# Westgold Reports Bonanza Grade Coarse Gold Zones At Western Flanks

Perth, Western Australia, 11 September 2024: **Westgold Resources Limited** (ASX: WGX, TSX: WGX, OTCQX: WGXRF) (Westgold or the Company) is pleased to provide an update in relation to recent mining activities at the Western Flanks orebody at Beta Hunt.

## Highlights

Sediment hosted coarse gold mineralisation confirmed within Western Flanks  
– providing significant production upside potential.

Mineralisation style is consistent with the bonanza grade “Father’s Day Vein”  
– previously mined in the parallel A Zone deposit.  
Potential for similar style high grade positions within Beta Hunt – including in  
the rapidly evolving Fletcher Zone.

## Westgold Managing Director and CEO Wayne Bramwell commented:

*“Coarse gold occurrences at Beta Hunt, such as the famous “Father’s Day Vein” discovered in 2018, have to date been limited to the A Zone deposit.*

*“The confirmation of this style of mineralisation within the Western Flanks deposit not only provides increased production upside, it also indicates the potential for additional bonanza grade zones within other mineralised structures such as the Fletcher Zone.*

*“Westgold sees a much larger opportunity at Beta Hunt and across our Southern Goldfields assets, with drilling the catalyst to defining their real scale.”*
