District, Brazil

October 20, 2026

Vancouver, British Columbia—(Newsfile Corp. – October 20, 2026) – **Cabral Gold Inc. (TSXV: CBR) (OTCQX: CBGZF) (“Cabral” or the “Company”)** is pleased to announce results from five additional diamond drill holes drilled in the Central North target area, immediately to the north of the Central Gold deposit within the Cuiú Cuiú Gold District, Brazil.

Highlights

- Reconnaissance diamond drilling along trend and to the north of the existing Central gold deposit at Cuiú Cuiú has returned encouraging results, extending gold mineralization at depth and along strike, including **8.2m @ 2.50 g/t gold** from 149.7m depth including **0.5m @ 21.27 g/t gold** in DDH391
- In addition, drilling along the NW extension of the main Central deposit returned broad intervals of gold mineralization including **10.4m @ 0.45 g/t gold** from 173.0m depth in DDH395 and **13.0m @ 0.41 g/t gold** from 96.0m depth in DDH397 extending the modeled gold mineralization at depth
- Drilling at the Central North target, located 400m NNW of Central, also extended gold mineralization at depth and along strike, intercepting **18.0m @ 0.72 g/t gold** from 145.9m depth in DDH400
- These results build on recent drilling at the Mutum target 1km to the north-west which recently returned encouraging results including **20.7m @ 1.57 g/t gold** in DDH387

Elton Pereira, Cabral's VP Exploration commented,

"The Central – PDM trend within the Cuiú Cuiú district extends for at least 5km and currently hosts two of the six known gold deposits identified to date within the district.

"The trend contains several excellent targets outside of the known deposits and is a high priority as we seek to build on the existing resource inventory within this part of the district.

"Recent drilling in the Central North area and the nearby Mutum target continue to demonstrate the potential for additional mineralization well beyond the currently defined Central resource.

"The higher-grade interval in DDH391, together with the results from Central North, provide further evidence that the mineralized system remains open at depth and along strike to the north.

“Central North sits between the Central deposit and the Mutum target, where we recently reported 20.7m @ 1.57g/t gold, highlighting the significant exploration potential across this broader area.

“These results bode well for the updated resource estimate for the Cuiú Cuiú district which is expected later this year.”
