Impact – Lake Hope HPA Pre-Feasibility Study and Maiden Ore Reserve

Released 16 Jun 25

LAKE HOPE RE-FEASIBILITY STUDY AND MAIDEN ORE RESERVE

Impact Minerals Limited (ASX:IPT) is pleased to announce the positive results of a Preliminary Feasibility Study (PFS) for the Company's Lake Hope High Purity Alumina (HPA) Project, located 500 km southeast of Perth in the Tier 1 mining jurisdiction of Western Australia. The PFS results align with those of the Scoping Study on the project released to the ASX on November 9th 2023.

The PFS highlights the project's exceptionally strong economics and outlines a pathway for Lake Hope to become a global supplier of low-cost, low-carbon HPA, benefiting both the local Ngadju Aboriginal Native title holders and the broader community.

The robust economics stem from the unique characteristics of the Lake Hope deposit, which facilitate cost-effective mining and processing.

The PFS confirms that, to the best of Impact's knowledge based on published data, the Lake Hope project could be among the lowest-cost producers of HPA globally, potentially by a significant margin of at least 30%.

Given these strong fundamentals, Impact will issue 120 million shares, escrowed for 12 months, to exercise its option to acquire an 80% interest in Playa One Pty Ltd, which owns the Lake Hope assets and intellectual property, including two patents for metallurgical processes (ASX Release March 21st 2023).

Work will now commence on a Definitive Feasibility Study (DFS), which will include the construction of a pilot plant to produce HPA samples at scale for discussions on offtake agreements. The pilot plant project, currently underway, will be part-funded by the recent federal government grant awarded to Impact Minerals in collaboration with CPC Engineering and Edith Cowan University (ASX Release October 22nd 2024).

Lake Hope PFS Summary

Highlights

- Very strong economic metrics and low-cost production:
NPV10 A\$1.165 billion (with no by-product revenue)
- Capex A\$259 million
- Opex US\$5,860 per tonne excluding by-product credit
- Potential Opex of <US\$4,500 with by-product credit
- Maiden Probable and Proved Ore Reserve of:
1.7 Mt at 26% Al₂O₃ for 450,000 tonnes of contained Al₂O₃.
- Election to proceed to an 80% interest in Playa One Pty Ltd providing Impact with 80% ownership in the Lake Hope resource and intellectual property.
- Definitive Feasibility Study to commence with construction of pilot plant and investigation into the integration of Lake Hope with the HiPurA process.

Impact Minerals' Managing Director, Dr Mike Jones, said, “
“The Lake Hope PFS clearly demonstrates that Impact Minerals is now on the cusp of delivering a significant, low-cost and highly scalable HPA project.”

Cerro de Oro Funding Package Update

Toronto, Ontario – (Newsfile – October 3rd, 2023) **Minera Alamos Inc.** (“Minera” or the “Company”) (TSXV: MAI) is pleased to announce the results of an independent estimate of the Mineral Resources currently outlined at the Santana gold project (the “Project”) in Sonora, Mexico.

The Resource Estimate was prepared in accordance with National Instrument 43-101 Standards of Disclosure for Mineral Projects (“NI 43-101”) by Scott Zelligan P.Geo, an independent QP as defined in NI 43-101.

A Technical Report with the details of the Resource Estimate will be filed on SEDAR plus under the Company’s profile within 45 days of the date of this news release.

Darren Koningen, CEO, stated,

“This maiden resource covers just the development zones in the immediate area of the current Santana mine operations and is a major step in highlighting the robust resource data and metallurgical input that provided the Company with comfort in developing our first low capital mine.

“The next open pit in the development plans for the Project, the Nicho main zone, is largely drilled off in sufficient detail for the estimation of measured and indicated resources with a grade and strip (waste:mineralization) ratio that we expect to provide meaningful low-cost production gold ounces for the next 5-6 years as the rest of the property is explored and better understood.

“Notable nearby targets such as Benjamin which are outside of our current operations area have shown some excellent potential but will require more preliminary exploration and additional drilling to properly understand mineralization controls, grade distribution and tonnage.

“Ultimately, this current resource statement is just the first, conservative iteration of the geological potential across the broader Santana property with a goal of the current starter mine being a source of organic funding to prove up the greater potential of the area. “

The Resource Estimate for the Santana gold project – contains 198,000 ounces of Measured and Indicated gold resources (9.61 Mt at 0.65 g/t) and an additional 103,000 oz of Inferred gold resources (5.51 Mt at 0.58 g/t). Table 1 shows the Mineral Resource estimate by zone for the Santana Project.
