Barton Gold Begins Scoping Study for High-Grade Underground Mine Feed

Barton Gold (ASX: BGD)

Announced the start of an underground feed Scoping Study at its South Australian Challenger Gold Project.

A scoping level review of potential development options for Challenger's high-grade underground mine has been expedited following last week's JORC (2012) MRE update.

Barton Gold Study Begins for High-Grade Underground Mine Feed, Significant potential indicated for further JORC Resources growth

Barton Gold Holdings Limited (ASX:BGD, OTC:BGDFF, FRA:BGD3) (Barton or Company) is pleased to announce the start of an underground feed Scoping Study at its South Australian Challenger Gold Project (Challenger).

A scoping level review of potential development options for Challenger's high-grade underground mine has been expedited following last week's JORC (2012) Mineral Resources Estimate (MRE) update, where the underground surprised to the upside with Resources more than doubling to 230koz @ 3.65 g/t Au.

Challenger's underground mine produced over 1 million oz of gold during 2002 to 2018, benefits from significant existing development including dual declines, and is hosted in very stable ground.

Almost all Challenger underground Resources are located on, or adjacent to, existing serviceable development.

HIGHLIGHTS

• Scoping Study for underground mine feed to adjacent Central Gawler Mill expedited following JORC Resources update more than doubling underground inventory to 230koz @ 3.65 g/t Au1
• Material grade improvements observed where mineralisation previously modelled as ‘open pit’ reclassified to ‘underground’ with a view to more efficient / selective extraction methods
• Preliminary modelling also indicates potential to bring significant additional unclassified mineralisation into future JORC Resources or mine plan through further near-mine drilling
• Definitive Feasibility Study (DFS) underway to evaluate a potential CGM restart2

Barton Managing Director Alexander Scanlon commented:

“We were pleasantly surprised by our detailed remodelling of Challenger’s high-grade underground mineralisation.

“There are now 230koz gold grading 3.65 g/t Au located on or adjacent to existing development, including Resources which have improved in grade following reclassification from ‘open pit’ to ‘underground’ for more efficient extraction.

“Preliminary modelling indicates significant potential to convert additional high-value mineralisation through drilling.

“Challenger produced over 1 million gold ounces from 2002 to 2018, and the history of this asset appears to be far from complete.

“The existing underground infrastructure offers low-cost access to high-grade ounces, while our fully permitted Central Gawler Mill offers valuable infrastructure leverage to realise their value.

“We look forward to the results of this study, and to considering their implications for the optimal future pathway of our Challenger assets.”

Barton Gold 2026 Annual Report Issued

Barton Gold (ASX: BGD)

The company published its Annual Report confirming rapid progress is being made on the path to gold production commercialisation.

Barton Gold 2026 Annual Report – Continued rapid progress on path to commercialisation

Alex Scanlon issued the following post to shareholders

HIGHLIGHTS

- **Acceleration of commercialisation activities across entire gold portfolio, with exciting new Tolmer silver discovery emerging in parallel**
- **Numerous drilling programs include major 58,000m Resource upgrade program at Tunkillia to support Au and Ag MRE updates, a PFS and MLA**
- **Growth of global JORC Resource inventory to 2.25Moz Au and 3.1Moz Ag, with multiple further updates pending and more follow-up drilling planned**
- **Addition of Barton Gold (ASX:BGD) to S&P Global ASX All Ordinaries Index**

Dear Investors & Colleagues,

We are pleased to share our 2026 Annual Report for the year ended 30 June 2026.

2026 has been Barton's fifth full year as a publicly listed company, and one which has marked continuing rapid progress as we transition from an 'explorer' building our Resource base to a 'developer' moving to commercialise and enhance our platform and portfolio of assets.

Among others, notable 2026 achievements include:

Exploration

1) execution of several drilling programs including a major 58,000m upgrade drilling program at Tunkillia to support gold and silver MRE updates, a PFS and MLA;

2) rapid advancement of Tunkillia's PFS and other work programs, to support a robust project investment proposition and MLA, both targeting H1 CY 2027;

3) growth of Challenger's MRE to 313koz Au, the further discovery of new mineralisation grading up to 170 g/t Au on its main open pit and confirmation that the CGM is suitable for recommissioning, all as the basis for an ongoing DFS; and

4) material extensions at our 'Tolmer' silver discovery, where high-grade silver and gold zones emerged in parallel with assays up to 17,600 g/t Ag and 83 g/t Au;

Corporate

5) completion of two institutional placements to leading global precious metals investment funds totalling $40.9 million, each priced at modest discounts and with minimal placement costs, materially enhancing the quality of Barton's shareholder register, and funding several key value-add milestones during the 2027 FY;

6) completion of the acquisition of all rights to Wudinna, bringing a further 279koz Au MRE and a potential source of valuable blending feed to our development platform; and

7) Barton's addition to the S&P Global ASX 'All Ordinaries' Index during September 2025.

These accomplishments prepare Barton for an exciting year ahead as we pursue commercialisation of the Company's assets and the successful transition from 'developer' to 'producer'. During the coming 6 – 9 months, we are targeting (among others):

- further drilling of our 'core' and 'regional' growth assets;
- the publication of multiple gold and silver JORC Resources upgrades;
- the publication of two feasibility studies for Challenger and Tunkillia; and
- further analysis of our increasingly exciting Tolmer silver discovery.

These initiatives are fully funded, with $32 million cash on hand as at 30 June 2026. Our team also continue evaluating other potential value-add initiatives, in keeping with our track record of working to generate new options for the Company.

We thank our many valued stakeholders for an exceptional year, including the South Australian State Government, our Native Title partners, the local communities in which we operate, and, of course, our growing base of international shareholders, large and small.

The path ahead for Barton Gold is exciting, and we are deeply honoured to have your support. For those local to Adelaide, or able to travel, we hope that you will be able to join us for our upcoming Annual General Meeting on 27 November 2026.

A copy of the 2026 Annual Report can be found on the ASX platform and the Company's website here.

Regards,
Alexander Scanlon
Managing Director & CEO

Barton Gold Tunkillia assays confirm new high-grade mineralised zone

Barton Gold (ASX: BGD)

Announced further notable assays from ‘Phase 2’ upgrade drilling at its South Australian Tunkillia Gold Project.

Further broad, shallow high-grade infill assays from Tunkillia’s ‘Starter Pits’ appear to reinforce the theory for new, shallow high-grade mineralisation.

Tunkillia drilling – Credits Barton Gold

	Barton Gold	ASX: BGD

	Metals	Gold
	Market Cap	A$279 Million @A$1.03
	Location	South Australia
	Website	www.bartongold.com.au

Barton Gold Tunkillia assays confirm new high-grade mineralised zone

Barton Gold Holdings Limited (ASX:BGD, OTC:BGDFF, FRA:BGD3) (Barton or Company) is pleased to announce further notable

assays from ‘Phase 2’ upgrade drilling at its South Australian Tunkillia Gold Project (Tunkillia).

Further broad, shallow high-grade infill assays from Tunkillia’s ‘Starter Pits’ appear to reinforce the theory for new, shallow high-grade mineralisation targeted by Barton’s ‘Phase 2’ drilling expansion.

This could potentially increase the grade profile of this mineralisation for Tunkillia’s upcoming PFS, with material implications for the project’s already very robust modelled economic returns.

Barton is still waiting for a final batch of ‘Phase 2’ drilling assays. Following receipt, Barton will then prepare comprehensive and representative cross sections for Tunkillia, and progress to gold and silver MRE updates.

HIGHLIGHTS

• Latest assays from recent 39,000m ‘Phase 2’ reverse circulation (RC) Resource upgrade drilling further confirm new high-grade mineralisation within shallow area of ‘Starter Pits’, including:
Hole ID Interval Including:
TKB0667 21m @ 3.62 g/t Au from 57m depth 6m @ 7.30 g/t Au from 63m depth
TKB0668 50m @ 1.45 g/t Au from 62m depth 3m @ 5.32 g/t Au from 65m depth
TKB0674 4m @ 3.80 g/t Au from 61m depth, and
11m @ 8.73 g/t Au from 68m depth
1m @ 8.90 g/t Au from 61m depth
2m @ 36.9 g/t Au from 71m depth
• Final assays pending, followed by updated gold and silver JORC Mineral Resource Estimates (MRE)

Barton MD Director Alexander Scanlon Commented,

“Tunkillia’s infill drilling assays continue to surprise to the upside, with the latest results providing further support for a new ‘bonus’ zone of high-grade mineralisation sitting on top of that already modelled in the high-value ‘Starter Pits’.

“We are advancing Tunkillia through pre-development programs as quickly as possible, following recent Government approval of its environmental Scoping Report as a first step in its Mining Lease application processes.

“We look forward to completing gold and silver Mineral Resources updates, our PFS, and a Mining Lease application in the near future.”

Barton Gold Tunkillia

drilling confirms new high-grade mineralisation

Barton Gold (ASX: BGD)

Announced further assays from ‘Phase 2’ upgrade drilling at its South Australian Tunkillia Gold Project.

These include broad, high-grade assays in shallow areas of Tunkillia’s ‘Starter Pits’, supporting potential to extend total Tunkillia mineralisation and increase JORC Mineral Resources.

Tunkillia drilling – Credits Barton Gold

	Barton Gold	ASX: BGD
	Stage	Production, development

Barton Gold Tunkillia infill drilling confirms new high-grade mineralisation within shallow zone of existing high-value ‘Starter Pit’ outlines

Gold & silver Resource upgrades pending, PFS on track for Q1 CY27

Barton Gold Holdings Limited (ASX:BGD, OTC:BGDFF, FRA:BGD3) (Barton or Company) is pleased to announce further assays from 'Phase 2' upgrade drilling at its South Australian Tunkillia Gold Project (Tunkillia).

These include broad, high-grade assays in shallow areas of Tunkillia's 'Starter Pits', supporting potential to extend total Tunkillia mineralisation, increase JORC Mineral Resources within existing May 2025 OSS optimised pit outlines, and increase the grade profile of this mineralisation in Tunkillia's upcoming PFS.

A final batch of 'Phase 2' Resource upgrade drilling assays is expected to be reported shortly. After all results have been received Barton will then prepare comprehensive and representative cross sections of assay results.

HIGHLIGHTS

• Latest assays from 39,000m 'Phase 2' reverse circulation (RC) Resource upgrade drilling yield significant high-grade mineralisation in shallow area of 'Starter Pits', including:
Hole ID Interval Including:
TKB0639 6m @ 6.61 g/t Au from 70m depth 1m @ 32.4 g/t Au from 73m depth
TKB0642 6m @ 2.95 g/t Au from 63m depth 2m @ 6.20 g/t Au from 63m depth
TKB0651 11m @ 2.87 g/t Au from 79m depth 1m @ 10.6 g/t Au from 88m depth

• Final 'Phase 2' assays pending, with JORC Mineral Resource updates for gold and silver to follow

Barton Managing Director Alexander Scanlon said:

“Tunkillia’s ‘Phase 2’ drilling was expanded after early analysis of infill assays identified a potential new domain of high-grade mineralisation within its ‘Starter Pit’ outlines.

“These ‘S1’ and ‘S2’ pits drive Tunkillia’s robust economics, and are modelled to yield a A$1.8bn operating profit during the first 2.5 years alone at current gold and silver prices.

“Given that the average grade driving these economics in the ‘Starter Pits’ is 1.05 g/t Au, the new assays are exceptional. Such mineralisation could materially boost Tunkillia’s already remarkable early operating economics.

“We are very much looking forward to the balance of outstanding assay results, the majority of which are targeting this potential.

“We expect to report one final batch of assays shortly, and look forward to sharing Mineral Resources upgrades for both gold and silver in the coming months before completing our PFS and submitting our Mining Lease application.”

Barton Gold to Expand Tunkillia Phase 2 Upgrade Drilling

Barton Gold (ASX: BGD)

Announced the expansion of ‘Phase 2’ upgrade drilling at its South Australian Tunkillia Gold Project.

Interim analysis indicates growth & grade upside potential.

Credits Barton Gold Limited.

	Barton Gold	ASX: BGD
	Stage	Production, development
	Metals	Gold
	Market Cap	A$219 Million @A$0.92
	Location	South Australia

	Website	**www.bartongold.com.au**

Barton Gold Announces the Expansion of Tunkillia Phase 2 Upgrade Drilling

Barton Gold Holdings Limited (ASX:BGD, OTCQB:BGDFF, FRA:BGD3) (Barton or Company) is pleased to announce the expansion of 'Phase 2' upgrade drilling at its South Australian Tunkillia Gold Project (Tunkillia).

HIGHLIGHTS

• 18,900m 'Phase 1' upgrade drilling completed November 2025, ~30,000m, 'Phase 2' program ongoing
• Analysis of assays to-date indicates upside potential in high value 'Starter' pit areas, potential extensions of main open pit, and higher-grade extensions of 'Area 51' open pit mineralisation
• Reverse circulation (RC) component of 'Phase 2' drilling program now expanded to ~40,000m

Tunkillia's May 2025 Optimised Scoping Study (OSS) outlined a compelling development project, where:
• Annual production: ~120,000oz gold and ~250,000oz silver
• Total LoM operating cash: ~A$2.7 billion (unlevered, pre-tax)
• Net Present Value (NPV7.5%): ~A$1.4 billion (unlevered, pre-tax)

• Internal Rate of Return (IRR): ~73.2% (unlevered, pre-tax); and
• Payback period: ~0.8 years (unlevered, pre-tax)
Notably, within the project the S1 and S2 pits are modelled to produce 365,000oz gold, 923,000oz silver and $1.3bn operating free cash during the first ~27 months alone (assuming A$5,000/oz gold and A$50/oz silver).

At current prices, these would be modelled to produce approximately $1.75bn in this time. Based upon these results, Barton expedited upgrade drilling programs to support JORC Resource upgrades and PFS analyses.

Interim analysis of 'Phase 1' and 'Phase 2' RC drilling assays published to-date has identified potential to extend total Tunkillia mineralisation, increase JORC Mineral Resources within the May 2025 OSS optimised pit outlines, and increase the grade profile and classification of 'Starter' pit mineralisation.

Barton has therefore added ~10,500m to the ongoing 'Phase 2' RC drilling program. All other work programs remain on track for target completion of a Pre-feasibility Study (PFS) before the end of calendar year 2026.

PFS results will then inform a Mining Lease application and project finance discussions during calendar year 2027.

Commenting on the expansion of Tunkillia drilling, Barton Managing Director Alexander Scanlon said:

"Tunkillia's OSS demonstrated its financial and capital

leverage, with robust economics driven by higher-grade 'Starter Pits' modelled to generate A$1.75bn operating profit during the first 2.5 years at current gold and silver prices.

"With recent 'Phase 1' upgrade drilling confirming the mineralisation behind these economics, and ongoing 'Phase 2' drilling identifying new extensions and higher grade mineralisation, we are excited to expand drilling with the objective to potentially increase both the quantum and grade of Resources within Tunkillia's optimised open pit outlines.

"This could materially enhance Tunkillia's already robust economics by adding new gold and silver ounces within the existing pit outlines, further reducing early cash costs per ounce, and boosting its significant early cash flow profile."

Barton Gold's High-Grade Assays Indicate Growth for Tunkillia's Area 51

Barton Gold (ASX: BGD)

Announced the first round of assays received from 'Phase 2'

upgrade drilling at its South Australian Tunkillia Gold Project.

These come from within the currently modelled ‘Area 51’ optimised open pit.

Credits Barton Gold

	Barton Gold	ASX: BGD
	Stage	Production, development
	Metals	Gold
	Market Cap	A$219 Million @A$0.92
	Location	South Australia
	Website	www.bartongold.com.au

.

Barton Gold's High-Grade Assays Indicate Growth for Tunkillia's Area 51

North / south extensions indicated by highest-grade mineralisation

Barton Gold Holdings Limited (ASX:BGD, OTCQB:BGDFF, FRA:BGD3) (Barton or Company) is pleased to announce the first round of assays received from 'Phase 2' upgrade drilling at its South Australian Tunkillia Gold Project (Tunkillia).

These come from within the currently modelled 'Area 51' optimised open pit.

These assays include broad intersections which infill the currently modelled Area 51 mineralisation, with the highest-grade assays also indicating potential optimised open pit growth and further high-value extensions.

HIGHLIGHTS

• ~30,000m Tunkillia 'Phase 2' reverse circulation (RC) Resource upgrade drilling underway, after 'Phase 1' infilled highest value S1 and S2 pit areas (in the centre of Area 223) with high-grade intersections1
• First assays from ongoing 'Phase 2' upgrade drilling include highest-grade results to-date from Area 51 zone, indicating potential growth in Resources, open pit and mine life
• Broadest, highest-grade assays come from north / south ends of currently modelled open pit, indicating significant potential for further extensions of higher value mineralisation
• New assays include:2

Hole ID Interval Including:
TKB0457 52m @ 0.95 g/t Au from 101m depth 2m @ 2.84 g/t Au from 117m depth
TKB0462 40m @ 1.64 g/t Au from 155m depth 2m @ 3.83 g/t Au from 164m depth

TKB0470 46m @ 1.13 g/t Au from 137m depth 5m @ 2.34 g/t Au from 172m depth
TKB0492 43m @ 1.82 g/t Au from 39m depth 8m @ 3.79 g/t Au from 42m depth, and
2m @ 4.14g/t Au from 67m depth, and
2m @ 6.65 g/t Au from 71 m depth
TKB0494 39m @ 1.12 g/t Au from 52m depth 6m @ 3.46 g/t Au from 58m depth

- *Barton targeting completion of a Pre-Feasibility Study (PFS) before the end of calendar year 2026, to support a Mining Lease (ML) application and expedited project finance conversations*

Barton Managing Director Alexander Scanlon said:

“Phase 1 drilling already confirmed the higher-grade mineralisation driving Tunkillia’s exceptional economics, where its ‘Starter Pit’ can repay development 2x over in the first year alone – assuming A$5,000/oz gold and A$50/oz silver.

“We are therefore pleased to report that Area 51 has returned higher-grade results than anticipated, indicating potentially higher-value mineralisation, Resource growth and also extensions of the optimised open pit and mine life.

“Tunkillia is on track for dual gold and silver Resource upgrades, conversion to Ore Reserves, completion of a PFS and a Mining Lease application, all in the context of a considerably more favourable gold and silver price environment.”

Barton Gold Challenger Assays Extend New Open Pittable Mineralisation Targeting new JORC Mineral Resources at ‘Challenger 3’ target

Barton Gold Holdings Limited (ASX:BGD, OTCQB:BGDFF, FRA:BGD3) (Barton or Company) is pleased to announce further assay results from recent drilling at its South Australian Challenger Gold Project (Challenger).

These assays come from the CSSW Deposit and ‘Challenger 3’ target, both of which are potential new open pits.

Challenger is the site of the Company’s fully permitted Central Gawler Mill (CGM). A Definitive Feasibility Study (DFS) is underway targeting an initial 3 – 4 year Stage 1 ‘baseline’ operation utilising only historical higher-grade tailings from tailings storage facility 1 (TSF1) and limited, near-surface materials without disturbing Challenger’s historical high-grade underground mine, its mineralisation or its infrastructure access.

HIGHLIGHTS

• 8,065m reverse circulation (RC) Resource upgrade drilling recently completed at Challenger ‘Main’,
‘Challenger West’ (CW) open pits, and ‘Challenger South-Southwest’ (CSSW) and ‘Challenger 3’ targets1
• New assays confirm CSSW and Challenger 3 mineralisation, and support a potential new Challenger 3 JORC (2012) Mineral Resource Estimate (MRE), including:
Hole ID Interval Including:
CHB0197 8m @ 1.68 g/t Au from 55 metres 1m @ 7.64 g/t Au from 57 metres
CHB0204 6m @ 4.46 g/t Au from 30 metres 2m @ 12.1 g/t Au from 30 metres
CHB0206 10m @ 1.33 g/t Au from 44 metres 1m @ 5.61 g/t Au from 46 metres
CHB0213 10m @ 2.28 g/t Au from 33 metres 1m @ 9.12 g/t Au from 42 metres
CHB0222 7m @ 3.28 g/t Au from 30 metres 1m @ 16.5 g/t Au from 30 metres
CHB0225 2m @ 5.12 g/t Au from 30 metres 1m @ 9.17g/t Au from 31 metres
CHB0236 6m @ 1.66 g/t Au from 24 metres 1m @ 6.93 g/t Au from 25 metres
• Recent assays have also identified new high-grade mineralisation up to 170 g/t Au in the ‘Main’ open pit walls, and mineralisation up to 60 g/t Au in the Challenger West open pit floor2
• Challenger DFS underway targeting a viable, simplified ‘baseline’ Stage 1 operation to underwrite restart of CGM and maximise Challenger, Tarcoola, Wudinna and Tolmer development optionality

Barton Gold Managing Director Alexander Scanlon commented:

“Following recent high-grade assays up to 170 g/t Au and 60 g/t Au from Challenger’s ‘Main’ and ‘West’ open pits, we are pleased to share new assays confirming significant mineralisation to support potential new adjacent open pits.

“This kind of near-surface mineralisation adjacent to our existing Central Gawler Mill provides ideal low-risk feed to de-risk an operational restart at Challenger. We look forward to sharing further Challenger updates soon.”

Barton Gold's First Challenger Assays Return Grades up to 170g/t Au

New zones of high-grade mineralisation identified in open pit walls

Barton Gold Holdings Limited (ASX:BGD, OTCQB:BGDFF, FRA:BGD3) (Barton or Company) is pleased to announce initial assay results from recent drilling at its South Australian Challenger Gold Project (Challenger).

HIGHLIGHTS

• 8,065m reverse circulation (RC) Resource upgrade drilling recently completed at Challenger 'Main',
'Challenger West' (CW) open pits, and 'Challenger South-Southwest' (CSSW) and 'Challenger 3' targets
• Challenger's 'Main' open pit operated during 2002 – 2004; drilling has identified new highgrade mineralisation in the open pit's walls and extensions, where new assays include:

Hole ID Interval Including:

CHB0140 9m @ 2.20 g/t Au from 97 metres 1m @ 6.63 g/t Au from 103 metres
CHB0158 11m @ 5.67 g/t Au from 24 metres
10m @ 17.7 g/t Au from 40 metres
1m @ 50.9 g/t Au from 27 metres
1m @ 170.7 g/t Au from 43 metres
CHB0159 14m @ 1.01 g/t Au from 19 metres
3m @ 4.72 g/t Au from 40 metres
3m @ 2.55 g/t Au from 22 metres
1m @ 11.8 g/t Au from 40 metres
CHB0165 3m @ 6.85 g/t Au from 121 metres 1m @ 15.0 g/t Au from 121 metres

- Further assays pending for the CW open pit, and the CSSW and Challenger 3 open pit targets
- Challenger DFS underway targeting a viable, simplified 'baseline' Stage 1 operation to underwrite restart of CGM and maximise Challenger, Tarcoola, Wudinna and Tolmer development optionality.

Challenger is the site of the Company's fully permitted Central Gawler Mill (CGM). A Definitive Feasibility Study (DFS) is underway targeting an initial 3 – 4 year Stage 1 'baseline' operation utilising only historical higher-grade tailings from tailings storage facility 1 (TSF1) and limited, near-surface materials without disturbing Challenger's historical high-grade underground mine, its mineralisation or its infrastructure access.

Commenting on the first Challenger assay results, Barton Managing

Director Alexander Scanlon said:

“The Challenger open pit operated from 2002 to 2004, at a time of record low gold prices. Our drilling has been targeting 1-2 g/t Au mineralisation on open pit extensions to provide a source of lower-risk feed for Stage 1 operations.

“We were therefore surprised to find much higher-grade mineralisation than expected – up to 170 g/t Au – in previously unmodelled extensions of mineralisation immediately adjacent to the open pit.

“This mineralisation has not previously been drilled and is not closed off, indicating potential for further extensions and additional near-pit discoveries.

“This kind of on-pit, near-surface mineralisation adjacent to our existing Central Gawler Mill provides ideal low-risk feed to de-risk an operational restart at Challenger. We look forward to sharing further Challenger assays soon.”

Barton Gold Begins The 2026 Tunkillia Drilling Program

Barton Gold (ASX: BGD)

Announced the start of water bore drilling at its South Australian Tunkillia Gold Project.

Underdale Drillers has been engaged to complete a program totalling ~900m drilling for preliminary water testing, where success in locating additional sources of nearby water has the potential to both de-risk and improve project economics.

	Barton Gold	ASX: BGD
	Stage	Production, development
	Metals	Gold
	Market Cap	A$264 Million @A$1.11
	Location	South Australia
	Website	www.bartongold.com.au

Barton Gold Begins The 2026 Tunkillia Drilling Program

Targeting Ore Reserves, PFS and ML application by the end of 2026

Barton Gold Holdings Limited (ASX:BGD, OTCQB:BGDFF, FRA:BGD3) (Barton or Company) is pleased to announce the start of water bore drilling at its South Australian Tunkillia Gold Project (Tunkillia).

Underdale Drillers has been engaged to complete a program totalling ~900m drilling for preliminary water testing. Success in locating additional sources of nearby water has the potential to both de-risk and improve project economics.

Barton is also pleased to confirm that Tunkillia's planned second phase JORC (2012) **Mineral Resource upgrade** drilling will start as planned during March 2026, with ~28,000m RC drilling targeting the conversion of the balance of Tunkillia's OSS modelled open pit mineralisation (beyond S1 / S2) to JORC (2012) 'Indicated' category.

A ~3,000m diamond drilling (DD) program is planned to run in parallel with phase 2 RC drilling, targeting the infill and expansion of Tunkillia's geotechnical and metallurgical databases in support of further open pit design optimisation,

detailed recovery and production modelling, and a PFS and ML application by the end of 2026.

HIGHLIGHTS

• May 2025 Optimised Scoping Study (OSS) outlined a compelling Tunkillia development project:

o Annual production: ~120,000oz gold and ~250,000oz silver
o Total LOM operating cash: ~A$2.7 billion (unlevered, pre-tax)
o Net Present Value (NPV7.5%): ~A$1.4 billion (unlevered, pre-tax)
o Internal Rate of Return (IRR): ~73.2% (unlevered, pre-tax); and
o Payback period: ~0.8 years (unlevered, pre-tax)

• Barton expediting Tunkillia toward Mining Lease (ML) application, with AUD gold and silver prices now over $1,500/oz and $50/oz higher (respectively) than used for OSS revenue estimates
• ~900m water drilling has started, targeting potential new water sources near OSS open pits
• ~28,000m second phase reverse circulation (RC) Resource upgrade drilling to begin March 2026,
with ~3,000m Resource, geotechnical & metallurgical diamond drilling (DD) to start in parallel
• Targeting JORC (2012) Ore Reserves, pre-feasibility study (PFS) & ML application by end of 2026

Barton MD Alexander Scanlon Commented on Tunkillia's 2026 drilling programs,

"The Tunkillia OSS demonstrated the financial and capital leverage available to large-scale bulk processing operations, with the major advantage of a higher-grade 'Starter Pit' that can pay back development costs 2x over in the first year.

"With recent Resource upgrade drilling results further de-risking this profile, we are advancing our other development drilling programs in support of planned JORC Ore Reserves, a PFS, and a Mining Lease application by the end of 2026.

"Following the submission of our Mining Lease application, we will expedite Tunkillia's project finance discussions in parallel with our targeted reinstatement of 'Stage 1' operations at our neighbouring Challenger Gold Project.

"Our objective is to bring Tunkillia online as soon as possible to realise our gold production target of 150,000oz annually."

Barton Gold CEO Sends a Positive Message for 2026

Barton Gold (ASX: BGD)

Md and CEO Alexander Scanlon emailed investors with a positive note highlighting the company's achievements during 2025 and the prospects for production startup in late 2026.

Credits Barton Gold

	Barton Gold	**ASX: BGD**
	Stage	**Production, development**

Barton Gold CEO Sends a Positive Message for 2026

Dear Investors & Colleagues,

I hope this mail finds you well, enjoying the holidays with friends and family, and looking forward to an exciting 2026. What a massive year it has been for Barton.

2025 has been transformational in all respects, with several notable project and corporate achievements jointly symbolising the ‘pivot point’ between the last 5 years of ‘building our thesis’, and the next 5 years of ‘executing our plan’ and realising the value of the platform we have methodically and [very] cost-efficiently assembled.

These include:

Exploration & Development

• Tunkillia Resources growth to 1.6Moz Au and an Optimised Scoping Study (OSS) for a ~120kozpa gold project with a 73% IRR and sub- 1 year payback;

• Recent upgrade drilling infilling Tunkillia's key S1 'Starter Pit' with broad, high-grade assays, de-risking this financial profile and project development;

• Dual Resource upgrades to +300koz Au at Challenger, a low-cost restart estimate, and start of a DFS targeting 2026 start of works at our existing mill;

• dual discoveries at the 'Tolmer' prospect, with grades up to 83.6g/t Au and 17,600g/t Ag in one of Australia's highest grade modern silver discoveries; and

• a high-resolution gravity targeting repeats of high-grade quartz vein lodes at Challenger which historically produced ~1.2Moz gold (results pending);

Corporate

• over $9m FY25 revenues and our first ever half yearly profit of $3.1m;

• Wudinna's acquisition for high-grade feed to the CGM and Tunkillia mills;

• BGD's addition to the S&P Global ASX 'All Ordinaries' Index; and

• a Placement led by Franklin Templeton completed at $1.25 per share.

We are also now collectively witnessing concrete evidence of the once-in-a-generation paradigm shifts in global monetary, trade and geopolitical structures that I / we / Barton have been discussing in our general economic commentary for several years now.

We are therefore not surprised to see gold significantly outperforming UBS's June 2024 forecast for USD $2,800 / A$4,000 by the end of 2025. Widely ridiculed at the time as sensationalist, UBS now sees USD $5,000 gold by September 2026 – a perhaps relatively sober outlook given the aforementioned ongoing global macro / structural evolution, and that this would represent only a further ~15% gain from current levels.

Our strategy to rapidly scale Barton's development options and prepare it for low-cost commercialisation ahead of these anticipated market innovations is therefore at least timely in its execution, if not prescient in its design. Either way, we and our strategy are now well positioned, and the market is becoming increasingly aware of it.

Growing awareness of our performance, and of these global trends, has seen BGD close trade today at $1.32, just shy of our all time high, on unusually high trading volumes for this time of year. ***This represents a 426% gain for the year and substantial 'alpha' generated – outperforming producers (GDXJ) by a factor of 2.6 to 1, and gold itself by 6.6 to 1.***

2026 will be about leaning into the momentum we have generated, continuing to build this market awareness of our story, commercialising the platform we have assembled, and placing Barton on track to realise our vision of developing South Australia's largest independent pure-play gold producer.

Among many other goals for 2026, we aim to:

• complete nearly 50,000 metres of drilling at Challenger, Tunkillia and Tolmer's silver discovery, targeting multiple JORC upgrades across these projects;

• deliver a DFS, finance and start of site works for 'Stage 1' Challenger operations;

• deliver a PFS, JORC Ore Reserves and a Mining Lease application for Tunkillia; and

• extend our track record of low dilution and creative asset monetisation.

"With Challenger gravity survey results and several Tunkillia drilling assays oustanding, we expect to start 2026 with significant early news flow which will grow steadily as we execute and report on these many and multi-faceted efforts.

"I look forward to sharing numerous updates as we move through an exciting 2026. As always, we are honoured to have your support, and will continue to work as hard for your investment as you did.Wishing you all the best for a healthy, safe and prosperous 2026"

Alexander Scanlon – Managing Director & CEO

Stocks to watch in 2026 – Barton Gold

Stocks to watch in 2026 – Barton Gold

Barton Gold is due to enter production in late 2026 at its Gowler Mill in South Australia.

Barton is an active company, and management are targeting 150,000 Oz gold production annually in the future.

Challenger plant – Courtesy of Barton Gold

	Barton Gold	**ASX: BGD**
	Stage	**Production, development**
	Metals	**Gold**
	Market Cap	**A$329 Million @A$1.33**
	Location	**South Australia**
	Website	**www.bartongold.com.au**

Comment

I have to admit, of all the stocks on my watchlist ,and in my current portfolio, Barton is my number one selection for having the most potential to create shareholder value in 2026.

The company has a strong management team that are quietly achieving their objectives moving towards the first phase of a two phase production schedule.

They are refurbishing an existing mill for a small capex, and are looking to commence gold production at the end of 2026, or the beginning of 2027.

For that reason, provided the gold price remains high around current levels, or higher of course, I see Barton climbing towards the production peak on the Lassonde Curve later this year.

Phase 2 production is three years away, when the company hope to produce 150,000 ounces of gold production per annum, which will produce a massive profit if the gold price remains high.

Management own 21% of the stock, and institutions 36%, a good sign of confidence in the project and management.

Management visit Europe frequently, I meet CEO Alex Scanlon whenever he comes, he's very communicative, which is another tick in the box for my personal criteria.

=======

Stocks to watch in 2026 – Barton Gold

Barton Gold is due to enter production in late 2026 at its Gowler Mill in South Australia.

Barton is an active company and management are targeting 150,000 Oz gold production annually in the future.

The company are entering a two phase production plan, with a first stage due to enter production late 2026, early 2027. I personally always allow for some slippage in the timeline as mining is a complicated business.

The mill is fully permitted, and therefore I don't expect too many challenges for the restart.

Phase 1

Involves reprocessing historic tailings, which provides a low cost entry to production. I like tailings projects, the hard work has already been done, they sit on surface, not in the ground, and new technology makes it possible to produce from what's left over from their original processing.

Highlights

A *DFS* is due in March 2026.

Mill commissioning, and phase 1 operations are due to commence at the end of 2026.

Capex A$26 million.

Mill capacity will be between 600 and 650 ktpa.

Future Plans

Barton’s long term target after phase 2 is initiated is to produce 250,000 ounces of gold per annum.

Phase 1 production is designed to give Barton a chance to earn early cashflow as the longer term plans develop.

The latest Barton Gold Corporate presentation can be viewed HERE

In conclusion, I believe Barton Gold will deliver, the risk level looks at the lower end of the scale, being a tailings project to be processed at a refurbished mill, with low capex.

One to watch during 2026, especially as production startup approaches, as I expect the normal Lassonde Curve rules of shareholder value creation to apply as production approaches.

Barton Gold High Resolution Gravity Survey Targets Challenger Repeats

Targeting near-mine indications of high-grade quartz vein lodes

Barton Gold Holdings Limited (ASX:BGD, OTCQB:BGDFF, FRA:BGD3) (Barton or Company) is pleased to confirm the start of a high resolution airborne gravity survey surrounding its South Australian Challenger Gold Project (Challenger).

The program is part of Barton's research and development (R&D)

initiatives
trialling various technologies in historically under-explored terrain to define new geological models.

HIGHLIGHTS

• High resolution survey over northern portion of EL 6502, which hosts the Challenger Gold Mine
• Targeting gravity anomalies indicative of structures similar to Challenger's high-grade gold lodes

Barton Managing Director Alexander Scanlon said:

> *"With a DFS underway for the phased restart of operations at Challenger, leveraging our Central Gawler Mill, we are diligently pursuing our regional enhancement strategy.*

> *"This includes not only our Tarcoola and Wudinna blending feed projects, but also the potential for near-mine repeats of Challenger's high-grade quartz vein lodes.*

> *"Challenger was developed during a period of record low gold prices, and as such historical investment favoured rapid development over local exploration. With existing infrastructure, new discoveries could be highly valuable."*

Barton Gold Tunkilia Drilling Ahead Of Schedule

Barton Gold (ASX: BGD)

Confirmed that upgrade drilling for the 'Starter Pits' at its South Australian Tunkillia Gold Project is progressing ahead of schedule and under budget, with approximately 2/3 of the current ~18,000m program now complete.

Barton Gold Tunkillia Upgrade Drilling – Update

Program advancing rapidly, ahead of schedule and under budget

Barton Gold Holdings Limited (ASX:BGD, OTCQB:BGDFF, FRA:BGD3) (Barton or Company) is pleased to confirm that upgrade drilling for the 'Starter Pits' at its South Australian Tunkillia Gold Project (Tunkillia) is progressing ahead of schedule and under budget, with approximately 2/3 of the current ~18,000m program now complete.

Assuming revenues based upon a gold price of AUD $5,000 / ounce, the 'Stage 1' and 'Stage 2' optimised open pit areas are modelled to yield 365koz Au and A$1.3bn operating profit during Tunkillia's first ~2.5 years alone.

HIGHLIGHTS

• Reverse circulation (RC) upgrade drilling on high value ‘Starter Pits’ ahead of schedule, 2/3 complete
• First assays from highest value ‘Stage 1’ area anticipated to be received during the coming weeks

Assuming revenues based upon a gold price of AUD $5,000 / ounce, the ‘Stage 1’ and ‘Stage 2’ optimised open pit areas are modelled to yield 365koz Au and A$1.3bn operating profit during Tunkillia’s first ~2.5 years alone.

Estimated ‘Starter Pits’ cash flows are modelled to repay development more than 2x over during the first year of operations, and more than 3x over during the first 2 years, offering an attractive credit financing profile.

This initial round of drilling is therefore designed to convert these two pit areas to JORC (2012) ‘Measured’ and ‘Indicated’ categories, reinforce modelling confidence and support expedited project financing discussions.

Barton Managing Director Alex Scanlon said:

“We are pleased to confirm that the first phase of Tunkillia upgrade drilling is progressing well, ahead of schedule and under budget, with contractors Raglan Drilling consistently delivering an average of over 300 metres drilling per day.

“Prior drilling in the ‘Starter Pits’ area has typically returned Tunkillia’s highest grades. Our modelling that indicates that these pits can deliver a payback period of less than 1 year in operations, offering a very attractive credit profile.”

Barton Gold Starts

Geotechnical Drilling at Central Gawler Mill

Results to inform detailed TSF1 mine design, schedule and costs

Barton Gold Holdings Limited (ASX:BGD, OTCQB:BGDFF, FRA:BGD3) (Barton or the Company) is pleased to confirm that geotechnical drilling has started in support of a recently launched Definitive Feasibility Study for 'Stage 1' production (Stage 1 DFS) at the Company's South Australian Challenger Gold Project (Challenger).

The planned program includes 5 sonic drilling holes to recover TSF1 materials for laboratory testing, 24 holes for Cone Penetration Testing (CPTu) and further laboratory testing, and 3 holes for push tube density testing.

The program is expected to take three weeks to complete, with the results to inform the dry recovery of TSF1 tailings materials, detailed mine design, a mining schedule and estimate of mining costs for the Stage 1 DFS.

Barton Managing Director Alexander Scanlon commented;

"With the Stage 1 DFS now underway, we are excited to kick off the first of several production-related work programs that will inform key elements of mine design, scheduling,

equipment selection and operating costs for tailings recovery.

““Following a $15m placement led by Franklin Templeton, Barton is well funded to advance the restart of operations at its Central Gawler Mill, with approximately $20m cash in the bank and credit financing discussions underway.

“We are now on the road to production, leveraging our fully permitted Central Gawler Mill to operations and growth.

“This is an invaluable stepping stone for our vision to become South Australia’s largest independent gold producer.“

Barton Gold Expedite Tolmer Soil Sampling Tests

Barton Gold (ASX: BGD,)

Confirmed that an expedited soil sampling program has been completed over a ~1.9km2 area surrounding the new 'Tolmer' high grade silver discovery at the Company's South Australian

Tarcoola Gold Project.

~380 samples have been collected *with assay results expected during September 2025*.

Barton Gold Expedited Tolmer Soil Sampling Tests ~1.9km2 Footprint

Following expanded 2,882m RC drilling program (results pending)

Barton Gold Holdings Limited (ASX:BGD, FRA:BGD3, OTCQB:BGDFF) (Barton or Company) is pleased to confirm that an expedited soil sampling program has been completed over a ~1.9km2 area surrounding the new 'Tolmer' high grade silver discovery at the Company's South Australian Tarcoola Gold Project (Tarcoola). ~380 samples have been collected *with assay results expected during September 2025*.

HIGHLIGHTS

• Tolmer high-grade silver discovery: expedited soil geochemistry program completed over ~1.9km2 area surrounding

recently expanded reverse circulation (RC) drilling program.

Barton Managing Director Alexander Scanlon commented;

“We recently expanded our Tolmer ‘silver zone’ drilling by ~50% to cover a ~400 metre by ~250 metre area based, in part, upon further geological surface reconnaissance.

“This program extends that reconnaissance to a broader area of ~1,700 metres by ~1,100 metres to see if we can potentially identify a larger mineralised footprint.”

Barton Gold Acquires the Wudinna Gold Project

Barton Gold Holdings Limited (ASX:BGD, FRA:BGD3, OTCQB:BGDFF) (Barton or Company) is pleased to announce the acquisition of the Wudinna Gold Project (Wudinna) from Cobra Resources PLC (Cobra).

Wudinna is located approximately 200km southeast of Barton's South Australian Tunkillia Gold Project (Tunkillia) and 200km west of Whyalla, South Australia in the north-central area of the Eyre Peninsula.

Acquisition of Wudinna Gold Project

HIGHLIGHTS

• Binding terms for acquisition of 279,000oz Au South Australian gold development project
• Completion subject only to vendor shareholder approval; total consideration up to $15 million majority settled in Barton equity and performance milestone payments (see 'Key Terms' below):
o Initial consideration: $1.0 million, including $200,000 cash, on issue of New Tenements
o Final Settlement: $4.5 million, including $300,000 cash, on transfer to Barton Gold
o Contingent benefits: up to $9.5 million upon exploration and production milestones

Barton Managing Director Alexander Scanlon commented;

"We are pleased to announce binding terms to acquire the Wudinna Gold Project, which upon Completion of the transaction will add a further 279,000oz gold to our South Australian development portfolio.

“The assets offer significant low-cost optionality to Barton’s long-term regional development objectives, and we will be pleased to welcome Cobra and its shareholders to Barton’s register as we steadily unlock value across our entire platform.

“We applaud South Australia for a new regulatory framework permitting the sub-division of mineral tenements. This enabled both a transaction which otherwise would not have materialised, and Wudinna’s advancement.”

Barton Gold Grows Resources at Central Gawler Mill

Barton Gold (ASX: BGD)

Announced an updated MRE for its South Australian Challenger Gold Project.

The updated Challenger MRE has identified several potential sources of economically viable gold mineralisation adjacent to the Central Gawler Mill for use as lower-cost and lower-risk ‘Stage 1’ mill feed.

Barton Gold ‘Stage 1’ Resources at Central Gawler Mill Grows to 223koz Au

Priority focus on higher-grade tailings and open pit materials

Barton Gold Holdings Limited (ASX:BGD) (Barton or Company) is pleased to announce an updated MRE for its South Australian Challenger Gold Project (Challenger).

The updated Challenger MRE follows a detailed analysis of historical production and drilling records, and new drilling and site sampling to validate these historical records and actual metallurgical characteristics.

Based upon these analyses, Barton has identified several potential sources of economically viable gold mineralisation adjacent to the Central Gawler Mill for use as lower-cost and lower-risk ‘Stage 1’ mill feed.

HIGHLIGHTS

• Challenger JORC (2012) Mineral Resources Estimate (MRE) grow to 223koz gold (9.56Mt @
0.72 g/t Au), including 81,200oz Au contained in the existing high-grade open pit zones:

o Main open pit: 69,600oz Au (0.64Mt @ 3.39 g/t Au);
o Challenger West open pit: 11,600oz Au (0.03Mt @ 10.6 g/t Au);
o Main U/G (1,000 – 900mRL): 21,900oz Au (0.17Mt @ 3.98 g/t Au);
o Challenger SSW Deposit: 12,200oz Au (0.40Mt @ 0.95 g/t Au);
o Tailings Facility 1: 55,500oz Au (3.19Mt @ 0.54 g/t Au); and
o Tailings Facility 2: 51,800oz Au (5.13Mt @ 0.31 g/t Au).
• Barton's total gold JORC Mineral Resources increase to 1.9Moz Au (73.0Mt @ 0.79 g/t Au)
• Next steps for 'Stage 1' commercialisation pathway include:
o re-extension of Challenger underground JORC Mineral Resources model to depth;
o preliminary capital cost estimate for recommissioning of Central Gawler Mill;
o mining studies to prioritise sources of mineralisation in 'Stage 1' operations area; and
o feasibility studies and JORC Reserves estimate for an initial 'Stage 1' operation.
• **Targeting feasibility studies by end of 2025, initial 'Stage 1' operations by end of 2026**

Barton MD Alexander Scanlon said:

"As indicated to the market for the past ~24 months, we have been analysing the potential for JORC Mineral Resources in the immediate vicinity of our fully permitted Central Gawler Mill.

"This infrastructure is a significant leverage point for BGD's investors, and provides the option for a shorter, lower-cost, and lower-risk pathway to operations and the re-

rating of BGD to ‘producer’ status.

“There is significant arbitrage value in this ‘real option’.

“With the sustained upward move in gold prices, we will now look to exercise that option. During the balance of 2025 we will complete feasibility analyses to determine the preferred development pathway, with the objective to commence our initial ‘Stage 1’ operations before the end of 2026.”

Barton Gold $3m Premium Placement Complete, Drilling Underway

Barton Gold (ASX: BGD)

Announced that the $3m premium placement announced on 26 May 2025 has completed.

The Company also confirms that drilling is now underway on its new high-grade Tolmer silver discovery.

.

Barton Gold $3m Premium Placement Complete, Drilling Underway

High-grade Tolmer silver & Tunkillia ‘Starter Pit’ drilling programs funded.

Barton Gold Holdings Limited (ASX:BGD, FRA:BGD3, OTCQB:BGDFF) (Barton or Company) is pleased to announce that the $3m premium placement announced on 26 May 2025 has completed (Placement).

The Company also confirms that drilling is now underway on its new high-grade Tolmer silver discovery, recently confirmed by Barton during March and April 2025, with priority focus on high-grade silver targets.

The Placement was led by Australian precious metals development focused investors.

The Placement price of $0.70 per Share represents a ~4% premium to the Company’s last traded price and a ~25% premium to the Company’s 1 month (20 trading day) volume weighted average closing price (VWAP) of $0.562 per share on the last trading day prior to the Placement (Thursday, 22 May 2025).

A total of 4,285,722 new Placement Shares have been issued pursuant to the Company’s available Listing Rule 7.1 capacity.

The Placement was managed by Barton. **No brokerage, costs or fees have been incurred.**

All funds will be allocated to the acceleration of value-add exploration and project development initiatives, with Placement funds primarily allocated to Reserve conversion

upgrade drilling for Tunkillia’s ‘Starter Pit’.

HIGHLIGHTS

• $3 million premium Placement to Australian investors completed to fund JORC Resources
upgrade drilling planned for ~September 2025 at Tunkillia’s high value ‘Starter Pit’
• Placement price of $0.70 per share represents a:
o ~4% premium to last traded price of $0.675 / share on Thursday, 22 May 2025
o ~25% premium to Barton’s 1 month (20 trading day) VWAP of $0.562 / share
• Other drilling advancing quickly on high-grade Tolmer gold and silver targets; priority
target is the ‘western silver’ zone where previous drilling intersected up to 17,600 g/t Ag.

Barton Managing Director Alexander Scanlon commented

“The success of this Placement is a strong endorsement of Barton’s low-dilution development strategy.

“Including this Placement, since our June 2021 IPO four years ago Barton has issued less than $13 million in new equity, while generating over $12m (net of costs) in additional non-dilutive funds through asset monetisation initiatives.

“The result has been significant progress and value creation on all fronts with minimal shareholder dilution, reflecting our team’s strong alignment with, and focus on preservation of value for, our existing shareholders.

“We are excited to be accelerating several value-add workstreams, including ‘Stage 1’ operations plans, Tunkillia long-lead Mining Lease and PFS programs including Reserve conversion drilling, and expedited drilling on our recent Tolmer high-grade gold and silver discoveries.

“We look forward to sharing many more updates soon.”

Barton Gold Monthly Update

Barton Gold (ASX: BGD)

CEO Alex Scanlon released an update following several positive events recently.

The company has been very active, the trading volume and the share price has been rising.

Photo courtesy of Barton Gold

	Barton Gold	ASX: BGD
	Stage	Production, development
	Metals	Gold
	Market Cap	A$79 Million @ 36c
	Location	South Australia
	Website	www.bartongold.com.au

Comment

I have followed the Barton Gold story for a couple of years and hold CEO Alex Scanlon in high regard.

Barton have just announced the Tolmer silver discovery, which was totally unexpected, and was probably the reason for the recent run up in volume traded and share price.

The story is becoming more compelling and I am looking to top up my existing holding as the new ISA year has just started.

The post below is the note sent to shareholders by the CEO.

—-

Barton Gold Wrap Up (March 2025)

Click to view Barton's ASX Announcements

From the Desk of the CEO

Dear Investors & Colleagues,

Apologies in advance – this is a bit longer than usual with everything going on!

It has been an extraordinary month for Barton as we continue marching toward our objective to become South Australia's largest independent gold producer. Against a difficult and volatile backdrop of markets and geopolitics, Barton is primed to benefit through both a shift to 'producer' status, and record high gold prices over A$5,000/oz.

Looking back

Several key announcements over the past month have seen BGD shares surge to new record highs. These include a few pleasant surprises, and acceleration of commercial opportunities that we have been diligently advancing for the past few years:

• the growth of Tunkillia JORC Resources to 1.6Moz Au and 3.1Moz Ag – ahead of an Optimised Scoping Study targeting materially improved economics;

• a $3.1 million net profit for the Half Year to 31 December 2024 – an unusual and possibly unique accomplishment for an 'exploration junior'; and

• a new 'Tolmer' silver discovery **with grades up to 17,600g/t Ag** – right next to our recent Tolmer gold discovery reporting gold grades up to 83.6g/t Au.

While most of our announcements are baked over years of strategic planning and execution, the Tolmer silver discovery was indeed a surprise find in the goldfield.

An intersection of 6m @ 4,747g/t Ag (28,482 gram-meters) is among the highest ever reported in Australia, and ranks alongside globally renowned silver jurisdictions.

Some things – like Half Year profits – just don't happen with 'juniors', and garnered much attention along with our declared intention to restart 'Stage 1' operations from 2026. We are honoured to have featured in the weekly column of industry legend Barry FitzGerald, and to discuss our many upcoming plans with Jess Fertig of Small Caps.

Edison Research also increased its BGD price target to $0.77 – 1.11, and up to $6.15 on the successful delivery of our future 'Stage 2' plans. Finally, Collins Street Asset Management increased its BGD position to 14.1% through on-market purchases.

This has generated a great deal of enthusiasm at conferences this week and last, with over 100 investors joining our register, more than 5% of our issued equity traded, and significant excess demand driving BGD to a new high of $0.415.

Coming up The market has risen to meet our long-term strategy, and Barton is accelerating commercialisation of both its 'Stage 1' platform (from 2026) and its 'Stage 2' Tunkillia project. Our Central Gawler Mill is a significant leverage point, providing a short, lower-cost/risk pathway to 'Stage 1' operations, a re-rating to 'producer', and cash flow to fund Tunkillia's development and our growth to a 150,000oz / annum gold producer.Key catalysts during the next few months will include:

• an accelerated Tunkillia Optimised Scoping Study (previously a 30 June target), where we expect materially reduced power costs and improved economics;

• the accelerated start of Tunkillia's early feasibility and development programs, including ML environmental studies and Resource upgrades;

• details of our plans for 'Stage 1' operations at our Central Gawler Mill; and

• updated Resource calculations for our 'Stage 1' Tarcoola Perseverance Mine.

We also have 2,230m of Tolmer drilling assays pending, including holes testing fresh rock below the 6m @ 4,747g/t Ag interval sitting in transitional mineralisation – if silver extends into the fresh rock, it will be a very exciting result.

Noting the current volatility in markets, we are well positioned to navigate through, and prosper, in environment of increased global uncertainty and record gold prices. As of 13 January Barton had $9.2m cash. We continue to make judicious use of these resources, and have multiple further asset monetisation opportunities to hand.

We have some very exciting months ahead. Stay tuned for a great deal more news.

Regards,

Alexander Scanlon

Managing Director & CEO
