Rokmaster samples 18.26 g/t Au Eq over 3.50 m on Revel North Project

December 19, 2022

[Download PDF](#)

(Vancouver, December 19, 2022 – Rokmaster Resources Corp. (TSX.V: RKR) (OTCQB: RKMSF) (FSE: 1RR1) (“Rokmaster” or “the Company”) reports the final assay results from the 2022 prospecting programs on it’s 100% owned Revel North Properties, extending more than 40 km NW of Revel Ridge

The Revel North Properties consist of three primary mineral claim groups: The Keystone Property, the Downie Gold Property, and the Rift Property, all located north of the Revel Ridge Project.

Work completed in 2022 on the Revel North Properties included prospecting, soil sampling, and channel sampling and was completed concurrently with the summer drill program on the Revel Ridge Project.

The 5,276 hectare Keystone Property covers the majority of the Keystone Anticline, a southwest-verging recumbent folded mass of Index Formation carbonate, clastic, and mafic metavolcanic

rocks. The Keystone Anticline occurs in the hanging wall of the possible northwestern extension of the Akolkolex Thrust, the regional structure potentially related to the orogenic gold mineralization on the Revel Ridge Project.

Limited work in 2021 on the Keystone Property found a historical trench hosting arsenopyrite mineralization which returned up to 4.5 g/t Au and up to 274 g/t Ag (see [news release dated November 14, 2021](#)).

The Keystone Property was the subject of early-stage prospecting and soil sampling in 2022. The 2022 field program successfully located, sampled, and upgraded undocumented historical adits and trenches hosting replacement-style Zn-Pb-Ag-Au mineralization across the central area of the Keystone Property ([Figure 2](#)).

The 3,175 hectare **Downie Gold Property** was subject to initial reconnaissance prospecting in 2021 (see [news release dated November 14, 2021](#)) where encouraging results led to channel samples being collected from the KJ Zone in 2022. The KJ Zone is characterized by broad exposures of massive pyrrhotite-pyrite-galena mineralization associated with discordant stockwork veins and silicification hosted by limestones. Three of the seven continuous channel samples returned significant assay results.

John Mirko, President and CEO, comments;

“Rokmaster’s technical team is fully focused on the Revel Ridge Project, but good opportunities in the surrounding area are well worth the extra effort that the team gave.”

“Major mining companies like a defined resource, but they also like area plays with large blue-sky potential, Rokmaster gives both.

“The Revel North Properties are in a much earlier stage of development when compared to the Revel Ridge Project and these initial results are highly encouraging.

“At Rokmaster, we understand that significant mineralized systems are not stumbled upon. Rather, hard work fused with a geologist’s knowledge and a prospector’s perseverance is the formula to discover and develop deposits.

“The Revel Ridge Project is already excellent and improving with each phase of work that Rokmaster completes. As one of British Columbia’s largest undeveloped gold deposits, it is an attractive asset with a relatively low impact development plan.

“The Revel North Properties serve to add value in an extremely under-explored district by highlighting that there remains much more mineralization to be discovered in the neighborhood of the Revel Ridge Project.

“Additional work to further advance the Revel North Properties will commence in the spring of 2023 using the first-rate Revel Ridge Project as a base.”

Mining Review 4th December 2022

Mining Review 4th December 2022

London mining week wasn't as busy as previous years and there wasn't a 'buzz' this year, but companies still came.

American Creek, Calidus Resources, and Rokmaster Resources made news this week.

Mines and Money 2022 – The magnificent Business Design Centre, at Islington.

Mining Review 4th December 2022

London mining week wasn't as busy as previous years and there wasn't a 'buzz' this year, but companies still come.

The annual Mines and Money show at Islington was sparsely attended compared to previous years, but companies still fly in from Australia and Canada to participate. Some have been in Europe for three weeks attending various conferences in Frankfurt, Zurich, and Geneva.

Companies on our watchlist in the news

American Creek, Calidus Resources, and Rokmaster Resources made news this week.

Rokmaster Resources Strong

Drill Intercept

Rokmaster Resources (TSX.V: RKR)

Announced a strong intersection of the Revel Ridge Main Zone by drillhole RR22-102a at the Revel Ridge Project.

Rokmaster Resources Revel Ridge Plan –

Rokmaster Resources (RKR.V): intersects 8.84 g/t AuEq over 4.20 m on northwestern extension of Revel Ridge Main Zone

VANCOUVER, BC, Nov. 28, 2022 /CNW/ – **Rokmaster Resources Corp.** (TSX.V: RKR) (OTCQB: RKMSF) (FSE: 1RR1) (“Rokmaster” or “the Company”) is pleased to announce a strong intersection of the Revel Ridge Main Zone (“RRMZ”) by drillhole RR22-102a at the Revel Ridge Project (“Revel Ridge” or “the Project”).

Drillhole RR22-102a was wedged to completion around the core barrel which broke due to equipment wear at 222.5 metres. The primary drillhole (RR22-102) intersected strong sphalerite-galena mineralization in a silicified limestone between 206.90 m and 211.50 m which represents the Yellowjacket Zone (“RRYZ”). Notably, this intersection occurs 65 m from RR21-50, the nearest drillhole hosting RRYZ mineralization. The RRYZ was encountered a second time in the wedge hole (RR22-102a) which is tabulated below.

The Main Zone (“RRMZ”) is located at the base of a thick carbonate unit at 287.3 m. Similar to drillhole RR22-101 (see [Press Release dated Sept. 26, 2022](#)), the RRMZ in

RR22-102a is primarily developed in a footwall quartzite package. This favorable carbonate-quartzite contact, which supports metre-scale massive sulphide bands in the RRMZ, may be laterally extensive with a distance of 95 metres between RR22-101 and RR22-102a.

John Mirko, Rokmaster Resources President and CEO, commented

“Drillhole RR22-102a bolsters the strength of the RRMZ and the Yellowjacket Zone in the northwest extension and meets the primary goal of the summer 2022 drill campaign. Rokmaster has located a favourable geological setting hosting wide intersections of RRMZ that is proving to be expansive.

“Work is progressing well on the update to the PEA that will be incorporating both the 2021 mineral resource estimate and the recent metallurgical break-through that demonstrably improves gold recoveries.”

“The data from these drillholes will be combined with the Spring 2022 drill program and all of the historical drill data to update the mineral resource estimation in 2023.

Rokmaster extends Main Zone 925 m to the southeast and 290 m to the northwest at Revel Ridge

September 26, 2022

[Download PDF](#)

(Vancouver, September 26, 2022 – Rokmaster Resources Corp. (TSXV: RKR) (OTCQB: RKMSF) (FSE: 1RR1) (“Rokmaster” or “the Company”) is pleased to announce the successful extension of the Revel Ridge Main Zone (“RRMZ”) a further 925 m to the southeast and 290 m to the northwest, in addition to initial assay results of the ongoing summer 2022 diamond drill program at the Revel Ridge Project (“Revel Ridge” or “the Project”).

John Mirko, President and CEO commented,

“To be consistently hitting good grade intersections on 120 metre step-outs is significant in any deposit class.

“After almost two years of near continuous drilling totalling 40,835 metres in 105 broadly spaced drill holes, it is astounding that we have yet to define the limits of the RRMZ.

“We are excited by the successful intersection of the RRMZ 925 m to the southeast, and 290 m to the northwest, further expanding our potential mineralized sections.

“The drill data suggests the full potential Revel Ridge remains to be tested, waiting only for that next series of drill holes.

“Together with the outstanding efforts of our metallurgical teams in obtaining 96.8% gold recoveries from Revel Ridge ores (see Press Release dated September 7, 2022), we have lots to look forward to.

“In 2023, we plan to update our mineral resource estimate with the drill hole data from our ongoing summer program and spring 2022 drill programs.

“The Project is already British Columbia’s largest

undeveloped high-grade underground gold deposit situated proximal to ideal infrastructure.

“We will continue our efforts and achievements of constantly improving the many dynamics on the pathway towards production.”

Rokmaster Confirms 96.8% Gold Recovery

[Rokmaster Resources \(TSX.V: RKR\)](#)

Announced the receipt of independent metallurgy reports on the recently completed flowsheet development test program on samples from the Revel Ridge Project.

On average, 98.3 percent of the feed gold was recovered to the

bulk rougher concentrate and following regrind and sequential flotation, gold recovery to the lead and zinc concentrates averaged 21.1 and 3.6 percent.

Review by Metso Outotec Confirms 96.8% Overall Gold Recovery at Revel Ridge

September 7, 2022

[Download PDF](#)

(Vancouver, September 7, 2022 – Rokmaster Resources Corp. (TSXV: RKR) (OTCQB: RKMSF) (FSE: 1RR1) (“Rokmaster” or “the Company”) is pleased to announce the receipt of independent metallurgy reports on the recently completed flowsheet development test program on samples from the Revel Ridge Project from Base Metallurgical Laboratories Ltd. (“BaseMet”) and SGS Canada Inc. (“SGS”), and a program review report from Metso Outotec Corp.

As emphasized in Figure 1 – Overall Optimized Flowsheet and the [BaseMet Metallurgical Testing Report](#):

On average, 98.3 percent of the feed gold was recovered to the bulk rougher concentrate and following regrind and sequential flotation, gold recovery to the lead and zinc concentrates averaged 21.1 and 3.6 percent. Following leaching of the P0X

residue, performed on the zinc final tail, an additional 72.2 percent gold was recovered for a total average gold recovery of 96.8 percent.

Jan Van Niekerk, Director, Gold Process Solutions at Metso Outotec stated,

“Metso Outotec’s [Technical Review of 2022 Revel Ridge P0X Test Work](#) has indicated that the work has produced a good set of technically competent results and that high sulphide oxidation and subsequent gold dissolution extents were attained during the test work program.

“The tests were conducted to appropriate standards, and integrity of results lends itself to be used in the design of an industrial P0X circuit. We have enjoyed working with Rokmaster and Canenco and look forward to strengthening this relationship as they move forward on the path to production.”

Rokmaster Resources Private Placement

Rokmaster Resources (TSX.V: RKR)

Announced a non-brokered private placement financing for a total of up to \$1,250,000 involving the sale of flow-through units and non-flow-through units.

Rokmaster Resources	TSX.V: RKR
Stage	Exploration
Metals	Polymetallic
Market cap	C\$16 m @ 12.5c
location	British Columbia, Canada

.

Rokmaster Resources Announce a Non brokered Private Placement

VANCOUVER, BC, Aug. 12, 2022 /CNW/ – **Rokmaster Resources Corp.** (TSX: **RKR**) (OTCQB: RKMSF) (FSE: 1RR1) ("**Rokmaster**" or the "**Company**") is pleased to announce a non-brokered private placement financing for a total of up to \$1,250,000 (the "**Private Placement**") involving the sale of flow-through units (the "**FT Units**") and non-flow-through units (the "**NFT Units**").

The flow-through funding will consist of up to 3,076,924 FT Units, priced at \$0.13 each for gross proceeds of up to \$400,000. Each FT Unit will consist of one flow-through common share (the "FT Share") plus one-half (1/2) non-transferable share purchase warrant (the "FT Warrant") to purchase one non-flow-through common share of the Company (a "Warrant Share") at \$0.25 per Warrant Share for a period of one year. The FT Warrants are subject to an accelerated expiry date, at the Company's option, which comes into effect when the trading price on the TSX Venture Exchange (the "Exchange") of the Company's common shares closes at or above \$0.30 per share during any 10 consecutive trading day period commencing four months plus one day after the date of issuance.

Additionally, the **non-flow-through funding** will consist of up to 7,083,334 NFT Units, priced at \$0.12 each for gross proceeds of up to \$850,000. Each NFT Unit will consist of one common share plus one non-transferable share purchase warrant (the "NFT Warrant") to purchase a Warrant Share at \$0.20 for a period of one year. The NFT Warrants are subject to an accelerated expiry date, at the Company's option, which comes

into effect when the trading price on the TSX Venture Exchange (the “Exchange”) of the Company’s common shares closes at or above \$0.25 per share during any 10 consecutive trading day period commencing four months plus one day after the date of issuance.

If the Company decides to accelerate the expiry date of the FT Warrants and/or NFT Warrants, the Company will give an expiry acceleration notice by issuing a press release (the “**Notice**”) announcing the acceleration and in such case, the expiry date shall be deemed to be the 30th calendar day following the date of issuance of the press release.

The FT Shares will qualify as “flow-through shares” (within the meaning of subsection 66(15) of the *Income Tax Act* (Canada) (the “*Tax Act*”). The gross proceeds raised from the sale of the FT Share component of the FT Units will be used by Rokmaster to incur “Canadian exploration expenses” (within the meaning of the *Tax Act*). Rokmaster will use funds raised from the sale of the NFT Units on non-flow-through eligible project expenses as well as for working capital purposes.

Certain directors, officers, and insiders of the Company may acquire securities under the Private Placement, which participation would be considered to be a “related party transaction” as defined under Multilateral Instrument 61-101 (“MI 61-101”). Such participation is expected to be exempt from the formal valuation and minority shareholder approval requirements of MI 61-101.

Rokmaster Resources Revel Ridge Plan – (Figure 1)

Rokmaster Commences Drilling of Surface Targets at Revel Ridge

August 4, 2022

[The full news release can be read here](#)

(Vancouver, August 04, 2022– Rokmaster Resources Corp. (TSX.V: RKR) (OTCQB: RKMSF) (FSE: 1RR1) (“Rokmaster” or the “Company”) is pleased to announce commencement of the surface diamond drill program at its Revel Ridge Project (“Revel Ridge” or the “Project”).

The current drill program is primarily directed to efficiently test the Revel Ridge Main Zone (“RRMZ”) northwest of the 830 Portal ([Figure 1 – Plan map](#)) where 2021 surface drilling indicates that there is strong continuity to the RRMZ approximately 515 metres northwest of the 830 Portal ([Figure 2 – Longitudinal Section](#)).

Drilling will additionally test the Zinc Creek Showing, which occurs approximately 920 m to the southeast of the southernmost 1991 surface drill holes 91-73 and 91-74.

Rock samples collected in 2021 from the massive sulphide portion of the Zinc Creek Showing assayed up to 7.20 g/t Au, 121.0 g/t Ag, 6.55 % Pb, and 12.99 % Zn.

This style of mineralization is highly characteristic of the RRMZ and is located on strike at a significant distance from previous drilling. The drill program will total approximately 5,000 metres and is designed to expand the volume of the RRMZ as defined in the updated NI 43-101 Mineral Resource Estimate filed on SEDAR on January 17, 2022:

- Measured & Indicated (M&I): 1.36 million gold equivalent (“AuEq”) ounces contained within 6.73 million tonnes

with an average grade of 6.27 g/t AuEq.*

- Inferred (Inf): 1.22 million AuEq ounces contained within 6.00 million tonnes at an average grade of 6.33 g/t AuEq.

The full assay results from the spring 2022 drill program are expected to be received by the Company in the coming weeks and will be published shortly after.

John Mirko, President and CEO of Rokmaster Resources stated:

“The entire Rokmaster team is excited to be back at Revel Ridge for the surface drill program. We have multiple targets to test with drilling, geological mapping, prospecting, and geochemistry within Revel Ridge Project and our surrounding Revelstoke properties.

“The ongoing drill program will principally test the RRMZ at depth to the northwest with broad, approximately 100 m step-outs. These large drill hole step-outs will further test the remarkable continuity and homogeneity of the mineralization in this area.

“The results of this program will be included in the next resource update, which is planned to be complete in 2023.

“We are also eagerly anticipating the results of the updated PEA, which is scheduled to be complete in the fourth quarter of 2022.

“This update will apply the 2021 resource estimate (Rokmaster news release, December 01, 2021), in addition to recent metallurgical advancements to the already positive 2020 PEA (Rokmaster news release, December 08, 2020)”.

Mining Review Sunday Update 28th May 2022

City Investors Circle update on the mining scene, with commodity prices on the whole still falling due to a high dollar, and US interest rate hike expectations. I firmly

believe FED chair Powell will have to cease rate hikes sooner rather than later.

Companies in the news this week included **Banyan Gold**, **Calidus Resources**, **Karora Resources**, **Rokmaster Resources**, and **Tinka Resources**.

Recent news from companies on our watchlists

[Calidus Resources Announced a Maiden Lithium Drill at Spear Hill](#)

[Karora Resources 2nd Decline on Track and Cost](#)

[Tinka Resources Secure a C\\$11m Strategic Funding](#)

[Recent London Mining Conferences a little flat](#)

[Banyan Gold Announced a 4 million Oz Gold Resource](#)

[Rokmaster Resources Drills 34.75 M Wide Zinc-Lead](#)

Rokmaster Drills 34.75 M Wide Zinc-Lead Zone Hosting Significant Silver at Duncan Lake Zinc Project.

May 17, 2022

[Download PDF](#)

(Vancouver, May 17, 2022)– Rokmaster Resources Corp. (TSX.V: RKR) (OTCQB: RKMSF) (FSE: 1RR1) (“Rokmaster” or the “Company”) is pleased to announce initial assay results from diamond drilling on the Duncan Lake Zinc Project.

An initial drilling campaign was completed in early April 2022 with the purpose of confirming historical drill intersections as well as providing valuable geological information.

Three drillholes totalling 681.2 metres were wedged off historical Cominco Ltd.'s (now "Teck Resources Limited" or "Teck") drillhole 97-12, located 2.0 kilometres northwest of Teck's Duncan Mine Portal ([Figure 1](#)). Partial assay results for one of the three drillholes, D22-02, are presented in this news release. Assay results for drillholes D22-01, D22-03, and parts of D22-02 remain in process.

Rokmaster Resources management comments

"The trend of increasing silver grades to the north of the Duncan Lake mine suggested by Rokmaster ([News Release Dec. 20, 2021](#)) is supported by the enhanced silver values obtained from DDH D22-02.

"The data suggests that carbonate hosted lead zinc occurrences in the Duncan Lake area offers shareholders the opportunity to pursue both a strong zinc-lead target as well as a promising silver enhanced target.

"Rokmaster's Duncan Lake exploration programs are undertaken in an area with excellent access, near Teck's smelter, with the right metallogenic 'address', and on a claim package large enough to reflect the scale of this impressive mineralizing system."

John Mirko, President and CEO of Rokmaster Resources

Rokmaster Announces Initial

Assay Results from its 2021/2022 Metallurgical Drilling Program at Revel Ridge

(Vancouver, January 27, 2022– **Rokmaster Resources Corp. (TSXV: RKR)** (OTCQB: RKMSF) (FSE: 1RR1) (“Rokmaster” or the “Company”) is pleased to announce the results of the first four drill holes of the ongoing 3,000 m metallurgical drilling program at the Revel Ridge Project (“Revel Ridge”), located 35 km northeast of Revelstoke, B.C.

Revel Ridge hosts a gold rich, polymetallic orogenic gold deposit, and is one of the largest undeveloped deposits of this type in the Western Cordillera.

Rationale for 2021 and 2022 Metallurgical Drill Program.

The ongoing metallurgical drill program utilizes HQ¹core. Rokmaster’s previous drilling in the 2020 and 2021 underground and surface drilling programs used industry standard NQ core. The metallurgical sampling program is designed to obtain large volumes of mineralized drill core for metallurgical testing.

The larger diameter HQ core produces 62% more volume of material per unit length than NQ²core. In the current program, a second drillhole is wedged from the pilot hole, providing Rokmaster with a second mineralized rock volume, with

significantly less drilling.

Historically, the majority of the metallurgical studies initiated at Revel Ridge acquired metallurgical bulk samples from the 830 m underground drift.

The samples were representative of a few hundreds of metres of strike length of the Revel Ridge Main Zone, a gold rich polymetallic orogenic gold deposit, but only at the 830 m elevation level. Rokmaster's 2020 and 2021 exploration programs have demonstrated that:

- The mineralized deformation zone that hosts the Revel Ridge deposit is very large. It has excellent continuity over 1,200 vertical m and is known to persist over strike lengths exceeding 3,500 m.
- The nature of gold mineralization within this large mineralized system may have significant variations in mineralogy, including the potential evolution to a mineralized system with greater amounts of macroscale, visible gold (Rokmaster News Release, June 7, 2021).

Rokmaster's current metallurgical program entails drilling approximately 3,000 m of HQ core, in 14 drillholes. These drillholes will obtain metallurgical samples from the Yellowjacket, Main, Hanging Wall and Footwall mineralized zones.

The samples will be used to examine variations in metallurgical characteristics of higher elevation levels (up to 890 m), as well as lower elevations (down to 390 m) within the Revel Ridge mineralized zones.

The HQ drillholes in the current program will also obtain samples from over 700 m of strike length of this impressive mineralized system (Figure 1 Rokmaster Metallurgical Drill Hole – Longitudinal).

Analytical Results Metallurgical Drillholes. In addition to conducting metallurgical studies on HQ core samples, HQ drillholes are used to obtain confirmation assays from mineralized zones which may have had limited testing. The results from the first four drillholes in the metallurgical drill program are presented on Table 1. The initial results are significant as:

- All drillholes hit significant mineralized intervals of the Main (“RRMZ”), Yellowjacket (“RRYZ”) and Footwall (“RRFZ”) zones.
- All samples significantly exceed the cut-off grades and widths used for inclusion in the revised and updated mineral resource estimate “MRE” (Rokmaster News Release, January 17, 2022).
- Two of the metallurgical drillholes, RR21-80 and RR21-81 contain macroscale gold in sheeted quartz-iron carbonate veins identified in the Footwall Mineralized Zone.
- The up-dip extension of the Mineralized Zone in the area of the 830 drift has had very limited drilling. The strongly positive results of DDH RR21-82, drilled 60 m above the 830 adit, suggests significant potential exists in this large, and largely untested, target area.

Rokmaster Resources management comments

“Our current metallurgical drilling program is the first concerted effort in the long history of the Revel Ridge deposits to gain a systematic understanding of the metallurgical characteristics over large areas.

“Over the past four decades, metallurgical methods and techniques have experienced quantum steps in their ability to cost effectively deal with gold liberation in high sulphide auriferous gold deposits.

“Over the past 12 months, Rokmaster’s metallurgical team has already raised the benchmark in the process metallurgy of the Revel Ridge ores. We fully anticipate that the current metallurgical drilling program, and the results of these leading-edge metallurgical studies will conclusively demonstrate that cost effective metallurgical processes are attainable at Revel Ridge.

“Positive results to those studies will provide the final key to unlock the incredible mineral endowment of the Revel Ridge deposits.”

John Mirko, President & CEO of Rokmaster Resources

Rokmaster Resources Revel Ridge project

Rokmaster Updates Its

Advanced Stage Duncan Lake Zn-Pb-Ag Project

(Vancouver, Dec. 20, 2021— Rokmaster Resources Corp. (TSXV: RKR) (OTCQB: RKMSF) (FSE: 1RR1) (“Rokmaster” or the “Company”) is pleased to provide an update on the 2021 exploration activities and expanded claim package at its advanced stage Zinc-Lead-Silver deposit at Duncan Lake and on newly acquired ground on the “President Silver Trend”, both in southeastern British Columbia.

Regional Scale of Duncan Lake Zn-Pb Occurrences

Duncan Lake is one of a series of Zn-Pb-Ag carbonate hosted deposits which are associated with Cambrian age limestones forming the western boundary of a prolific metallogenic belt, the Kootenay Arc. Rokmaster’s Duncan Lake ~15 km long claim package host numerous Pb-Zn-Ag occurrences, including the Duncan No. 1 to 4 mineral occurrences and most significantly the northerly down plunge extensions of the No. 7 and 8 Zones of Teck Resources’ Duncan Mine Prospect.

All of these Pb-Zn-Ag occurrences follow the permissive Badshot limestone ([Figure 1](#)). The contact of the Badshot limestone may form mineralized domains, with hundreds of metres to kilometre-scale strike lengths, exemplified by the No.1 to No.8 occurrences. Prospecting samples, and the results of extensive soil geochemical surveys highlight the positions of strongest Zn-Pb-Ag mineralized zones within the project’s 10 km long Badshot trend.

The Duncan Mine Prospect

The adjacent Duncan Mine Prospect was the focus of an underground development program by Cominco in 1959-1960 followed by substantial underground and surface diamond drilling which continued through to 1997.

The Duncan Mine Prospect (Duncan No. 5 – 8 zones) contains a historical resource of 3.9 million tonnes grading 3.2% Zn and 3.1% Pb (Lane, 2018)²³. Work undertaken by Cominco geologists (1989 to 1997) pursued the No. 7 and 8 mineralized zones onto what is now Rokmaster ground.

These drill holes were collared on very broad 300 – 350 m centres, [Figure 2](#). The results of this program suggested that the grade of Zn-Pb-Ag mineralization increases to the northwest along the shallow plunge line of the Duncan anticline.

Rokmaster's Duncan Lake Zinc Project has:

1. Room to discover mineralization, at the kilometre scale, in the direction of increasing Ag-Zn-Pb trends.
2. Room to test the permissive anticlinal closure, on a kilometre scale on both the western and eastern limbs of the Duncan Anticline within the often-fertile Badshot limestone.

Rokmaster and Acquisition of the

President Showing – President Silver Trend.

Rokmaster has recently acquired a 123-ha claim package which overlies the Two Brothers and President Crown grants. These claims provide an additional 1800 m of strike length on northwestern continuation of the Duncan Lake Zn-Pb-Ag trend.

The additional claims fall along the northwest side of Duncan Lake and are contiguous with Rokmaster's adjacent Duncan claims.

At the President Silver Trend, a strong, deep yellow-orange gossanous alteration and deformation zone follows the northwest plunging trace of the Duncan Anticline. The occurrence was first tested by a series of three short adits, totalling 210 m where in 1893 the operators focus was on very high-grade silver-lead mineralized zones.

The occurrences are characterized by much higher silver grades, with 1980 trench samples cutting 531 g/t Ag over 1.0 m, [Figure 4](#). The data suggests that the mineralogical zonation and increasing Ag-Pb-Zn tenor, first noted near the Duncan Mine, continues to the northwest across Duncan Lake. The occurrence was targeted in 1976 by a single BQ drillhole (44.7 m) which failed to intersect bedrock.

.

Northwest zonation in the direction of increasing silver is suggested by:

1. Cominco's drilling on the northwesterly continuation of the No. 8 zone at Duncan Lake, now on Rokmaster ground, where 74 drill hole samples contained greater than 0.5 g/t Ag, averaged 1.7 g/t Ag.
2. Drilling by Cominco in 1997 **did not assay for silver**. Resampling of 1997 core demonstrated that 5 of 21

samples returned silver grades >3.5 ppm Ag (Lane, 20184). Lane reported that “silver may be an important contributor to certain mineralized intervals”.

3. On the President Silver Trend, on the northwest side of Duncan Lake, the data of MacGregor (1981)⁵ lists twenty rock samples taken from three trenches that carry an average silver grade of 42.1 g/t Ag. The progressive increase in silver content occurs over a strike length of 5.5 km, on ground that is largely controlled by Rokmaster

Rokmaster Resources management comments

“Rokmaster is in the enviable position of controlling a trinity of outstanding mineral occurrences including: 1) the Revel Ridge orogenic gold deposit; 2) Big Copper, a highly prospective sediment hosted copper-silver occurrence; and 3) Duncan Lake, an advanced stage carbonate hosted Zn-Pb-Ag deposit.

“Any of these could be company builders and each should contribute significantly to shareholder value and growth.

“Duncan Lake represents a strong link in the multi-commodity occurrence chain which Rokmaster has forged over several years of astute acquisition, exploration and project enhancement.

“Duncan Lake has been recognized for decades as being one of the premier undeveloped Zn-Pb-Ag deposits in the Kootenay Arc. With the acquisition of ground overlying the President Silver Trend, the full potential of the Duncan Lake deposits may yet be realized.

“Rokmaster holds a valid permit (MX-5-802) to undertake surface drilling on its Duncan Lake project and Rokmaster anticipates that that permit will be utilized at a time most advantageous to its shareholders.”

John Mirko, President and CEO of Rokmaster Resources
