The purpose of this drilling was definition within South

Austin to continue building an **inventory of high-confidence ounces** for the eventual restart of production at the Madsen mine.

- The high-grade mineralization encountered near the collar (top of hole) in Holes **MM24D-07-4198-012, -014, -019, -020** and **MM24D-09-4068-003, -006, -009** and **-010** is starting to define a new, previously unrecognized footwall lens running sub-parallel to the South Austin zone. This footwall zone was initially recognized in holes **MM24D-07-4198-002** and **MM24D-07-4198-006** as described in a press release dated [April 18th](#), 2024. This new zone has now been intercepted in ten (10) holes between the historic 7 and 9 Levels and will continue to be an expansion target as drilling continues in the South Austin area.

Shane Williams, President & CEO, stated,

“The exceptional drill results highlighted in this news release really demonstrate the quality of the South Austin zone.

“We are encouraged by the very broad intercepts of mineralization averaging above 6 grams per tonne gold, which are accentuated by a number of very high-grade intervals.

“These thicker portions of South Austin could be more amenable to higher tonnage mining methods which is expected to help reduce overall mining costs.

“Furthermore, the new mineralized lens the team is defining footwall to South Austin between the historic 7 and 9 Levels is quite exciting and demonstrates the discovery potential that still exists within and adjacent to the Madsen deposit.”
