# Maple Gold Mines Plans First Drill Program After Completing 3D Modelling at the Eagle Mine Property

Vancouver, British Columbia—(Newsfile Corp. – October 7, 2021) – **Maple Gold Mines Ltd. (TSXV: MGM) (OTCQB: MGMLF) (FSE: M3G)** ("**Maple Gold**" or the "**Company**") is pleased to announce plans for a 2,500-3,000 metre ("m") Phase I drill program based on the recently completed 3D geological and structural model at the Company's 100% controlled Eagle Mine Property ("Eagle") in Quebec, Canada.

Eagle is a 77-hectare property that hosts the historical Eagle Mine and covers a key segment of the past-producing Eagle-Telbel Mine Trend, which produced 1.1 million ounces of gold between 1974 and 1993[1] under much lower gold prices than those prevailing today. Eagle is not currently a part of the Joutel Gold Project ("Joutel") that is held by a 50-50 joint venture ("JV") between the Company and Agnico Eagle Mines Limited ("Agnico").

**Highlights:**

- Results indicate an opportunity to extend mineralization

beyond the mined-out stopes and along observed sub-parallel gold trends that were never mined nor adequately tested.

- Significant historical drill intercepts[2] adjacent to areas that have seen only limited drilling to-date (e.g. **32.9 g/t gold ("Au") over 10.4 m**, **16.2 g/t Au over 9.0 m** and **10.2 g/t Au over 10.2 m**) all point to the high-grade gold mineralization potentially remaining at Eagle.
- The Company's 3D modelling and grade contouring work has identified numerous high priority drill targets, several of which will be tested as part of a planned 2,500-3,000 metre Phase I drill program expected to commence in Q4 2021.

## Maple Gold management comments

*"When combined with the previously released 3D model results from the Telbel Mine area (see August 16, 2021 news release), these latest results from Eagle highlight the potential for near-mine extensions along the entire Eagle-Telbel Mine Trend as well as along sub-parallel target trends.*

*"Acquiring this strategic ground that hosted Agnico's first gold mining operation with the benefit of an extensive drilling database and modern tools will allow us to effectively test high priority target areas that have seen only limited exploration activity since mine closure in 1993."*

**Fred Speidel, VP Exploration of Maple Gold**

**Phase 1 Drill Targeting**

Results from the Company's initial 3D model grade contouring work at Eagle demonstrate the potential for relatively shallow mineral resources to be defined through further confirmation drilling as well as the untested potential below the previously mined-out areas.

The Eagle longitudinal section has also identified district-scale and deposit-scale southeast plunges of mineralization similar to those interpreted at Telbel as well as potential intersections at depth with interpreted deposit-scale cross-plunges.

# Maple Gold Intersects Bonanza Grade Gold

**Maple Gold Mines Ltd. (TSX.V: MGM)**

Reported results from the final nine holes completed during the 10,217-metre winter drill campaign at the Douay Gold Project  in Quebec, Canada.

Douay is held by a 50/50 JV between the Company and Agnico Eagle Mines Limited.

# MAPLE GOLD INTERSECTS BONANZA GRADE GOLD INCLUDING 334.0 G/T GOLD OVER 1.0 METRE IN THE PORPHYRY ZONE AT DOUAY

- Print
- Email

Vancouver, British Columbia–(Newsfile Corp. – October 4, 2021) – **Maple Gold Mines Ltd. (TSXV: MGM) (OTCQB: MGMLF) (FSE: M3G)** ("**Maple Gold**" or the "**Company**") is pleased to report results from the final nine holes completed during the 10,217-metre winter drill campaign at the Douay Gold Project ("Douay" or the "Project") in Quebec, Canada.

Douay is held by a 50/50 joint venture (the "JV") between the Company and **Agnico Eagle Mines Limited.**

# Highlights:

- Drill hole DO-21-295 intersected **334.0 g/t gold (Au) over 1.0 metre (m)** (from 57.0 m downhole) within the western portion of the Porphyry Zone (see Figure 1 for drill hole locations), representing **one of the highest-grade intercepts** ever encountered at Douay.
- DO-21-295 also intersected **72.7 g/t Au over 0.7 m** (from 358.0 m downhole), beyond the northern extent of the of the 2019 RPA NI43-101 Resource Estimate ("RPA 2019") Porphyry Zone conceptual pit (see Figure 2).
- At the Main Zone, DO-21-304 intersected **1.5 g/t Au over 15.0 m** (from 428.0 m downhole), one of the better sediment-hosted intercepts reported to date. In addition, DO-21-306 intersected **4.0 g/t over 5.0 m** (from 143.0 m downhole), within a broader and more variable grade envelope that averaged **1.6 g/t over 15.0 m**. Additional multi-gram gold intercepts were obtained from other drill holes in this area (see Table 1 for full results).
- The JV's **maiden drill campaign returned three of the top five intercepts** ever reported at Douay in terms of gold accumulation (grade x thickness), validating the Company's targeting methodology.

## Maple Gold management comments

*"Encountering multiple bonanza grade gold zones flanking either side of the Casa Berardi North Fault highlights the significant exploration potential for the sparsely-drilled northern flank of the Porphyry Zone.*

*"The deeper bonanza grade gold mineralization in hole DO-21-295 remains open to the east, with just a single drill hole over more than 600 m, which provides a compelling exploration target for follow up drilling.*

*"We are excited to build upon the impressive results from the JV's maiden drill campaign, with drilling expected to resume in the Nika and 531 Zones in Q4 2021."*

**Fred Speidel, VP Exploration  Maple Gold**

The Company has now reported all assay results from the winter 2021 drill campaign. An updated Douay mineral resource estimate, which will include more than 19,000 m of additional drilling since the RPA 2019 mineral resource estimate, including over 15,000 m within the current resource area, is expected to be completed in Q4 2021. Additional details regarding Q4 2021 drilling sites and plans are expected be released in the coming weeks.

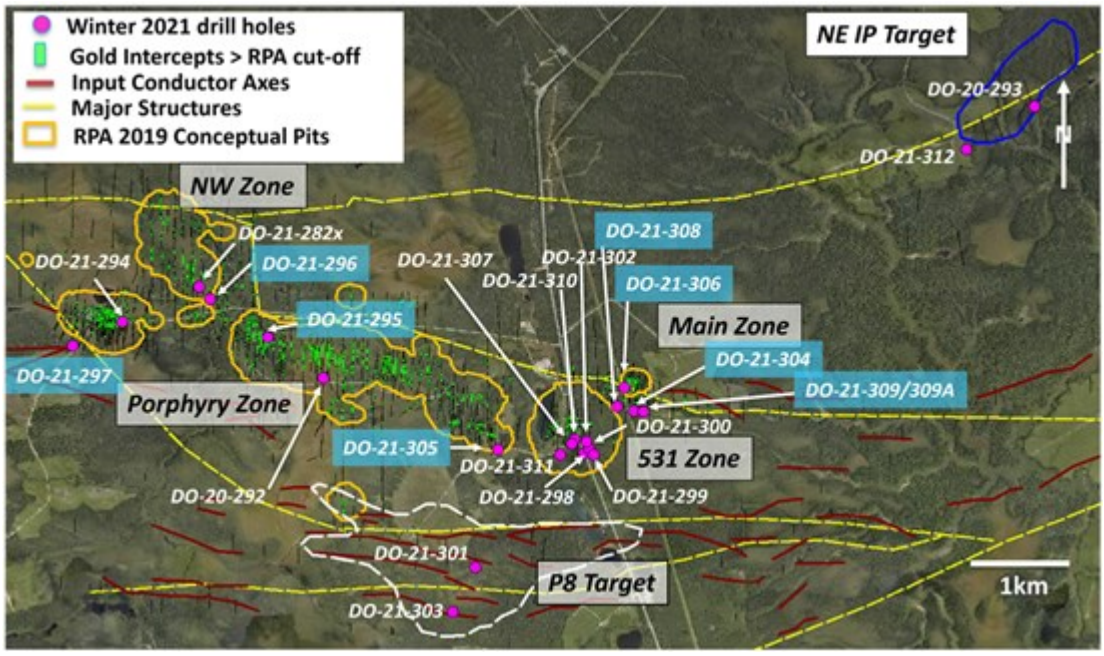

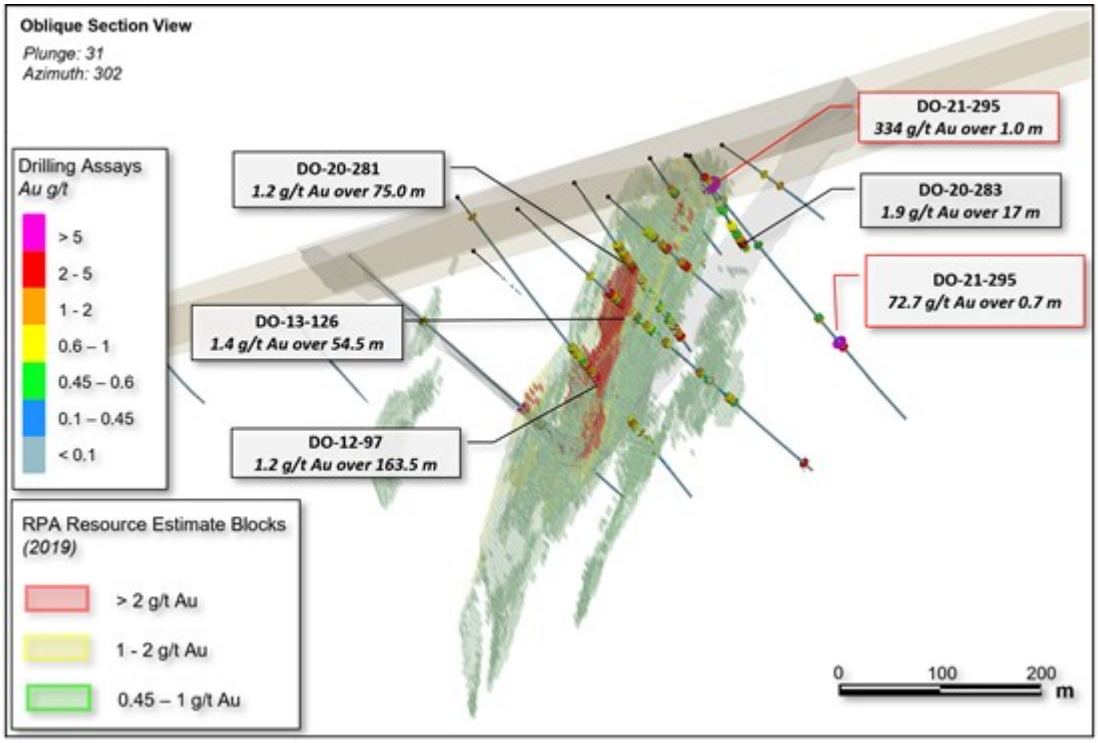

**Figure 1:** Plan view of 2021 drill collars (new results highlighted in blue).
