West Red Lake Gold Intersects 37.33 g/t Au over 2.79m and 5.26 g/t Au over 9.0m at North Austin Zone – Madsen Mine

West Red Lake Gold Mines Ltd. (TSXV: WRLG)(OTCQB: WRLGF) (“West Red Lake Gold” or “WRLG” or the “Company”) is pleased to report drill results from its 100% owned Madsen Mine located in the Red Lake Gold District of Northwestern Ontario, Canada.

This round of drill results from the Madsen Mine were all drilled from underground on the **North Austin Zone**, which represents a new area of high-grade mineralization extending

the current Madsen resource to the northeast. This program was designed to expand the North Austin zone down-plunge to the northeast.

There are three main plunge lines (ore shoots) that the team is targeting at North Austin, and the results in this press release have demonstrated down-plunge continuity on the order of 30 meters ("m") within at least one of these ore shoots.

The North Austin Zone sits adjacent to existing underground development marking it as a high caliber, near-surface target that could potentially be developed early during future mine restart and production. The North Austin Zone remains open down-plunge and along strike to the northeast and will continue to be a priority expansion target as underground drilling continues.

Shane Williams, President & CEO, stated,

"It's very encouraging to see the North Austin drilling beginning to deliver on expectations."

"Defining new areas of mineralization outside of, but adjacent to, the known deposit will continue to be a priority at Madsen and further solidifies our strategy with continuing to de-risk the asset while also taking full advantage of high-grade, near-mine organic growth opportunities."
