geophysics at S0K0, consisting of: Gradient IP Chargeability and Resistivity Survey covering 3.6km N-S strike with 64km of lines

Pole-Dipole Survey covering 3.0km N-S strike with 14km of lines

Ground Magnetic Survey covering 3.6km N-S strike with 64km of lines

In addition, Altair is pleased to report second batch of grab samples from SOKO. The grab samples were taken both within trenches during executing sampling and logging, and at surface during access clearing for trench excavation.

This batch of grab samples at SOKO returned results of 34.56g/t Au and 27.21g/t Au within Trench 6, which is the first deep trench at SOKO (~6m depth).

Altair Minerals Limited CEO, Faheem Ahmed, commented:

“The Pole-Dipole survey has delivered highly valuable information for both follow up geochemical programs and drill targeting, with the key structures identified aligning closely with existing soil anomalies and favourable geological contacts.

“Structure ‘M’ continues to stand out as a priority target, representing a deep-seated chargeability anomaly interpreted to be confined between two competent rock units.

“Importantly, the structure demonstrates exceptional continuity across survey sections, extending over an impressive ~2.5km strike length and maintaining a substantial

width of approximately 150-250m.

“While structure ‘N’ covers a shorter strike extent, it remains highly compelling due to its significant width and deep-tapping nature, situated right below a geochemical high. The anomaly is supported by both chargeability and resistivity responses and coincides with a distinct gold-in-soil geochemical anomaly, further enhancing its prospectivity.

“Furthermore, the magnetic inversion modelling has provided further clarity on the regional structural controls, reaffirming key deformation zones and improving our understanding of the orientations that will guide Altair’s ongoing geochemical follow-up and drilling programs.

“During trench sampling and geological logging, Altair has periodically collected grab samples prospective lithologies and exposed mineralised zones encountered both within the trenches and along cleared access routes. Encouragingly, a grab sample from the Company’s first deep trench at S0K0 returned the highest grade recorded at the project to date, assaying an outstanding 34.56g/t Au.

“The duricrust profile across S0K0 is generally 3–4m thick, with shallow trenches of approximately 3m depth typically remaining within anomalous lateritic material. In contrast, deeper trenches reaching approximately 6m depth into the saprolite horizon are beginning to demonstrate indications of potential primary mineralisation, despite the material remaining largely weathered and leached.

“Our exploration continues to accelerate on all fronts, with the team currently planning for scaling up programs at both NP and SOKO, which we look forward to updating the market upon finalisation.

“Importantly, diamond drilling is scheduled to commence at NP in the coming week.”
