Lahontan Drills 9.9m at 2.40 g/t Au and 50.7 g/t Ag in Santa Fe Mine Stockpile

Lahontan Gold (TSX.V: LG)

Announced the first drill results from its 2026 Sonic core drilling program at the Santa Fe Mine Project.

The initial results below are from a historic "low-grade" stockpile located adjacent to Heap Leach Pad two at Santa Fe. The drilling confirms significant gold and silver mineralization within the stockpile.

.

LAHONTAN DRILLS 9.9m GRADING 2.40 g/t Au and 50.7 g/t Ag in SANTA FE MINE STOCKPILE

.

Toronto Ontario, July 23, 2026 – Lahontan Gold Corp. (TSXV:LG, OTCQB:LGCXF, FSE:Y2F) (the "Company" or "Lahontan") is pleased to announce the first drill results from its 2026 Sonic core drilling program at the Santa Fe Mine Project.

The Sonic drilling campaign is evaluating historic heap leach pads and stockpiles to define gold and silver resources that may be suitable for future reprocessing at substantially lower cost than mining and processing fresh rock.

The initial results below are from a historic "low-grade" stockpile located adjacent to Heap Leach Pad two at Santa Fe. The drilling confirms significant gold and silver mineralization within the stockpile and indicates grades substantially higher than anticipated based on the historic stockpile classification.

Notes: Au Eq equals Au (g/t) + ((Ag g/t/60)*0.70). Silver grade for calculating Au Eq is adjusted to consider historic metallurgical recovery as described in the Santa Fe Project Technical Report*.

All drill holes are vertical, true thickness of the intercepts are approximately 100% of the drilled interval. Numbers may not total precisely due to rounding.

The stockpiled material was mined from the Santa Fe open pit by the previous mine operator, Corona Gold, and was set aside for potential future processing. The stockpile abuts Heap Leach Pad two and is readily accessible. C

N-extractable gold assays range from 5% to 87% of the corresponding fire assay values, averaging more than 30%. These results suggest the stockpiled material is readily amenable to conventional heap leach processing.

Results from six additional Sonic drill holes completed on the "low-grade" stockpile are expected shortly.

Kimberly Ann, Founder, Chair, CEO, and President of Lahontan Gold Corp commented:

“The Sonic drilling campaign at Santa Fe is designed to define and verify the tonnage and grade of material remaining in the four historic heap pads at the mine.

“Approximately 16 million tonnes of material were processed on the heap leach pads, residual gold and silver contained within these historic heap leach pads represent a potentially valuable source of low-cost future feed.

“The “low-grade” stockpile adjacent to Heap Leach Pad two has long intrigued our team because it consists of readily accessible mined material that could be potentially crushed and heap leached at relatively low cost.

“The results from these first drill holes not only confirm the presence of gold and silver but also show that the grade of the stockpile is considerably higher than anticipated.

“The Sonic drilling program has now concluded, with nearly 100 drill holes completed across the four historic heap leach

pads. We look forward to reporting additional results as they become available."

Lahontan Santa Fe Mine Development and Exploration Update

Lahontan Gold (TSX.V: LG)

Provided an update on mine development and exploration activities at its flagship Santa Fe Mine Project located in mining friendly Nevada’s Walker Lane.

Highlights include an updated MRE expected within weeks, and a revised PEA targeted for completion by the end of August 2026.

LAHONTAN PROVIDES SANTA FE MINE DEVELOPMENT and EXPLORATION UPDATE

Toronto Ontario, June 30, 2026 – Lahontan Gold Corp. (TSXV:LG, OTCQB:LGCXF, FSE:Y2F) (the "Company" or "Lahontan") is pleased to provide an update on mine development and exploration activities at its flagship Santa Fe Mine Project located in mining friendly Nevada's Walker Lane.

Highlights:

- Updated MRE expected within weeks.
- Revised PEA targeted for completion by the end of August 2026.
- 87 drill holes (7,751 m) completed year-to-date.
- New Slab West discovery remains open in all directions.
- Historic heap leach pad drilling underway to evaluate

potential reprocessing

The mine permitting team continues to make timely progress on the waste rock geochemical characterization program and ground water modeling, part of the Nevada state mine permitting process.

The preparation of an updated Mineral Resource Estimate (“MRE”) for Santa Fe is nearly complete, a crucial step in developing an open pit mine plan for the restart of gold and silver production at the project.

With an updated MRE, the Company will also complete a revised Preliminary Economic Assessment (“PEA”), which will include detailed description of key mine infrastructure including heap leach pads, open pits, and locations for waste rock storage.

With the PEA in hand, the Company will be able to submit a Mine Plan of Operations (“MPOO”) to the Federal Bureau of Land Management (“BLM”).

Despite the fluid nature of Federal and State mine permitting, Lahontan remains on track for breaking ground at the Santa Fe Mine Project in 2027.

Kimberly Ann, Lahontan Gold Corp. Chair, CEO, President, and Founder commented:

“The pace of activity at Santa Fe continues to accelerate:

“We are advancing permitting activities, making new gold and silver discoveries, while evaluating the economic potential of reprocessing the historic heap leach pads, potentially producing very significant and low-cost recoverable ounces.

“Lahontan has completed 87 drill holes totaling 7,751 metres so far in 2026 with more to come.

“We remain on track to break ground in 2027:

“The Santa Fe Mine is a classic brownfields restart, leveraging existing infrastructure and technical knowledge allowing us to restart production at lower capital cost, on a shorter development timeline, and with a substantially lower execution risk than a comparable greenfield project, benefiting all stakeholders.”

Lahontan Reports Cyanide Recoveries Of 81% For Gold and 60% For Silver

Lahontan Gold Corp. (TSXV: LG)

Announced that analyses of pulp samples from the Company's 2025 reverse-circulation drilling program show high levels of cyanide extraction for gold and silver that corroborates and validates previous metallurgical testing at Lahontan's West Santa Fe project.

LAHONTAN REPORTS CYANIDE RECOVERIES OF 81% FOR GOLD AND 60% FOR SILVER AT WEST SANTA FE

Toronto Ontario, April 13, 2026 – Lahontan Gold Corp. (TSXV:LG, OTCQB:LGCXF, FSE:Y2F) (the "Company" or "Lahontan") is pleased to announce that analyses of pulp samples from the Company's 2025 reverse-circulation ("RC") drilling program show high levels of cyanide ("CN") extraction for gold and silver that corroborates and validates previous metallurgical testing at Lahontan's West Santa Fe project.

Highlights of the CN test program include:

• CN extractable gold averaged 81% compared to the original fire assay gold values for
individual pulp samples (please graph below). This is a very high CN extraction ratio and greater than the projected gold recovery reported in previous metallurgical testing for West Santa Fe (more below).
• CN extractable silver averaged 60% compared to the original ICP and fire assay analyses (please graph below). This is also a high CN extraction ratio, especially for silver, and is greater than the projected silver recovery reported in previous metallurgical testing.

Kimberly Ann, Lahontan Executive Chair, President, CEO, and Founder commented:

"The results of the CN extractable gold and silver analyses confirm our belief that precious metal mineralization at West Santa Fe is amenable to CN heap leach processing for gold and silver recovery.

"Combined with the results of the 2025 RC drilling program, which replicated the gold and silver results from historic drilling, we are checking all the boxes: Exploration will now continue at West Santa Fe, seeking to expand the footprint of the precious metal system in anticipation of the preparation

of a Mineral Resource Estimate ("MRE") later this year."
