

# Initiating Coverage of Errington Metals

## Errington Metals (TSX.V EM)

Errington is an interesting company located in Sudbury Ontario, with an early resource of 13m tons of copper at a grade of 4% Copper equivalent.

Management have skin in the game, and previous experience of delivering shareholder value.

## **City Investors Circle Initiating Coverage of Errington Metals**

**Errington Metals (TSX.V: EM)** is an interesting company located in Sudbury Ontario, with an early resource of 13m tons of copper at a grade of 4% Copper equivalent.

Management have decent skin in the game, and previous experience of delivering shareholder value.

## **Highlights**

# Unlocking High-Grade Critical Metals in the Sudbury Basin

**Errington Metals** is redefining the exploration landscape in Canada's most prolific mining district.

Sudbury is globally renowned for copper-nickel-PGE deposits, but its massive, high-grade VMS potential has remained largely ignored, and hence underexplored..

Backed by a technically seasoned management team, board and advisors with exceptional track records of building companies, Errington is aggressively advancing its flagship Sudbury Basin Project to deliver superior long-term value for our shareholders and source metals for the global green transition.

The asset has over twice the grade of Foran, and superior infrastructure and location.

## Management

David Harquail is ex Franco Nevada, and Dan Myersen has just sold Foran for C\$3.5 billion.

Management own over 22% of the company.

This week the company released good drill results, and a new campaign is planned to try and reach an asset of 20 million tons at around 4% copper equivalent.

I am planning to make an initial investment before the new round of drill results are announced.

**City Investors Circle is based in the financial district in  
the City of London**

We present interesting and exciting junior mining companies listed on the ASX and TSX stock exchanges to a group of city professionals, and private investors, all of whom are active investors with a mandate to invest in junior mining companies.

Our audience is selected and invited individually to ensure interest and relevance for the presenting company.

Meetings are non deal, small group, highly focused and engaged, with a lively Q and A to follow the main presentation.

We create awareness, and maintain interest in presenting companies by disseminating their future news to our entire investor group via email, social media, and our Monthly Review newsletter.

If you wish to present to our select group of active mining

investors, please email [andrew@city-investors-circle.com](mailto:andrew@city-investors-circle.com)

<b>Location</b>	<b>Quebec, Canada</b>

# 03 Mining Drill Results Confirm VMS Deposit Environment at Horizon Project

*The sizeable prospective belt within the Horizon Project and the multiple geophysical anomalies identified by 03 Mining have provided the fundamental elements to allow for the discovery of significant VMS deposits.*

## **TSXV:OIII | OTCQX:OIIIF – 03 Mining**

TORONTO, Nov. 13, 2023/CNW/ – **03 Mining Inc. (TSXV: OIII)** (OTCQX: OIIIF) (“03 Mining” or the “Corporation”) is pleased to announce that it has received the results of the two inaugural drill holes completed over the prospective Volcanogenic Massive Sulphide (“VMS”) belt within the Horizon Project, in Val-d’Or, Québec, Canada (“Horizon” or the “Horizon Project”).

## **Highlights**

- Hole 03HR-23-001 intercepted a laminated sulphide-rich siliceous tuff containing highly anomalous base and precious metal values of up to 0.24% Cu, 0.15% Zn, 0.1 g/t Au, and 1.4 g/t Ag over 1.4 metres from 356.0 metres.
- These anomalous values are well within the range of values encountered in VMS related exhalative horizons in

other prolific belts of Abitibi like the C Contact at Noranda and the Key Tuffite at Matagami.

- The exhalative horizon in 03HR-23-001 is located along a 2.5 kilometres long chargeability induced polarization (“IP”) and magnetic anomaly contained within a bimodal (mafic-felsic) volcanic sequence reaching 14 kilometres in length and interpreted to be equivalent to the Louvicourt Group, which hosts the Louvicourt VMS deposit in the Val-d’Or district (14Mt at 3.5% Cu, 1.5% Zn, 25.9 g/t Ag and 0.9 g/t Au).
- Eight other IP anomalies have been obtained within the 14 km long volcanic sequence, all of which remain to be tested.

## **03 Mining’s President and CEO Mr. José Vizquerra commented:**

*“We are very excited about the initial results at the Horizon Project that confirm the discovery of a fertile environment supporting a highly prospective VMS deposit.*

*“VMS deposits represent some of the richest sources globally of a diverse group of strategic metals including copper, zinc, and lead. VMS deposits can also produce significant amounts of gold and silver as byproducts.*

*“The sizeable prospective belt within the Horizon Project and the multiple geophysical anomalies identified by 03 Mining have provided the fundamental elements that allow for the discovery of VMS deposits. These meaningful results create a*

*new focus of interest on the project that warrants subsequent drilling.”*
