

Western Gold Prepares For Imminent Production

[Western Gold Resources \(ASX: WGR\)](#)

Announced the execution of key pre-mining contracts supporting mobilisation and site establishment at its 100%-owned Gold Duke Project in Western Australia.

The Company has executed Letters of Award with SSH Mining to commence site establishment works, including clearing, grubbing, open pits, lay down areas and haul road delineation.

Western Gold Prepares For Imminent Production at Gold Duke

Gold Duke Project Pre Mining Works Letter of Award, DWER Approval and Mine Operator Appointed

Western Gold Resources Limited (ASX: WGR) (“WGR” or “the Company”) is pleased to announce the execution of key pre-mining contracts supporting mobilisation and site establishment at its 100%-owned Gold Duke Project in Western Australia.

The Company has executed Letters of Award with SSH Mining to commence site establishment works, including clearing, grubbing, open pits, lay down areas and haul road delineation, and has also awarded a contract to Pennigton Scott Pty Ltd for the drilling of the Bower Bird Water Bore, a critical component of early mining and Life of Mine (LOM) dust-suppression infrastructure.

These activities represent another important step in

transitioning Gold Duke from development into operational readiness, following the Board's Decision to Mine announced in December 2025

Highlights:

- Letters of Award executed with SSH Mining Australia Pty Ltd (subsidiary of SSH Group Ltd (ASX:SSH)) to commence pre-mining works at the Gold Duke Project, including clearing, grubbing and site establishment.
- Organisation of earthmoving equipment and site establishment activities underway, supporting the planned transition into mining operations.
- SSH Mining has been appointed with LGIRS as the Mine Operator as part of a Turn Key Solution for the Gold Duke Project.
- Contract executed with Pennington Scott Pty Ltd and Delta Consultancy & Drilling Services Pty Ltd for the construction of the Bower Bird Water Bore, delivering a dedicated water supply to support all mining activities and dust suppression.
- *Early works advance operational readiness and materially de-risk the planned Q1 2026 mobilisation and production schedule.*
- Activities follow the Board's Decision to Mine and represent continued execution of WGR's capital-efficient development strategy at Gold Duke.

- The Company is currently assessing the potential to increase the life of mine at Gold Duke.

Managing Director Cullum Winn commented:

“These early works mark a critical transition from planning into execution at Gold Duke.

“Commencing clearing, grubbing and site establishment, in particular open pits, waste dumps and haul roads plus water infrastructure development provides a strong foundation for mining operations and significantly de-risks our mobilisation schedule.

“Gold Duke continues to advance in line with our Decision to Mine and capital-efficient development strategy whilst also assessing options to increase the life of mine at Gold Duke.”

Western Gold Grade Control Supports Mine Decision

[Western Gold Resources \(ASX: WGR\)](#)

Reported that assay results from a further 28 RC drillholes across the Eagle South and Gold King deposits within the Gold Duke Project continue to deliver strong and consistent gold intersections, confirming the continuity of mineralisation within and beyond the Stage 1 pit designs.

WESTERN GOLD GRADE CONTROL RESULTS PROVIDE STRONG SUPPORT FOR PENDING DECISION TO MINE AT GOLD DUKE

Western Gold Resources Limited (ASX: WGR) (“WGR” or “the Company”) is pleased to report that assay results from a further 28 Reverse Circulation (RC) drillholes across the Eagle South and Gold King deposits within the Gold Duke Project located 35km southwest of Wiluna, in the Goldfields region of Western Australia continue to deliver strong and consistent gold intersections, confirming the continuity of mineralisation within and beyond the Stage 1 pit designs.

These early results reinforce the robustness of the geological model and suggest potential pit extensions and resource growth opportunities within the broader Gold Duke corridor.

With all 35,300 metres of drilling for Stage 1 now complete, the Company is advancing toward the resource model update that will underpin the Decision to Mine process.

Highlights:

- Early results from the 35,300 m grade control and infill drilling confirm the Gold Duke model’s accuracy, with early Eagle South and Gold King assays closely matching Scoping Study1 grades and validating mineralisation continuity along strike and at depth.
- Grade control drilling results reported to date have delivered high-grade, continuous intersections consistent with

modelled expectations, with better intercepts including:

Eagle South:

- 10 m @ 3.78 g/t Au from 30 m (EG00069)
- 9 m @ 3.75 g/t Au from 17 m (EG00070)
- 8 m @ 3.06 g/t Au from 18 m (EG00059)

Gold King:

- 9 m @ 1.57 g/t Au from 12 m (GK00181)
- 7 m @ 2.06 g/t Au from 18 m (EM00162)
- 5 m @ 3.99 g/t Au from 40 m (EM00070)
- The tight 5 m × 10 m drilling pattern has verified orebody continuity and grade consistency, reinforcing confidence in production, design, and cash-flow forecasts—supporting projected undiscounted pre-tax cash surpluses of A\$56M (A\$4,500/oz) to A\$97M (A\$5,500/oz)¹.
- All samples were analysed by ISO-certified labs (Nagrom and Jennings) using 50 g Fire Assay with full QA/QC.

Statistical review confirmed no bias or drift, ensuring JORC-compliant accuracy and repeatability.

- Strong correlation between new grade control and historical drilling validates geological models and pit designs, de-risking the Decision to Mine pathway and confirming continuous, mineable Stage 1 mineralisation.
- Results received for a further 28 of 1,107 holes demonstrate excellent grade continuity, with assays from the remaining ~32,550 m (~1,020 holes) to be progressively incorporated into the Resource Model Update.
- Backed by a fully funded development plan, low pre-mining capital requirements (~A\$2.6–2.8 M), and a rapid payback period (3 months), *Western Gold Resources is now poised to commence mining with strong geological confidence, proven technical validation, and outstanding leverage to record Australian gold prices, further strengthening the upcoming Decision to Mine process.*

Managing Director Cullum Winn commented:

“These results from the Gold Duke grade control drilling program mark a major technical milestone for Western Gold Resources.

“The strong correlation between new assays and our Scoping Study model confirms the robustness of the orebody and underpins the integrity of our mine design and financial forecasts.

“With a fully funded development plan, low start-up capital, and rapid payback, we are exceptionally well positioned to move into production at a time of record Australian gold prices—further strengthening the upcoming Decision to Mine process.”

Rumble Resources Report Significant Drilling Results from the Chinook Prospect at Earraheedy

Rumble Resources Limited (ASX: RTR) ("Rumble" or "the Company") is pleased to announce significant new drilling

results at the Chinook Zn-Pb-Ag-Cu Prospect located within the Earraheedy Project located 140km northeast of Wiluna, Western Australia.

The results include the most recent hole within the newly discovered high grade Kalitan Feeder Zone.

Rumble Resources management comments

“Following the Chinook Zn-Pb-Ag-Cu sulphide discovery in April 2021, broad spaced 500m x 100m scoping drilling defined a very large shallow flat lying 4.1km x 1.9km mineralised footprint that remains open in all directions.

“Later in 2021, Rumble commenced infill drilling on a 200m x 100m grid, with the impressive first assay results received from this program showcasing the potential to define a very large-scale open pit deposit with strong grade continuity and multiple large high-grade Zn-Pb core zones, as shown by our grade contouring in images 2 & 4.

“Drill hole and geophysical analysis provided the exploration team with the essential technical understanding to discover the high grade Kalitan Feeder Zone at Chinook in December 2021.

“The 2022 RC/DD drilling program will be the first to specifically define the open, 2.3km long Kalitan Feeder Zone, which continues to deliver high-grade Zn-Pb intercepts, and target other inferred high-grade Zn-Pb zones within feeder structures that are already delineated within and outside the existing Chinook mineralised footprint.

“Another recent exciting development is the interpretation of the airborne magnetics has shown the structural features that host the Chinook mineralisation including a multitude of inferred high-grade feeders and domal features, extend west of the current limit of the Chinook mineralization into the 100% owned newly granted E69/3787, host to 15km’s of strike named the Sweetwater trend.

“Rumble is in advanced stages of completing heritage surveys along the Sweetwater trend and once completed, drilling is planned to rapidly extend and define the limits of the Chinook Zn-Pb-Ag-Cu deposit and target further large-scale discoveries.”

Rumble Resources Managing Director, Mr Shane Sikora
