

# Catalyst Metals Makes Intercepts outside Trident's Resource envelope

## Catalyst Metals (ASX: CYL)

Reported recent drilling results from the Trident Gold Project, located on the Plutonic Gold Belt.

The results are from a drilling program targeting extensions of mineralisation outside of the Resource envelope.

## **Catalyst Metals Makes Further intercepts outside Trident's Resource envelope**

**Catalyst Metals Limited (Catalyst or the Company) (ASX:CYL)** is pleased to report recent drilling results from the Trident Gold Project, located on the Plutonic Gold Belt.

The results are from a drilling program targeting extensions of mineralisation outside of the Resource envelope.

# Highlights

- Catalyst has drilled a number of significant intercepts outside the Trident Resource envelope
- These intercepts suggest the Trident Resource will continue to grow, giving greater confidence in Catalyst realising its 2Moz Reserve target\* for the Plutonic Gold Belt
- Intercepts such as 22.0m at 5.2 g/t and 11m at 7.1 g/t situated 80m and 250m beyond the Resource respectively, are encouraging signs of the deposit's further potential
- *Trident is a gold project lying 30km north-east of the underutilised, but operational, Plutonic processing plant. The project is fully permitted with development underway*
- *It is the second largest Resource on the Belt and as such has the potential to meaningfully change the Reserve mine life of the current operations*
- In late January 2025, Catalyst began drilling the deposit in earnest. This resulted in the recent release of an update to the 2023 Trident Resource. The updated 2025 Trident Resource<sup>2</sup> resulted in the following:
  - o 63% increase to the Resource, from 508koz to 795koz
  - o 43% increase in grade from 3.7 g/t to 5.3 g/t
  - o Indicated Resources growing from 257koz at 5.0 g/t to 527koz at 6.4 g/t
- Now Catalyst is releasing these recent drill results. These results lie outside this recently updated Resource estimate, indicating further increases to the Resource
  - o 22.0m @ 5.2 g/t o 9.1m @ 10.2 g/t o 9.3m @ 3.1 g/t
  - o 11.0m @ 7.1g/t o 5.0m @ 5.4 g/t o 9.0m @ 3.0 g/t

- o 6.0m @ 4.5 g/t o 4.0m @ 6.9 g/t o 1.0m @ 24.5 g/t
- Encouragingly, each intercept lies on the same plane as the Trident Resource trend
- These results, with planned additional drilling, will target conversion of these new areas into an inferred Resource.

## **Catalyst's MD & CEO, James Champion de Crespigny, commented:**

*"The Trident gold deposit is growing quickly. Surface drilling allows this.*

*"We know from past drilling that the system is still alive 1km down. The results released here lie between the existing 795koz Resource, all of which sits within 400m from surface, and 1km.*

*"11m at 7.1 g/t is over 250m from the Resource envelope. Such encouraging intercepts, so far from the Resource, gives us considerable confidence in extending the current Reserves."*

# Catalyst Announces First Stopping Ore From Plutonic East

**Catalyst Metals (ASX: CYL)**

Announced first stopping ore at Plutonic East.

Plutonic East is the first of three mines to be developed by Catalyst in its plan to double production across the Plutonic Gold Belt for A\$31m over the coming 12-18 months.

# Catalyst Metals – First stoping ore from Plutonic East

*Catalyst continually striving to lower operating risk of Plutonic Belt operations*

**Catalyst Metals Limited (ASX:CYL)** (Catalyst or the Company) is pleased to announce first stoping ore at Plutonic East.

Plutonic East is the first of three mines to be developed by Catalyst in its plan to double production across the Plutonic Gold Belt for A\$31m over the coming 12-18 months

First stoping ore at Plutonic has been achieved on-time and budget, having been funded through operating cashflows.

The smaller development costs and shorter lead time for Plutonic East's development reflects the established infrastructure and sunk capital across the Plutonic Gold Belt.

- Plutonic East is a pre-existing underground mine situated 2km from the Plutonic processing plant
- Catalyst began redevelopment activities in April 2024; Catalyst is today pleased to announce first stoping ore
- Plutonic East ore will be processed via the currently

underutilised Plutonic processing plant

- ***The reasoning behind re-opening Plutonic East was two-fold:***
  - o Firstly, Plutonic's main ore source is the Plutonic underground mine; at present it is predominantly a remnant mine and by opening up Plutonic East, our operational team will have more ore sources, more mining fronts and therefore lower operating risk; and
  - o Secondly, the Plutonic Gold Belt has several new mines it plans to open; as a newly formed team, Plutonic East presents a lower risk development proposition and therefore attractive training ground for these other mines
- Bringing Plutonic East online is Catalyst's first step in demonstrating its ability to develop the Plutonic Gold Belt

*Catalyst acquired the Plutonic Gold Belt 20 months ago. In that time, it has turned Plutonic from loss making to profitable, cleaned up its balance sheet, settled a myriad of inherited legal disputes, is executing on a belt wide 320,000 metre exploration program and has now brought its first of three new mines into operation,*

Catalyst will now begin turning its attention to the development of the two next development opportunities on the Plutonic Gold Belt – K2 and Trident

**Catalyst's Managing Director & CEO,**

## James Champion de Crespigny, commented:

*“Catalyst’s focus has always been about the long-term value of the Plutonic Gold Belt, not just the Plutonic main underground mine.*

*“Plutonic East coming online is the first step in realising the value of the belt.*

*“It gives more ore sources and more options to our team and lowers the operating risk profile of the business”*
