

Minera Alamos Price Weak as Osisko Sell Down

Minera Alamos (TSX.V: MAI)

The Minera Alamos price has been weak recently, (not helped by the lower gold price obviously), but with such positive news of the first gold pour being announced, it did seem oversold.

It has now been revealed that Osisko Gold Royalty have sold some 14 million shares between the 11th and 13th November.

Minera Alamos Share Price Weak as Osisko Gold Royalty Reduce their Holding by 21.4%

Minera Alamos (TSX.V: MAI) price has been weak recently, (not helped by the lower gold price obviously), but with such

positive news of the first gold pour being announced, it did seem oversold.

It has now been revealed that **Osisko Gold Royalty** have sold some 14 million shares between the 11th and 13th November. This reduced their shareholding by 21.4%, and brought in \$8,072,300.

It seems the selling has stopped, for now.

The risk to investors is that, if they try and take advantage of this lower price and buy, and run the price back up, Osisko CEO Roosen may then issue the order to commence selling again.

A bit of a dilemma, but it would seem that Osisko don't want to sell at a lower price than the present one, so it's possible that any buying at this level will be at the floor, provided the company delivers at the operational level of course.

Personally, as a shareholder, it's positive to know what caused the share price weakness.

(TSXV:SLVR and OTCQB:SLVTF)** (“Silver Tiger” or the “Corporation”) has intersected high grade silver and gold mineralization in the Protectora and Caleigh veins within the El Tigre gold alteration zone approximately 1.7 kilometers north of the historic El Tigre Mine.

Silver Tiger is pleased to provide drill results for its first 10 drill holes on the Protectora and Caleigh veins approximately 1.7 kilometers north of the historic El Tigre Mine.

Highlights from the drilling include the following:

- Hole 163 on the Protectora Vein – 0.5 meters grading 2,049.1 g/t Ag Eq from 16.9 meters to 17.4 meters consisting of 1,782 gpt Ag and 3.56 gpt Au and a second intercept of 0.5 meters grading 1,440.6 gpt Ag Eq from 51.9 meters to 52.4 meters consisting of 1,374 gpt Ag and 0.89 gpt Au

Silver Tiger Metals management comments

“The historic El Tigre Mine just to the south of our current drilling produced over 100 million silver equivalent ounces at an average grade of over 2 kilograms per ton silver

equivalent between 1908 and 1938 (Craig, 2012).

“Our initial results from the first 10 holes of the 2020 drilling program on the Protectora and Caleigh Veins has intersected near surface high-grade silver mineralization similar to that mined a century ago at the historic El Tigre Mine.

“Just as exciting for us are the first intercepts of the gold alteration zone around the high grade silver veins like the gold halo that delivered the majority of our National Instrument 43-101 resource estimate around the historic El Tigre Mine.

“We are drilling with 3 diamond drill rigs and will continue to test the strike extensions of the Caleigh, Protectora and Fundadora Veins.

“I am very pleased with the rapid progress our drilling and exploration teams have made.”
