Equinox Gold Delivers Strong First Quarter with 197,628 Ounces of Gold Production, \$990 Million of Debt Reduction and Inaugural Dividend Payment

[Download](#)

[Equinox Gold Corp. \(TSX: EQX, NYSE American: EQX\)](#) (“Equinox Gold” or the “Company”) is pleased to announce production results for the three months ended March 31, 2026 (“Q1” or the “Quarter”), along with an update on operations at its two

Canadian cornerstone assets: Valentine Gold Mine (“Valentine”) in Newfoundland & Labrador and Greenstone Gold Mine (“Greenstone”) in Ontario.

All dollar figures are in United States dollars unless otherwise noted.

Darren Hall, CEO of Equinox Gold, commented:

“Equinox Gold delivered a strong first quarter, producing 197,628 ounces (“oz”) of gold, including 87,402 oz from our two Canadian operations.

“Canadian production is expected to be weighted to the second half of the year as the assets continue to ramp-up, supported by steady contributions from Nicaragua and Mesquite.

“Together, our operations are expected to generate strong cash flow in the current gold price environment, supporting the implementation of a two-pronged capital return program.

“At Greenstone, improvement programs initiated in 2025 continue to deliver positive results with winter mining rates averaging 180,248 tonnes per day, consistent with

expectations and Q4 2025 performance.

“Q1 2026 mill throughput averaged 24,544 tpd, with 51% of days exceeding nameplate capacity (27,000 tpd) compared to 36% in Q4 2025. The team is focused on continued optimization and unlocking further value from the asset, consistent with the long-term profile outlined in the updated technical report.

“Valentine continues to ramp-up well with the process plant averaging 6,192 tpd, or 90% of nameplate capacity for the full quarter, and 101% of nameplate for February and March.

“We are also actively exploring on the property, following up on the exploration success announced in February, and advancing plans for the Phase 2 expansion, which together are expected to increase production and extend the mine life of this cornerstone asset.

“The sale of our Brazil operations, coupled with strong cash flow from our operating mines, allowed us to repay \$990 million of debt during the quarter. With a strengthened balance sheet and confidence in our long-term outlook, we paid our first dividend of \$0.015 per share on March 26, 2026.

“Across the portfolio, we are advancing exploration to support organic growth, while progressing technical studies at both Castle Mountain and Los Filos, which together have the potential to contribute more than 450,000 ounces of

additional annual production when in operation.

“Delivering meaningful, long-term shareholder value through operational excellence, disciplined capital allocation and successful execution of organic growth opportunities remains our north star.

“We appreciate the support of our team and our shareholders as we work together to build a leading, Americas-focused gold producer.”

Q1 2026 Highlights

- **Produced 197,628 ounces of gold**, including 60,338 oz from Greenstone, 27,064 oz from Valentine, 13,174 oz from Mesquite, 81,280 oz from Nicaragua, 13,473 oz from Brazil and 2,299 oz from Castle Mountain
- **Resource expansion and discovery drilling continues** across the portfolio
 - Announced the new high-grade Minotaur gold discovery at Valentine, 8 km north of the mill, and continued to identify consistent gold mineralization in the Frank Zone, along trend from existing Mineral Reserves
- **Canadian production estimated at 543,000 ounces per year from 2026-2036** based on new technical reports (see [March 30, 2026 news release](#))
 - Greenstone: Average 320,000 ounces per year; opportunities for mine life extension and

production growth from underground mineral resources, near-mine and regional deposits and mill throughput increase

- Valentine: Average 223,000 ounces per year with successful completion of the Phase 2 expansion; estimated \$414 million capital cost and 24-month construction timeline; expansion to be funded through cash flow and available credit facility; opportunities for mine life extension from Frank Zone and future exploration success.

Equinox Gold to Produce 540,000 unces of Gold PA for 10 years

Equinox Gold Corp. (TSX: EQX, NYSE American: EQX) (“Equinox Gold” or the “Company”) is pleased to report results from updated technical reports for its Greenstone Gold Mine (“Greenstone”) located in Ontario, Canada and its Valentine Gold Mine (“Valentine”) located in Newfoundland & Labrador, Canada.

In addition, the Company today reported its Mineral Reserves and Mineral Resources as at December 31, 2025, including 19 million ounces of gold in Mineral Reserves, 19 million ounces in Measured and Indicated Mineral Resources exclusive of Mineral Reserves, and 11 million ounces in Inferred Mineral Resources.

For a detailed summary by asset, refer to the Company’s Annual Information Form, which will be available for download later today on SEDAR+ at www.sedarplus.ca, on EDGAR at www.sec.gov/edgar and on Equinox Gold’s website at www.equinoxgold.com. *All dollar figures are in United States*

dollars unless otherwise noted.

Darren Hall, Chief Executive Officer, commented:

“Our immediate focus at Greenstone is executing the ramp-up and achieving sustained nameplate milling capacity of 27,000 tonnes per day. Delivering consistent performance at this level will establish Greenstone as a cornerstone asset within our portfolio.

“At this throughput rate, the updated technical report outlines an operation expected to average approximately 320,000 ounces of gold annually over the next decade, representing a strong outcome for a long-life asset located in a Tier 1 jurisdiction.

“Once we achieve stable nameplate performance, we see additional opportunities to further optimize the operation and create value.

“These include increasing mill throughput toward 30,000 tonnes per day, incorporating higher-grade underground resources into future mine plans, and advancing near-mine and regional exploration targets across our large, 400 km² land package.

“With 1.6 million ounces of Measured and Indicated Resources and 1.2 million ounces of Inferred Resources delineated in the underground deposit, and an additional 1.1 million ounces of Indicated Resources identified to date on the broader land package, we believe there is meaningful potential to enhance grades, extend mine life and potentially increase annual production over time.

“At Valentine, the updated technical report highlights significant benefits from the planned Phase 2 expansion. Following completion of Phase 2 construction, which is targeted for H2 2028, throughput is expected to increase to approximately 13,700 tonnes per day (5.0 Mtpa), and annual gold production is expected to average approximately 223,000 ounces per year for the subsequent ten years.

“We see additional strong opportunities to extend mine life and further enhance the value of this asset. Ongoing delineation efforts at the Frank Zone have the potential to evolve into a fourth open pit, and we are advancing drilling this year to better define that opportunity.

“Combined with ongoing exploration across the broader, 320 km² land package and future throughput optimization potential, Valentine represents a long-life, scalable production platform capable of delivering sustainable growth well beyond the current mine plan.

“Additionally, we remain focused on unlocking further value

through the growth and enhancement of our overall Mineral Reserves and Mineral Resources, supported by a robust \$70 to \$80 million exploration budget for 2026.”

Equinox Gold Advances Canadian Operations with First Ore Processed at the Valentine Gold Mine and Leadership Additions at the Greenstone Gold Mine

[Download](#)

Equinox Gold Corp. (TSX: EQX) (NYSE American: EQX) (“Equinox Gold” or the “Company”) is pleased to provide an update on its cornerstone Canadian mining operations, the Valentine Gold Mine (“Valentine”) located in Newfoundland & Labrador, and the Greenstone Gold Mine (“Greenstone”) located in northern Ontario.

**Darren Hall, Chief Executive Officer of Equinox Gold,
commented:**

“I am pleased to announce that our Valentine Gold Mine has begun processing ore through its 2.5-million-tonne-per-annum facility.

“We expect to pour first gold within the next month, marking another important milestone for Equinox Gold as we bring our second cornerstone Canadian mine into production (see [video here](#)).

“With a skilled operating team, with proven commissioning expertise, established systems and procedures and critical spares in place, the team is well positioned to ramp-up to nameplate capacity during Q2 2026.

“At that point, Valentine is expected to produce between 175,000 and 200,000 ounces of gold annually for the first 12 years of its 14-year reserve life.

“Equinox Gold is entering a pivotal phase of growth, with production and cash flow expected to increase meaningfully as Valentine ramps up and Greenstone approaches nameplate capacity.

“At Greenstone, the ramp-up continues to advance, supported by new leadership and technical expertise. Bryan Wilson has been appointed Vice President of Operations and will start on September 3, bringing more than 37 years of experience in both open pit and underground mining to the team.

“Bryan has a proven track record of safe, efficient, and profitable operations and is widely recognized as a change agent who drives performance improvements while upholding the highest safety standards.

“Bryan was most recently Vice President of Operations at IAMGOLD’s Côté Gold Mine, where he led the transformation of the operation through commissioning, optimization, and into steady-state delivery.

“We also welcomed Roger Souckey as Director, External Relations. With 35 years of global mining experience at both the site and corporate levels, Roger will lead stakeholder and community relations at Greenstone.

“The Company has also strengthened its executive leadership team with the appointment of Daniella Dimitrov as Executive Vice President of Sustainability, People & Strategy.

“With more than 25 years of leadership experience in strategy, finance, and governance, Daniella adds valuable expertise that will advance our vision of building a top-quartile gold producer anchored by long-life Canadian mines.

“Additionally, holders of the Company’s 2020 Convertible Notes elected to convert their notes into common shares at the conversion price of US\$6.50 per share and on August 18, 2025, Equinox Gold issued 21.4 million shares to fully settle the US\$139.2 million principal amount of the notes. The retirement of the 2020 Convertible Notes marks another step in the Company’s objective to reduce overall leverage.”

**Calibre Mining Reports 2024
Financial Results; 2025 Set to be a
Transformational Year as the Multi-
Million Ounce Valentine Gold Mine,
Canada Advances to First Gold**

During Q2, 2025

02/19/2025

VANCOUVER, British Columbia, Feb. 19, 2025 (GLOBE NEWSWIRE) –**Calibre Mining Corp.** (TSX: CXB; OTCQX: CXBMF) (“Calibre” or the “Company”) announces financial and operating results for the three months (“Q4”) and full year ended December 31, 2024 (“FY 2024”).

Consolidated Q4 and FY 2024 filings can be found at www.sedarplus.ca and on the Company’s website at www.calibremining.com. All figures are expressed in U.S. dollars unless otherwise stated.

Darren Hall, President and Chief Executive Officer of Calibre, stated:

“Calibre delivered a record Q4 consolidated gold production of 76,269 ounces, and full year 2024 production of 242,487 ounces, surpassing the revised 2024 annual production guidance.

“As of February 15, 2025, the year is off to a strong start with consolidated production trending 15% higher than budget and cash increased to \$161 million, a 23% increase over December 31, 2024.

“2025 is set to be a transformative year for Calibre, with the Valentine Gold Mine on track for first gold during the second quarter.

“We hired a high quality, experienced operating team through 2024 and are working with Reliable Controls Corporation to conduct pre-commissioning and commissioning to ensure operational readiness.

“In addition, all necessary equipment and resources for timely production are on site. Based on the 2022 Feasibility Study, Valentine’s life-of-mine average production is expected to be approximately 195,000 ounces per year, with the process plant expected to reach 2.5 Mpta by the end of 2025.*

“The exploration potential at Valentine is incredibly exciting. We have seen continued success since the discovery made southwest of the Leprechaun deposit in late 2024 with initial drill results returning grades more than 40% above Mineral Reserve grade.

“As we progress during 2025, we are preparing for the largest pure exploration program in Valentine’s history.

“With tens of kilometres of the Valentine Lake Shear Zone and the Parallel Northwest Contact still untested, we remain optimistic about the significant upside potential as we advance efforts to establish this district as a new gold camp.

“With strong gold prices, consistent operating performance, successful exploration results and Valentine on track to enhance diversification and growth, I am confident that we will continue delivering superior value for our shareholders.”

Calibre Expands Mineralization to Surface at Frank Zone, Up-Plunge of 2024 Results at the Valentine Gold Mine, Newfoundland & Labrador, Canada; Drilling Intercepts Include 3.08 g/t Gold over 48.2 Metres, 1.62 g/t Gold over 44.6 metres,

1.94 g/t Gold over 36.4 Metres and 3.47 g/t Gold over 12.6 metres; New Discovery Frank Zone Now Traced Over 1 Kilometre Along Strike and 500 Metres Deep

02/11/2025

[Download\(opens in new window\)](#)

VANCOUVER, British Columbia, Feb. 11, 2025 (GLOBE NEWSWIRE) –**Calibre Mining Corp. (TSX: CXB; OTCQX: CXBMF)** (the “Company” or “Calibre”) is pleased to announce additional discovery diamond drill results from its expanded 100,000 metre drill program at the Valentine Gold Mine (“Valentine”) located in Newfoundland & Labrador, Canada.

Previous drilling (see [news release dated November 25, 2024](#)) highlights the considerable prospectivity to the southwest of the Leprechaun Pit at the Frank Zone.

New drill results reveal shallow, broad zones of continuous mineralization, expanding the volume of high-grade gold intercepts to surface. These results align with previously released high-grade trenching and grab sample data.

All results discussed in this release are well outside of known mineral resources.

Highlights from today's release include:

- **3.08 g/t Au over 48.2 metres** Estimated True Width ("ETW") in Hole FZ-24-062;
- At surface, **97.87 g/t Au over 3.9 metres** ETW and **1.62 g/t Au over 44.6 metres** ETW including **2.58 g/t Au over 22.8 metres** ETW and 10.11 g/t Au over 0.9 metres ETW in Hole FZ-24-064;

Darren Hall, President and Chief Executive Officer of Calibre, stated:

"Follow-up discovery drilling at the Frank Zone, located one kilometre southwest of reported Mineral Resources, continues to return broad intervals of gold mineralization.

"Importantly, drilling has now traced mineralization to surface, highlighting the potential for another open pit.

"These new intercepts geologically align with ore from the Marathon, Berry and Leprechaun open pits. While exploration of the Frank Zone is still in its early stages, current data indicates that the zone remains open to the southwest and to the north and has now been traced for over one kilometre along strike and to a depth of approximately 500 metres.

"Historically, drilling at Valentine has mainly focused on the 8-kilometre stretch from Leprechaun to Marathon Pit,

along the Valentine Lake Shear Zone. This 32 km long structure remains highly prospective for discovering additional gold resources and represents only a small fraction of the broader 250 km² land package.

“With construction progressing on plan, Valentine remains on schedule to achieve first gold in Q2 of this year, positioning Calibre into a mid-tier gold producer with annual production of 450,000 to 500,000 ounces.”

Calibre Adds 30% Gold at Leprechaun

Calibre Mining (TSX: CXB)

Announced additional ore control reverse circulation drill results from its Leprechaun open pit at Valentine Gold Mine in Newfoundland and Labrador, Canada.

The Company has completed 21,500 metres of RC drilling on a 9 x 9 metre spacing.

	Calibre Mining	TSX: CXB

Leprechaun Open Pit Ore Control Drilling Increases Confidence and adds 30% Contained Gold versus the 2022 Reserve Model At the Valentine Gold Mine in Newfoundland and Labrador, Canada

02/05/2025

VANCOUVER, British Columbia, Feb. 05, 2025 (GLOBE NEWSWIRE) – **Calibre (TSX: CXB; OTCQX: CXBMF)** (“Calibre” or the “Company”) is pleased to announce additional ore control reverse circulation (“RC”) drill results from its Leprechaun open pit (“Leprechaun”) at Valentine Gold Mine (“Valentine”) in Newfoundland and Labrador, Canada.

The Company has completed 21,500 metres of RC drilling on a 9 x 9 metre spacing. The results of this drilling demonstrate 29% more ore tonnes at a 1% higher grade for 30% more gold than the comparable area in the 2022 Mineral Reserve model at an ore-waste cut-off of 0.38 g/t gold.

Darren Hall, President and Chief Executive Officer of Calibre, stated:

“I am very encouraged to report that Calibre’s Leprechaun open pit ore control drilling confirms grade and adds tonnage resulting in a 30% increase in contained gold compared to the Mineral Reserve.

“Importantly, the grade distribution indicates that applying a higher cut-off grade will result in processing higher grade material.

“At a 0.70 g/t cutoff, the reserve model estimated 660kt at 2.02 g/t whereas the ore control model, for a similar tonnage, results in 18% higher grade by increasing the cutoff to 1.0 g/t.

“This is an extremely positive result which could result in increased metal production while simultaneously extending mine life.

“I am also pleased to report that Valentine construction is going well, with strong progress on structural, mechanical, and piping activities in the grinding, reagents and gold room areas.

“Additionally, we have advanced pre commissioning at the crusher and various e-rooms. There are no changes to Valentine’s fully funded initial project capital cost of C\$744 million and we remain on track to deliver first gold during Q2 2025.”

Calibre Discovers Significant Gold Mineralization 1,000 metres Beyond the Valentine Gold Mine Resource, Newfoundland & Labrador, Canada; Drilling Intercepts Include 2.43 g/t Gold over 172.8 metres, 2.12 g/t Gold over 95.4 metres and 2.26 g/t Gold over 78.3 metres

[View the full news release PDF](#)

VANCOUVER, British Columbia, Nov. 25, 2024 (GLOBE NEWSWIRE) – **Calibre Mining Corp.** (TSX: CXB; OTCQX: CXBMF) (the “Company” or

“Calibre”) is pleased to announce initial discovery and resource expansion diamond drill results from its Valentine Gold Mine (“Valentine”) located in Newfoundland & Labrador, Canada.

The program, part of the expanded 100,000 metre drilling initiative ([see News Release dated July 15, 2024](#)), is focused on discovering new gold mineralization beyond the known resources on the 250 km² property.

Launched earlier this year, the drilling highlights ([see News Release dated June 5, 2024](#)) the vast potential that exists outside of the three pit 2022 Feasibility Studyⁱ, which includes a total of 64.6 Mt grading 1.90 g/t gold containing 3.95 Moz of Measured and Indicated Resources and 20.7 Mt grading 1.65 g/t gold containing 1.10 Moz of Inferred Resources.

These resources are hosted across only 8 km of the highly prospective 32 km long main Valentine Lake Shear Zone (VLSZ).

Drill results include numerous intercepts with visible gold and both high grade intersections and broad zones of continuous mineralization have been identified in several holes, all of which are located outside of known mineral resources.

Highlights from the Frank Zone drill program southwest of the Leprechaun pit include:

- 2.43g/t Au over 172.8 metres Estimated True Width (“ETW”) including 3.84g/t Au over 90.9 metres ETW in Hole FZ-24-048;

- 2.12g/t Au over 95.4 metres ETW in Hole FZ-24-046;
- 2.26g/t Au over 78.3 metres ETW in Hole FZ-24-040;

Darren Hall, President and Chief Executive Officer of Calibre, stated:

“We acquired the 5-million-ounce Valentine Gold Mine in Canada primarily for its near-term production of approximately 200,000 ounces per year for the first 12 years of its 14-year reserve life.”

“With construction 85% complete, the funded project remains on schedule for first gold in Q2 2025.”

“Successfully delivering Valentine will transform Calibre into a mid-tier gold producer with annual production of

“Since our initial due diligence in 2024, the team has been extremely excited by the highly prospective district potential of the Valentine Gold Mine property, which has a similar geologic setting to the prolific Val d’Or and Timmins camps in the Abitibi gold belt.”

“These initial drill results highlight the significant upside

potential for further discoveries and resource expansion. Holes FZ-24-048, 2.43 g/t gold over 172.8 metres, and FZ-24-046, 2.12 g/t gold over 95.4 metres, are very encouraging given the grades and widths, with mineralization importantly remaining open laterally, vertically and up-dip.

“In just a few months, we’ve discovered broad zones of gold mineralization up to 1,000 metres southwest of the Leprechaun open pit with grades more than 40% above-reserve-grade.

“These results are located proximal to the mill, and outside of the mineral resource, which strengthens our confidence that Valentine’s 250 km² land package represents a new gold district.

“Furthermore, ongoing drilling northeast of our Marathon deposit is uncovering promising opportunities and identifying several new, high priority targets for exploration.

“We are excited about what lies ahead and look forward to sharing more information as we continue the expanded multi-rig drill program and progress construction completion.”

Tom Gallo, Senior Vice President

Strategy and Growth of Calibre, stated:

“The anticipated discovery potential of the orogenic gold setting of the Valentine Gold Mine property is highlighted by today’s drill results.

“Hole FZ-24-040 sits approximately 400 metres along strike to the southwest of the Leprechaun open pit followed by another 450 metre step out in Hole FZ-24-046 and a further 150 metres in Hole FZ-24-048.

“These three intercepts define a 1,000- metre corridor outside of our present mineral resource which is now being defined for future delineation drilling.”

CALIBRE ANNOUNCES RECEIPT OF THE FEDERAL ENVIRONMENTAL ASSESSMENT APPROVAL FOR THE BERRY PIT AT THE VALENTINE GOLD MINE, NEWFOUNDLAND & LABRADOR, CANADA

[View PDF](#)

VANCOUVER, British Columbia, Aug. 06, 2024 (GLOBE NEWSWIRE) –**Calibre Mining Corp.** (TSX: CXB; OTCQX: CXBMF) (the “Company” or “Calibre”) is pleased to announce that the Honorable Steven Guilbeault, Minister of Environment and Climate Change Canada, has approved the addition of a third open pit, the Berry Deposit (“Berry Pit”), at its 100% owned Valentine Gold Mine (“Valentine”).

In August 2023, an environmental assessment update was submitted to the Impact Assessment Agency of Canada (“IAAC”) regarding proposed changes to Valentine to include the Berry Pit, and associated infrastructure changes.

Following IAAC’s thorough analysis of the submitted update, including the results of consultation with Indigenous groups, communities, stakeholder organizations, and reviewing the

results of IAAC's public comment process, Minister Guilbeault signed an Amended Decision Statement approving the addition of the Berry Pit.

Darren Hall, President and Chief Executive Officer of Calibre, stated:

"I am pleased to announce that we have obtained Federal Environmental approval for the development of the Berry Pit at Valentine.

"With this approval and the recent issuance of Provincial mining and surface leases for Berry and associated infrastructure, we now have the major approvals required for the three-pit mine plan included in the 2022 Feasibility Study.

"Since acquiring Valentine in January, we have progressed engineering to 98%, advanced construction from 50% to 77%, and employed an experienced operations team, positioning us to deliver first gold in Q2, 2025."
