Boab Metals New Corproate Presentation

Boab Metals (ASX: BML)

The lead and silver company looking to enter production in 2025 has issued an updated corporate presentation.

With offtake partners signed up this looks a very realistic project with low capex and a heallthy margin due to the silver credits.

Boab Metals (ASX: BML)

The lead and silver company looking to enter production in 2025 has issued an updated corporate presentation.

With offtake partners signed up this looks a very realistic project with low capex and a heallthy margin due to the silver credits.

Whilst all the focus in on lithium and EV related metals, lead is still a significant metal in its own right, but isn't very sexy so is overlooked by investors.

I like Boab because they are in an unpopular metal (from an investor perspective) yet are quietly going about their business and securing iofftake partners ahead of a production decision.

The capex looks quite reasonable for a mining project, so, barring a collapse in the proce of lead, which is unlikely in my opinion, this looks a decent development project with a fair chance of going into production within two years.

Unusually for an Australian listed company, the share count is

low, so there’s a lot to like here in my opinion.

BOAB are on my watchlist for now, the end of the Australian tax year in June may present an opportunity to buy a few cheap shares, so firmly on the radar.

Rumble Resources New

Corporate Presentation at the RIU Conference

Rumble Resources CEO Shane Sikora presented a new corporate presentation to the RUI Explorers Conference in Australia recently.

This is an impressive summary of where the company is now, and the potential expansion of their Western Australian exploration projects to giant status.

Zinc is the predominant metal, with lead credits.

Company Highlights

The flagship Earaheedy project is located 110km north of Wiluna, Western Australian in the Earaheedy Basin.

Rumble owns 75% of E69/3464 and **Zenith Minerals Ltd (ASX: ZNC)** owns 25%.

Rumble also has two contiguous exploration licenses, ELA69/3787 and ELA69/3862 that is held 100%.

Since the Major Sedimentary hosted base metal discovery in April 2021, drilling has uncovered a rapidly expanding world class scale Zn-Pb-Ag-Cu base metal system, with the drilling continuing to make discoveries and new multiple large-scale targets emerging.

Rokmaster Drills 34.75 M Wide Zinc-Lead Zone Hosting Significant Silver at Duncan Lake Zinc Project.

May 17, 2022

Download PDF

(Vancouver, May 17, 2022)– Rokmaster Resources Corp. (TSX.V: RKR) (OTCQB: RKMSF) (FSE: 1RR1) (“**Rokmaster**” or the “**Company**”) is pleased to announce initial assay results from diamond drilling on the Duncan Lake Zinc Project.

An initial drilling campaign was completed in early April 2022 with the purpose of confirming historical drill intersections as well as providing valuable geological information.

Three drillholes totalling 681.2 metres were wedged off historical Cominco Ltd.’s (now “Teck Resources Limited” or “Teck”) drillhole 97-12, located 2.0 kilometres northwest of Teck’s Duncan Mine Portal (Figure 1). Partial assay results for one of the three drillholes, D22-02, are presented in this news release. Assay results for drillholes D22-01, D22-03, and parts of D22-02 remain in process.

Rokmaster Resources management comments

“The trend of increasing silver grades to the north of the Duncan Lake mine suggested by Rokmaster (News Release Dec. 20, 2021) is supported by the enhanced silver values obtained from DDH D22-02.

“The data suggests that carbonate hosted lead zinc occurrences in the Duncan Lake area offers shareholders the opportunity to purse both a strong zinc-lead target as well as a promising silver enhanced target.

“Rokmaster’s Duncan Lake exploration programs are undertaken

in an area with excellent access, near Teck's smelter, with the right metallogenic 'address', and on a claim package large enough to reflect the scale of this impressive mineralizing system."

John Mirko, President and CEO of Rokmaster Resources

Rumble Resources Report Significant Drilling Results from the Chinook Prospect at Earaheedy

Rumble Resources Limited (ASX: RTR) ("Rumble" or "the Company") is pleased to announce significant new drilling

results at the Chinook Zn-Pb-Ag-Cu Prospect located within the Earaheedy Project located 140km northeast of Wiluna, Western Australia.

The results include the most recent hole within the newly discovered high grade Kalitan
Feeder Zone.

Rumble Resources management comments

*“Following the Chinook Zn-Pb-Ag-Cu sulphide discovery in April 2021, broad spaced 500m x 100m scoping drilling defined a very large shallow flat lying 4.1km x
1.9km mineralised footprint that remains open in all directions.*

*“Later in 2021, Rumble commenced infill drilling on a 200m x 100m grid, with the impressive first assay results received from this program showcasing the potential to
define a very large-scale open pit deposit with strong grade continuity and multiple large high-grade Zn-Pb core zones, as shown by our grade contouring in images 2 & 4.*

“Drill hole and geophysical analysis provided the exploration team with the essential technical understanding to discover the high grade Kalitan Feeder Zone at Chinook in December 2021.

“The 2022 RC/DD drilling program will be the first to specifically define the open, 2.3km long Kalitan Feeder Zone, which continues to deliver high-grade Zn-Pb intercepts, and target other inferred high-grade Zn-Pb zones within feeder structures that are already delineated within and outside the existing Chinook mineralised footprint.

“Another recent exciting development is the interpretation of the airborne magnetics has shown the structural features that host the Chinook mineralisation including a multitude of inferred high-grade feeders and domal features, extend west of the current limit of the Chinook mineralization into the 100% owned newly granted E69/3787, host to 15km’s of strike named the Sweetwater trend.

“Rumble is in advanced stages of completing heritage surveys along the Sweetwater trend and once completed, drilling is planned to rapidly extend and define the limits of the Chinook Zn-Pb-Ag-Cu deposit and target further large-scale discoveries.”

Rumble Resources Managing Director, Mr Shane Sikora

About Boab Metals

Boab Metals Limited (ASX: BML) is a Base & Precious Metals Exploration and Development Company based in Perth Western Australia. The project is focused on lead and silver, but has other metals.

The Company is edging closer to development at it's 75% owned Sorby Hills Project following outstanding drilling success and a recent Resource update (44.9Mt at 4.3% Pb equivalent).

The Sorby Hills Base Metals Project is located 50km north east of Kununurra in the East Kimberley and just 150km from Wyndham Port.

Established infrastructure and existing permitting allows for fast track production.
