

# Cabral Gold Results of Infill Drilling at the MG Gold deposit

**Cabral Gold Inc. (TSX.V: CBR)**

Announced results from 32 additional reverse circulation infill drill holes from gold-in-oxide material at the MG starter pit within the Cuiú Cuiú Gold District, Brazil.

Results have been received on an additional 32 infill RC holes targeting the gold-in-oxide material in the eastern and central parts of the MG starter pit.

Additional Results of Infill**

# Drilling at the MG Gold deposit, Cuiú Cuiú Gold District, Brazil

May 26, 2026

Vancouver, British Columbia—(Newsfile Corp. – May 26, 2026) —**Cabral Gold Inc. (TSXV: CBR) (OTCQX: CBGZF) (“Cabral” or the “Company”)** is pleased to announce results from 32 additional reverse circulation (“RC”) infill drill holes from gold-in-oxide material at the MG starter pit within the Cuiú Cuiú Gold District, Brazil.

## Highlights

- Results have been received on an additional 32 infill RC holes targeting the gold-in-oxide material in the eastern and central parts of the MG starter pit. The program of infill drilling is aimed at improving the confidence around the current mine plan at MG and upgrading the current reserve. A total of 158 infill RC holes at MG totalling 5,573m have now been completed. Assay results are pending on the remaining 76 infill holes at MG
- Notable results from this batch of RC drill results from MG include;
  - **19m @ 0.65 g/t gold** from surface in RC674

- and **10m @ 1.40 g/t gold** in RC674
- **27m @ 0.54 g/t gold** from surface in RC675
- **35m @ 0.50 g/t gold** from surface in RC680
- **39m @ 0.70 g/t gold** from surface in RC681

## **Brian Arkell, Cabral's VP Exploration and Technical Services commented,**

*"We've now completed infill drilling aimed at upgrading our two-year MG oxide pit to measured reserve classification, giving us increasing confidence in achieving operational results in line with the PFS."*

*"Although we are still awaiting assays from a number of holes, results thus far have been exceptional with our initial model reconciliation falling within 3% of our existing model."*

*"Our mining team is now in place and is continuing with early ore control, processing related works, and fine tuning of the short term mine plan."*

*"With the MG infill drilling completed, the RC rig will return to focussing on exploration work and particularly establishing an initial resource for the gold-in-oxide material at the Jerimum Cima discovery."*

# MG RC Infill Drill Results

The MG gold deposit is one of the two main gold deposits that currently comprise the Indicated and Inferred resource base at Cuiú Cuiú (see Figure 1).

As with the nearby Central gold deposit, the upper portion of the subvertical MG gold mineralization is extensively weathered resulting in a vertical profile of saprolite extending to 60m depth.

This saprolite together with the overlying blanket sediments and soils, which are also mineralized, will form the starter pit for the Phase 1 gold-in-oxide mining operation which is due to commence production in Q4 2026.

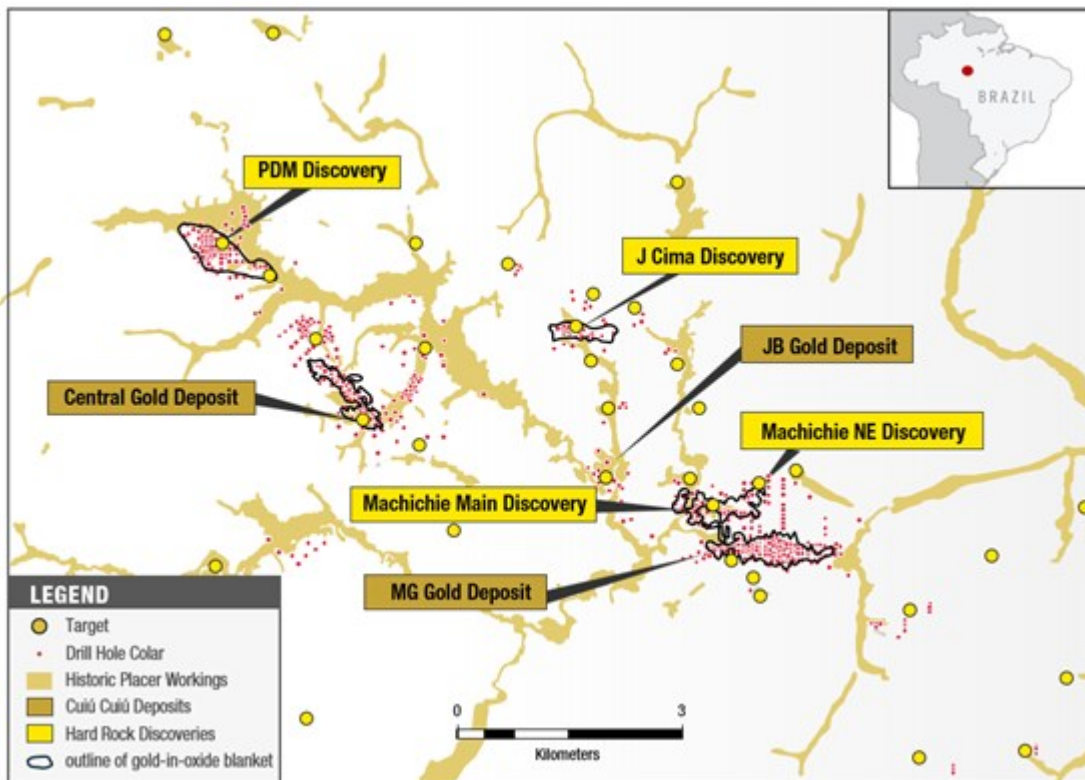

Figure 1: Map showing location of known gold deposits at MG, Central, and JB. The location of new discoveries at PDM,

*Machichie NE and Machichie Main and Jerimum Cima discovery are also shown.*

**City Investors Circle is based in the financial district in the City of London**

We present interesting and exciting junior mining companies listed on the ASX and TSX stock exchanges to a group of city professionals, and private investors, all of whom are active investors with a mandate to invest in junior mining companies.

Our audience is selected and invited individually to ensure interest and relevance for the presenting company.

Meetings are non deal, small group, highly focused and engaged, with a lively Q and A to follow the main presentation.

If you wish to present to our select group of active mining investors, please email [andrew@city-investors-circle.com](mailto:andrew@city-investors-circle.com)
